Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Center project name: L8832
Center clone name: 601_G_24

* NOTE: This record contains 69 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will

* be preserved.

----- Summary Statistics
Sequencing vector: MJ3; M77815, 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 118139 bases at least Q40
Consensus quality: 133540 bases at least Q30
Consensus quality: 144810 bases at least Q20
Insert size: 15167; sum-of-contrigs
Quality coverage: 3.7 in Q20 bases; agarose-fp
Quality coverage: 4.0 in Q20 bases; sum-of-contrigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 22 contrigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contrigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

----- Summary Statistics
Center project name: H_MH055C06
Drafting Center: WIBR

NOTICE:

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30) ; an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPc11 human BAC library was made from the blood of one male
donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Firengen, E.,
Tateno, M., Catene, J.J. and de Jong, P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (http://www.reagen.com) or Pieter de Jong
and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

Actual start of this clone is at base position 1 of RP11-55C6;
actual end is at base position 146673 of RP11-55C6.

FEATURES

The sequence of AC025849 has been incorporated into AC093755.

----- Genome Center -----

Center: NIH Intramural Sequencing Center
 Center code: NISC
 Web site: <http://www.nisc.nih.gov>
 Contact: nisc_zoo@nhgri.nih.gov
 ----- Project Information -----
 Center project name: dbz
 Center clone name: 299K15

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies; the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics -----

Sequencing vector: plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 179761 bases at least Q40
 Consensus quality: 180204 bases at least Q30
 Consensus quality: 180400 bases at least Q20
 Insert size: 168000; agarose-fp
 Insert size: 180532; sum-of-contigs
 Quality coverage: 11.57x in Q20 bases; agarose-fp
 Quality coverage: 10.76x in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.

COMMENT

of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA
 On May 10, 2003 this sequence version replaced gi:25008716.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/ret/>). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a contig-scaffold). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: GNL

Center clone name: CH230-158116

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 193830 bases at least Q40

Consensus quality: 196476 bases at least Q30

Consensus quality: 197962 bases at least Q20

Estimated insert size: 210320; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently

consists of 3 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

1 208035: contig of 208035 bp in length

* 208036 208135: gap of unknown length

* 208136 209483: contig of 1348 bp in length

* 209484 209583: gap of unknown length

* 209584 211153: contig of 1570 bp in length.

            Primer A: None
            Primer B: None
            STS size: 819
            Protocol:
            WGS-discovery: Paired-end low-coverage whole genome shotgun reads
            were generated from 12951/Syrm, CH/Ref, and BALB/cByJ. The WGS
            reads were placed uniquely on the MGSVC3 C57BL/6J assembly and SNP
            detection was carried out by SSAHA-SNP. 225,000 reads were
            annotated
            as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J
            and the strain from which the particular read came. The validation
            rate for these SNPs was estimated at approximately 98%.

COMMENT

 During sequence assembly data is compared from overlapping clones.
 Where differences are found these are annotated as variations
 together with a note of the overlapping clone name. Note that the
 variation annotation may not be found in the sequence submission
 corresponding to the overlapping clone, as we submit sequences with
 only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone or more than one M13 subclone; and the
 assembly was confirmed by restriction digest, except on the rare
 occasion of the clone being a YAC.
 The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WormPeP; Information
 on the WormPeP database can be found at
 http://www.sanger.ac.uk/Projects/C_elegans/wormpep/Clone-derived
 zebrafish pUC subclones occasionally display inconsistency over the
 length of mononucleotide A/T runs and conserved TA repeats. Where
 this is found the longest good quality representation will be
 submitted.
 Repeat names beginning 'Dr' were identified by the Recon repeat
 discovery system (Zhirony Bao and Sean Eddy, submitted), and those
 beginning 'drr' were identified by Rick Waterman (Stephen Johnson
 lab, WashU). For further information see
 http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-116M9
 is from a CHORI-211 BAC library
 VECTOR: pTRBAC2.1.

 ----- Project Information
 Center project name: ZH36J8
 ----- Summary Statistics
 Assembly program: XGAP4; version 4.5
 Chemistry: Dye-terminator; 100% of reads

Consensus quality: 94801 bases at least Q40
Consensus quality: 95167 bases at least Q30
Consensus quality: 95524 bases at least Q20
Insert size: 96229; sum-of-contigs
Insert size: 104769; 4.4% error; agarose-fp
Quality coverage: 8.92% in Q20 bases; sum-of-contigs Quality
coverage: 8.29% in Q20 bases; agarose-fp

NOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

1 3956: contig of 3956 bp in length
* 3957 4056: gap of 100 bp
* 4057 21454: contig of 17398 bp in length
* 21455 21554: gap of 100 bp
* 21555 29844: contig of 8290 bp in length
* 29845 32939: contig of 2995 bp in length
* 32940 33039: gap of 100 bp
* 33040 44060: contig of 11021 bp in length
* 44061 44160: gap of 100 bp
* 44161 96729: contig of 52569 bp in length.

 Direct Submission
 Submitted (22-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
 COMMENT On Sep 22, 2002 this sequence version replaced gi:22772348.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Project Information

Center project name: GASD

Center clone name: CH230-4B3

----- Summary Statistics

Assembly program: Phrap; version 0.990329

Consensus quality: 241208 bases at least Q40

Consensus quality: 243075 bases at least Q30

Consensus quality: 244806 bases at least Q20

Estimated insert size: 270965; sum-of-contigs estimation

Quality coverage: 4x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)

* NOTE: This sequence may represent more than one clone.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 7 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

* 1 340986: contig of 340986 bp in length

* 340987 341086: gap of unknown length

* 341087 344539: contig of 3453 bp in length

* 344540 344639: gap of unknown length

* 344640 349127: contig of 4488 bp in length

* 349128 349227: gap of unknown length

* 349228 361781: contig of 12554 bp in length

* 361782 361881: gap of unknown length

* 361882 363463: contig of 1582 bp in length

* 363464 363563: gap of unknown length

* 363564 364872: contig of 1309 bp in length

* 364873 364972: gap of unknown length

* 364973 366202: contig of 1230 bp in length.

* Location/Qualifiers

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WormPep; Information
on the WormPep database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormPep
Zebrafish PUC subclones occasionally display inconsistency over the
length of mononucleotide A/T runs and conserved TA repeats. Where
this is found the longest good quality representation will be
submitted.
Repeat names beginning 'Dr' were identified by the Recon repeat
discovery system (Zhirong Bao and Sean Eddy, submitted), and those
beginning 'drr' were identified by Rick Waterman (Stephen Johnson
lab, WashU). For further information see
http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml
CH211-110P13 is from a CHOR1-211 BAC library

----- Summary Statistics -----
Sequencing vector: p13; 71%
Sequencing vector: plasmid; 29%
Chemistry: Dye-terminator Big Dye; 29% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 16631 bases at least Q40
Consensus quality: 168579 bases at least Q30
Consensus quality: 169265 bases at least Q20
Insert size: 180000; agarose-fp
Insert size: 171323; sum-of-contigs
Quality coverage: 6.09 in Q20 bases; sum-of-contigs
Quality coverage: 6.45 in Q20 bases; sum-of-contigs
----- NOTE: This is a 'working draft' sequence. It currently
* consists of 16 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1 2233: contig of 2233 bp in length

TITLE
 JOURNAL
 COMMENT

All repeats were identified using RepeatMasker:
 Smit, A.F.A. & Green, P. (1996-1997)
<http://ftp.genome.washington.edu/RM/RepeatMasker.html>

----- Genome Center

Center: Whitehead Institute/ MIT Center for Genome Research

Center code: MIBR

Web site: <http://www-seq.wi.mit.edu>

Contact: sequence_submissions@genome.wi.mit.edu

----- Project Information

Center project name: L10560

Center clone name: 344.E.7

----- Summary Statistics

Sequencing vector: Plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.960731
 Consensus quality: 175856 bases at least Q40
 Consensus quality: 178964 bases at least Q30
 Consensus quality: 179890 bases at least Q20
 Insert size: 182000; agarose-fp
 Insert size: 180357; sum-of-contrigs
 Quality coverage: 5.5 in Q20 bases; agarose-fp
 Quality coverage: 5.6 in Q20 bases; sum-of-contrigs

* NOTE: This is a 'working draft' sequence. It currently
 * consists of 9 contrigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contrigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

```

1      584: contrig of 584 bp in length
*      585      684: gap of 100 bp
*      685      2288: contrig of 1604 bp in length
*      2289      2388: gap of 100 bp
*      2389      4654: contrig of 2266 bp in length
*      4655      4754: gap of 100 bp
*      4755      87524: contrig of 82770 bp in length
*      87525      87624: gap of 100 bp
*      87625      97410: contrig of 9786 bp in length
*      97411      97510: gap of 100 bp
*      97511      107863: contrig of 10353 bp in length
*      107864      107963: gap of 100 bp
*      107964      124764: contrig of 16801 bp in length
*      124765      124864: gap of 100 bp
*      124865      176131: contrig of 51267 bp in length
*      176132      176232: gap of 100 bp
*      176232      181137: contrig of 4906 bp in length.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Zebrafish pUC subclones occasionally display inconsistency over the
length of mononucleotide A/T runs and conserved TA repeats, where
this is found the longest good quality representation will be
submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat
discovery system (Zhifeng Bao and Sean Eddy, submitted), and those
beginning 'dir' were identified by Rick Waterman (Stephen Johnson
lab, WashU). For further information see
http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-245C12
is from a Zebrafish BAC library
VECTOR: pIndigoBAC-5.

Summary Statistics
Center project name: M_BA0003B20

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence

from more than one subclone, and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

COMMENT

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; SW; SWISSPROT; Tr; TREMBL; Wp; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived Zebrafish cDNA subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-94J16 is from a Zebrafish BAC library

 TITLE Direct Submission
 JOURNAL Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT

On Jun 29, 2005 this sequence version replaced gi:67514866.
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rac/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Project Information

Center project name: FHTB

Center clone name: CH240-12515

Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 203030 bases at least Q40

Consensus quality: 205410 bases at least Q30

Consensus quality: 207269 bases at least Q20

Estimated insert size: 206505; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docx/genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently

consists of 22 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
----- Summary Statistics
Center project name: M_BA033920

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e. phred quality
>30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone, fosmid clone or direct clone walk sequence.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to obtain the consensus sequence. The
assembly was confirmed by restriction digest.
This finishing standard has slightly changed from the previous
Human standard. Specifically, standards for regions of low sequence
complexity (such as dinucleotide repeats and small unit tandem
repeats) have been relaxed. These regions are very prevalent in the
mouse genome, and the return on extended finishing efforts is
minimal.
If a sequence meets the criteria of the above statement, it needs
no comments or tags. If the criteria are not met, such as ambiguous
bases, then the region is duly annotated.

MAPPING INFORMATION:
This sequence was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The BAC library has been constructed by Kazuhiro Oseegawa and
Mitsuko Tateo in the laboratory of Pieter de Jong
(http://www.chori.org) from female C57BL/6J mouse kidney and/or
brain genomic DNA. The clone and detailed information can be
obtained from Research Genetics, Inc. (http://www.tegen.com) or
Pieter de Jong and coworkers at http://www.chori.org

This sequence is the entire insert of the clone.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (11-OCT-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Oct 9, 2002 this sequence version replaced gi:21737974.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Project Information
Center project name: QDBA
Center clone name: CH230-266P1
----- Summary Statistics
Assembly program: Phrap, version 0.990329
Consensus quality: 167000 bases at least Q40
Consensus quality: 170488 bases at least Q30
Consensus quality: 172720 bases at least Q20
Estimated insert size: 169991; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Direct Submission
Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 9, 2003 this sequence version replaced gi:24942366.
The sequence in this assembly is a combination of BAC based reads

```

and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Web site: <http://www.hgsc.bcm.tmc.edu/>Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: GARZ

Center clone name: CH230-4A9

----- Summary Statistics

Assembly program: Atlas;

Consensus quality: 216693 bases at least Q40

Consensus quality: 218832 bases at least Q30

Consensus quality: 220333 bases at least Q20

Estimated insert size: 227307; sum-of-contigs estimation

Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

----- NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 224364: contig of 224364 bp in length.

 TITLE Direct Submission
 JOURNAL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center
 Center: Baylor College of Medicine
 Center code: BCM
 Web site: <http://www.hgsc.bcm.tmc.edu/>
 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information
 Center project name: GKN
 Center clone name: CH230-3K20
 ----- Summary Statistics
 Assembly program: Atlas 3.0;
 Consensus quality: 254594 bases at least Q40
 Consensus quality: 256593 bases at least Q30
 Consensus quality: 257885 bases at least Q20
 Estimated insert size: 269020; sum-of-contigs estimation
 Quality coverage: 8x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
 * NOTE: This sequence may represent more than one clone.
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 1 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 1 263479: contig of 263479 bp in length.

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
XX useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1412; 245bp; English.
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
XX acid sequences from mouse and human (ADA01482-ADA03094), and to
XX recombinant carcinoma associated proteins (CAP) encoded by them. The
XX invention also encompasses expression vectors and host cells comprising a
XX CA nucleic acid, a polypeptide (especially an antibody) that specifically
XX binds to the protein, and a biochip comprising CA nucleic acid or
XX fragments thereof. The sequences of the invention were identified using
XX oncogenic retroviruses, which insert into the genome of the host organism
XX at random. Many of these do not carry transduced host oncogenes or
XX pathogenic trans-acting viral genes, meaning that cancer incidence is a
XX direct consequence of the effects of proviral integration into host
XX protooncogenes. The CA nucleic acid sequences can be used to diagnose
XX carcinoma (especially breast cancer, prostate cancer, lymphoma or
XX leukemia) or a propensity to carcinoma by determination of the sequence
XX of a CA gene, or by determination of CA gene expression in particular
XX tissues. CA nucleic acid, proteins and antibodies are also useful as
XX therapeutic agents and in screening and evaluating drug candidates. The
XX present sequence represents a specifically claimed human CA nucleic acid
XX sequence of the invention. Note: The complete sequence data for this
XX patent did not form part of the printed specification, but was obtained
XX in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences.

 PT New carcinoma associated gene or protein, useful for preparing a
 PT composition for diagnosing or treating carcinoma e.g., leukemia or
 PT lymphoma.
 XX
 PS Claim 1; SEQ ID NO 160; 29pp; English.
 XX
 CC The invention relates to new recombinant nucleic acids. The invention
 CC also relates to a host cell comprising a recombinant nucleic acid or
 CC expression vector, an expression vector comprising a recombinant nucleic
 CC acid, a recombinant protein, a method of screening for drug candidates, a
 CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
 CC method of screening for a bioactive agent capable of modulating the
 CC activity of a CAP, a method of evaluating the effect of a candidate
 CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
 CC the activity of a CAP, a method of treating carcinomas, a method of
 CC neutralizing the effect of a CAP and a method of diagnosing carcinoma or

propensity to carcinoma. A method of evaluating the effect of a candidate carcinoma drug comprises administering the drug to a patient, removing a cell sample from the patient and determining alterations in the expression or activation of a gene comprising the nucleotide sequence. A method of diagnosing carcinoma comprises determining the expression of one or more genes comprising the nucleic acid sequence in a first tissue type of a first individual and comparing the expression of the gene from a second normal tissue type from the first individual or a second unaffected individual, where a difference in the expression indicates that the first individual has carcinoma. A method of inhibiting the activity of a CAP comprises binding an inhibitor to the CAP. Treating carcinomas comprises administering to a patient an inhibitor of CAP. Neutralising the effect of a CAP comprises contacting an agent specific for the CAP. The polypeptide specifically binds to the protein encoded by the nucleic acid. It comprises an antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acids are useful for preparing a composition for diagnosing or treating carcinoma e.g., leukemia or lymphoma. This sequence represents a human carcinoma associated (CA) nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

XX New isolated cancer-associated polynucleotides and polypeptides useful
XX PT for diagnosing, preventing or treating cancers, especially lymphoma and
XX PT leukemia, or in screening for agents that modulate cancer.
XX
XX Claim 16; SEQ ID NO 16; 166bp; English.

The present invention describes an isolated cancer associated (CA) nucleic acid (1). Also described: (1) an expression vector comprising (1) a host cell comprising (1) or the expression vector; (3) a microarray for detecting a CA nucleic acid; (4) an isolated cancer associated protein (CAP) polypeptide, encoded within an open reading frame of a CA sequence; (5) an isolated antibody, or its antigen binding fragment, that binds to the above polypeptide; (6) a hybridoma that produces the above monoclonal antibody; (7) a pharmaceutical composition comprising the above antibody and a pharmaceutical excipient; (8) a kit for detecting cancer cells, comprising the (monoclonal) antibody described above; (9) methods for diagnosing cancer or for detecting the presence or absence of cancer cells in an individual; (10) a method for inhibiting growth of cancer cells in an individual; (11) a method for delivering a therapeutic agent to cancer cells in an individual; (12) an electronic library comprising the above polynucleotide or polypeptide, or their fragments; (13) methods of screening for anticancer activity or for a bioactive agent capable of modulating the activity of a CAP; (14) methods for detecting cancer associated with expression of a polypeptide in a test cell sample, or with the presence of an antibody in a test serum sample; (15) a method for treating cancer; and (16) a method for inhibiting the expression of CA gene in a cell. The CA sequences have cytostatic activity, and can be used in vaccines, and in gene therapy. The composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and leukaemia. They may also be used in screening for agents that modulate cancer. The present sequence represents a cancer associated gene genomic DNA sequence, which is used in the exemplification of the present invention.

XX Nucleic acid array useful for detecting cancer associated nucleic acid,
XX PT comprises two or more nucleic acid probes.
XX
XX
XX Disclosure; SEQ ID NO 235; 199bp; English.

XX The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents human cancer-associated genomic DNA of
CC the invention.

PS Claim 14; SEQ ID NO 1519; 577bp + Sequence Listing; English.
XX
CC The invention relates to identifying a stress condition to which a plant
CC cell has been exposed, comprising: (a) contacting nucleic acid
CC representative of expressed polynucleotides in the plant cell with an
CC array or probes representative of the plant cell genome; and (b)
CC detecting a profile of expressed polynucleotides in the plant cell
CC characteristic of a stress response. The method is useful in the
CC production of transgenic plants, cells and seeds and in producing plants

```

CC with increased tolerance to abiotic stress. The present sequence is that
 CC of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used
 CC in methods of the invention. Note: The sequence data for this patent is
 CC not represented in the printed specification, but is based on sequence
 CC information supplied to Derwent by the European Patent Office

New recombinant nucleic acid encoding carcinoma associated protein,
 useful for preparing compositions for treating carcinomas.

Claim 1; SEQ ID NO 1013; 245pp; English.

The invention relates to recombinant carcinoma associated (CA) nucleic
 acid sequences from mouse and human (ADA01482-ADA03094), and to
 recombinant carcinoma associated proteins (CAP) encoded by them. The
 invention also encompasses expression vectors and host cells comprising a
 CA nucleic acid, a polypeptide (especially an antibody) that specifically
 binds to the protein, and a biochip comprising CA nucleic acid or
 fragments thereof. The sequences of the invention were identified using
 oncogenic retroviruses, which insert into the genome of the host organism
 at random. Many of these do not carry transduced host oncogenes or
 pathogenic trans-acting viral genes, meaning that cancer incidence is a
 direct consequence of the effects of proviral integration into host
 protooncogenes. The CA nucleic acid sequences can be used to diagnose
 leukaemia (especially breast cancer, prostate cancer, lymphoma or
 leukaemia) or a propensity to carcinoma by determination of the sequence
 of a CA gene, or by determination of CA gene expression in particular
 tissues. CA nucleic acids, proteins and antibodies are also useful as
 therapeutic agents and in screening and evaluating drug candidates. The
 present sequence represents a specifically claimed murine CA nucleic acid
 sequence of the invention. Note: The complete sequence data for this
 patent did not form part of the printed specification, but was obtained
 in electronic format directly from WIPO at

ftp.wipo.int/pub/published_pct_sequences.

Morris DW, Engelhard EK;

WPI; 2003-239337/23.

Claim 1; SEQ ID NO 61; 2304pp; English.

The invention relates to a novel recombinant nucleic acid comprising a
 nucleotide sequence selected from any of the 660 sequences fully defined
 in the specification. A polynucleotide of the invention has cytostatic
 activity, and may have a use in gene therapy, or in a vaccine. The
 recombinant nucleic acids and polypeptides are useful for treating
 CC carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
 CC sarcomas. The present sequence represents a mouse gene of the invention.

 XX XX
 PS This invention relates to novel recombinant nucleic acids for use in
 CC diagnosis and treatment of cancer, especially carcinomas, as well as the
 CC use of compositions in screening methods. The compositions of the
 CC invention may have cytostatic activity while the disclosed sequences may
 CC be useful for gene therapy. The carcinoma associated nucleic acids and
 CC proteins are useful for diagnosing and treating carcinomas, for example
 CC lymphoma, breast cancer, prostate cancer or leukemia, or for screening
 CC drug candidates or bioactive agents capable of binding to, or modulating
 CC the activity of, a carcinoma associated protein. The present sequence is
 CC the genomic DNA sequence of the mouse myc gene which is a carcinoma
 CC associated gene of the invention.

PT Use of irinotecan to treat cancer patient by determining if patient has
PT variant alleles of UGT1A1 gene, administering increased/decreased amounts
PT of irinotecan based on increased/decreased levels of UGT1A1 gene product.
XX
PS Disclosure; SEQ ID NO 683; 107pp; English.
XX
CC The invention relates to the novel use of irinotecan to treat a patient
CC suffering from cancer. This involves determining if the patient has one
CC or more variant alleles of the UGT1A1 gene, and if the patient has one or
CC more of such variant alleles, irinotecan is administered in an increased
CC or decreased amount in comparison to the amount that is administered
CC without regard to the patient's alleles in the UGT1A1 gene. The invention
CC has cytostatic activity. A composition of the invention acts as a
CC topoisomerase I inhibitor. The method is useful for treating a patient,
CC an animal e.g. mouse or a human, preferably African or Asian, suffering
CC from cancer such as colorectal, cervical, gastric cancer, lung, ovarian,
CC pancreatic cancer or malignant glioma. The present sequence is used in
CC the exemplification of the invention.

PT New use of irinotecan for preparation of pharmaceutical compositions for

PT treating cancer in subject having genome with variant allele comprising
PT multidrug resistance 1 polynucleotide.
XX
PS Disclosure; SEQ ID NO 683; 130pp; English.
XX
CC The invention relates to the novel use of irinotecan or its derivative
CC for the preparation of pharmaceutical compositions for treating
CC colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or
CC malignant glioma in a subject having a genome with a variant allele which
CC comprises a multidrug resistance 1 (MDR1) polynucleotide. A composition
CC of the invention has cytostatic activity. The invention is useful for the
CC preparation of pharmaceutical compositions for treating colorectal,
CC cervical, gastric, lung, ovarian or pancreatic cancer, or malignant
CC glioma in a subject (preferably human, more preferably African or Asian)
CC or a mouse. The present sequence is used in the exemplification of the
CC invention.

PT polypeptide.
XX
XX Claim 1; SEQ ID NO 4792; 489pp; English.
XX
XX The present invention describes a composition (I) comprising: carriers
CC and immunostimulants; and a polypeptide (II) having a cDNA sequence
CC polypeptide encoded by a polynucleotide (III) having a cDNA sequence (SI)
CC from the 10912 nucleotide sequences as given in ABL77023 to ABL87934,
CC (III) encoding (II) having a sequence (S2), a T cell population of (II),
CC or antigen presenting cells that express (II). (I) has cytostatic
CC activity. An oligonucleotide (IV) that hybridizes to (SI) can be used for
CC detecting ovarian cancer in a patient's biological sample preferably
CC serum or ovarian tissue. The method comprises contacting a biological
CC sample from a patient with (IV), detecting the amount of polynucleotide
CC hybridizing to (IV) and comparing the amount to a predetermined cutoff
CC value and thereby detecting ovarian cancer in the patient, where the
CC amount of polynucleotide hybridizing to (IV) is detected preferably by
CC polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is
CC useful for stimulating and/or expanding T cells specific for an ovarian
CC tumour protein comprising contacting T cells with (III) or (II). (III) is
CC useful in design and preparation of ribozyme molecules for inhibiting
CC expression of the tumour polypeptides and proteins in tumour cells; and
CC to isolate a full length gene from a suitable library e.g., a tumour cDNA
CC library using well known techniques

 PT Screening for anti-neoplastic agent involves exposing cells to a chemical
 PT agent to be tested for anti-neoplastic activity, and determining a change
 PT in expression of a gene of a signature gene set.
 XX
 XX
 PS Claim 1; SEQ ID NO 2966; 44pp; English.
 CC
 CC The present invention describes a method (M1) for screening for an anti-
 CC neoplastic agent. The method involves exposing cells to a chemical agent
 CC to be tested for anti-neoplastic activity, determining a change in
 CC expression of at least one gene (I) of a signature gene set, where (I)
 CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
 CC to ABL70110), or is at least 95% identical to (S), where a change in
 CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
 CC activity and can be used in gene therapy. M1 can be used for screening an
 CC anti-neoplastic agent, and can be used for producing a product which is
 CC the data collected with respect to the anti-neoplastic agent as a result
 CC of M1, and the data is sufficient to convey the chemical structure and/or
 CC properties of the agent. M1 can be used in the treatment of cancer such
 CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
 CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
 CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
 CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
 CC tumour

PT polypeptide of a ovarian tumor polypeptide, polynucleotide encoding
PT polypeptide, antibody specific to polypeptide or T cell expressing
PT polypeptide.
XX
PS Claim 1; SEQ ID NO 10729; 4899P; English.
XX
XX The present invention describes a composition (I) comprising: carriers
CC and immunostimulants; and a polypeptide (II) of a ovarian tumour
CC polypeptide encoded by a polynucleotide (III) having a cDNA sequence (S1)
CC from the 10912 nucleotide sequences as given in ABL77023 to ABL87934,
CC (III) encoding (II) having a sequence (S2), a T cell population of (II),
CC or antigen presenting cells that express (II). (I) has cytostatic
CC activity. An oligonucleotide (IV) that hybridises to (S1) can be used for
CC detecting ovarian cancer in a patient's biological sample preferably
CC serum or ovarian tissue. The method comprises contacting a biological
CC sample from a patient with (IV), detecting the amount of polynucleotide
CC hybridising to (IV) and comparing the amount to a predetermined cutoff
CC value and thereby detecting ovarian cancer in the patient, where the
CC amount of polynucleotide hybridising to (IV) is detected preferably by
CC polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is
CC useful for stimulating and/or expanding T cells specific for an ovarian
CC tumour protein comprising contacting T cells with (III) or (II). (III) is

CC useful in design and preparation of ribozyme molecules for inhibiting
CC expression of the tumour polypeptides and proteins in tumour cells; and
CC to isolate a full length gene from a suitable library e.g., a tumour cDNA
CC library using well known techniques

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 3; SEQ ID NO 8303; 2537bp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length

CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

XX This invention relates to a novel screening method identified as a multi-
CC parameter high throughput screening (MPHTS) assay. Specifically, it
CC refers to an assay that utilizes the disease signature of a plurality of
CC different genes associated with a particular disease, and identifies
CC differential expression between those cells taken from individuals
CC affected by that disease and those that are not affected. The present
CC invention then describes the screening of candidate pharmaceutical
CC compounds to identify those that have a potential therapeutic benefit for
CC the treatment of neuropsychiatric and neurodegenerative disorders
CC including schizophrenia, bipolar affective disorder (BAD) and autism, as
CC well as Parkinson's and Alzheimer's disease. Accordingly, the compounds

CC of this invention exhibit various activities including neuroleptic,
CC nootropic, antianemic and antidepressant. Furthermore, the screening
CC method used in MPHTS will be automated, such that a large number of test
CC compounds may be rapidly screened with a minimal amount of labour and
CC effort. This polynucleotide is a human cDNA sequence of a gene that is
CC differentially expressed in the presence of the therapeutic compound
CC valproate, given in an exemplification of the invention.

XX PT Novel human cancer associated protein encoded within open reading frame

XX PS Of cancer associated gene, useful as targets for diagnosing cancer.

XX PS Disclosure; SEQ ID NO 45; 182pp; English.

XX This invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a murine CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pat_sequences

XX New isolated nucleic acid molecule that encodes a plant protein or its
PT fragment, useful for isolating a variety of agronomically significant
PT genes associated with plant growth, quality or yield, and as molecular
PT tags to map genes.

XX Claim 1; SEQ ID NO 3648; 34pp; English.

CC The invention relates to 17880 cotton expressed sequence tags (ESTs;
CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
CC from primed or non-primed seeds from variety DP50B, mature seeds from
CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
CC tissue, developing fibres, carpel walls and septa from variety
CC Nucleon33B. The invention also relates to substantially purified
CC proteins or their fragments encoded by nucleic acid molecules of the
CC invention, and to transformed plants having a nucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTs are useful as
CC molecular tags to isolate genetic regions, to isolate genes, to map
CC genes, to determine gene function and to determining whether genes are
CC members of a particular gene family. The nucleic acid molecules may be
CC used for isolating a variety of agronomically significant genes
CC associated with plant growth, quality, yield, and could also serve as
CC links in metabolic and catabolic pathways. The nucleic acid molecules are
CC also useful for identifying genes important in initiating and maintaining
CC seed germination or that may be used to mitigate stresses encountered
CC during seed germination. The ESTs additionally enable the acquisition of
CC promoters and cis-regulatory elements which will be useful to express
CC agronomically significant genes in these tissues and/or other tissues,
CC and also permits the acquisition of molecular markers useful in breeding
CC schemes, genetic and molecular mapping, and in cloning of agronomically
CC significant genes. The nucleic acid molecules are further useful for
CC detecting the expression level or pattern of a protein or mRNA and for

CC detecting the presence or quantity of a protein by tissue printing. The
CC present sequence represents a specifically claimed EST isolated from a
CC cotton variety DP50B primed seed cDNA library (LIB3825). The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from the US Patent office at

 PT New spatially-addressable set of single exon nucleic acid probes, useful
 PT for measuring gene expression in sample derived from human breast,
 PT comprises number of single exon nucleic acid probes.
 XX
 PS Claim 1; SEQ ID NO 4526; 327pp + Sequence Listing; English.
 XX
 CC The invention relates to a spatially-addressable set of single exon
 CC nucleic acid probes for measuring gene expression in a sample derived
 CC from human breast and BT 474 cells. The method involves contacting the
 CC probes with a collection of detectably labelled nucleic acids derived

CC from mRNA of human breast, and then measuring the label bound to each
CC probe of the microarray. The probes are useful for verifying the
CC expression of regions of genomic DNA predicted to encode proteins. They
CC are useful for gene discovery, and for determining predisposition and/or
CC prognosing breast disease. Gene expression analysis is useful for
CC assessing the toxicity of chemical agents on cells. The microarray of
CC this invention presents a far greater diversity of probes for measuring
CC gene expression, with far less bias than expressed sequence tag
CC microarrays. The method is suitable for rapid production of functional
CC information from genomic sequence. The present sequence is a single exon
CC nucleic acid probe of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

DR Human genome-derived single exon nucleic acid probes useful for analyzing
XX gene expression in human adult liver.
XX
XX Claim 1; SEQ ID NO 4668; 658pp; English.
XX
XX The invention relates to a single exon nucleic acid probe (SENP) (I) for
XX measuring human gene expression in a sample derived from human adult
XX CC liver, comprising one of 13109 defined nucleotide sequences given in the
XX CC specification (or complements/ fragments). The probe hybridises at high
XX CC stringency to a nucleic acid molecule expressed in the human adult liver.
XX CC (I) may be used for predicting, measuring and displaying gene expression
XX CC in samples derived from human adult liver. The genes identified may be
XX CC involved in genetic liver diseases such as cirrhosis,
XX CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
XX CC associated with coronary heart disease. ABS25011-ABS51005 represent human
XX CC liver single exon nucleic acid probes of the invention. Note: The
XX CC sequence information for this patent does not appear in the printed
XX CC specification but was obtained in electronic format directly from WIPO at

 PT Spatially-addressable set of single exon nucleic acid probes, used to
 PT measure gene expression in human lung samples.
 XX
 PS Claim 1; SEQ ID NO 4589; 634pp; English.
 XX
 CC The invention relates to a spatially-addressable set of single exon
 CC nucleic acid probes for measuring gene expression in a sample derived
 CC from human lung comprising single exon nucleic acid probes having one of
 CC 12614 nucleic acid sequences mentioned in the specification, or their
 CC complements or the 12387 open reading frames derived from the 12614
 CC probes. Also included are a microarray comprising the novel set of probes
 CC; the novel set of probes which hybridise at high stringency to a nucleic
 CC acid expressed in the human lung; measuring gene expression in a sample
 CC derived from human lung, comprising (a) contacting the array with a
 CC collection of detectably labeled nucleic acids derived from human lung
 CC mRNA; and (b) measuring the label detectably bound to each probe of the
 CC array; identifying exons in a eukaryotic genome, comprising (a)
 CC algorithmically predicting at least one exon from genomic sequences of
 CC the eukaryote; and (b) detecting specific hybridisation of detectably
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
 CC having a fragment identical to the predicted exon, the probe is included
 CC in the above mentioned microarray; assigning exons to a single gene,
 CC comprising (a) identifying exons from genomic sequence by the method
 CC above and (b) measuring the expression of each of the exons in several
 CC tissues and/or cell types using hybridisation to a single exon
 CC microarrays having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types indicates that
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene expression
 CC analysis, and for identifying exons in a gene, particularly using human
 CC lung derived mRNA and for the study of lung diseases such as asthma, lung
 CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
 CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
 CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
 CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
 CC histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis,
 CC Karsagen syndrome, fibrocystic pulmonary dysplasia, primary ciliary
 CC dyskinesia, pulmonary hypertension and hyaline membrane disease. The
 CC present sequence is a single exon probe of the invention. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

 PT New human genome-derived single exon nucleic acid probes useful for human
 PT gene expression analysis, for identifying or characterizing alternative
 PT splicing events, for assessing genomic alterations or as tools for
 PT surveying tissues.
 XX
 PS Claim 15; SEQ ID NO 10809; 80pp; English.
 XX
 CC The invention relates to a nucleic acid probe for measuring human gene
 CC expression, comprising any of the 27,400 fully defined nucleotide
 CC sequences in the specification, or their complements or fragments, and
 CC encoding at least 8 amino acids of any of the 6888 amino acid sequences
 CC fully defined in the specification. The probe is a single exon probe that
 CC hybridises under high stringency conditions to a nucleic acid molecule
 CC expressed in human cells or tissues. Also included are a spatially-
 CC addressable set of single exon nucleic acid probes for measuring human
 CC gene expression (comprising a plurality of single exon nucleic acid
 CC probes cited above, where each of the plurality of probes is separately
 CC and addressably isolatable or amplifiable from the plurality), a single
 CC exon microarray for measuring human gene expression, a method of
 CC measuring human gene expression, a vector comprising the single exon
 CC probe cited above, an ORF-encoded peptide comprising at least 8
 CC contiguous amino acids of any of the above-mentioned amino acid
 CC sequences (optionally with conservative amino acid substitutions), an
 CC isolated antibody that binds specifically to a peptide cited above,
 CC a method of selling and/or licensing single exon probes or microarrays to
 CC a customer desiring to measure gene expression, a method of providing
 CC human gene expression data by subsequence, and a computer-readable
 CC storage medium which contains a database having a plurality of records
 CC (each record including data on the expression of a single exon probe
 CC cited above. The probe, methods and apparatus are useful in gene
 CC expression analysis. The probes may be used as tools for surveying
 CC tissues to detect the presence of expressed messages that contain their
 CC specific exon, or in constructing genome-derived single exon microarrays.
 CC In addition, the probes are used in identifying and characterising
 CC alternative splicing events, in detecting and characterising gross

CC products and methods of the invention can be used for the diagnosis,
CC prognosis, and treatment of cancer, tumor progression,
CC hyperproliferative cell growth, and accompanying physical and biological
CC manifestations. They can be used particularly for prostatic disorders
CC such as metastatic prostate cancer, localized prostate cancer, or benign
CC prostate hyperplasia (BPH)

PT New recombinant DNA constructs useful in the field of biochemistry and
PT genetics, and in particular for producing transgenic plants with improved
PT biological characteristics.
XX
XX Claim 1; SEQ ID NO 2994; 14pp; English.
XX
XX The invention relates a recombinant DNA construct comprising a
CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
CC Arabidopsis, wheat and rape but the specification does not indicate which
CC sequences is derived from which organism. Also included is a method of
CC producing a plant having an improved property, comprising transforming a
CC plant with a recombinant DNA construct comprising a promoter region
CC functional in a plant cell operably joined to a polynucleotide encoding a
CC polypeptide associated with the property, and growing the transformed
CC plant. The property is selected from improving plant cold tolerance, for
CC manipulating growth rate in plant cells by modification of the cell cycle
CC pathway, for improving plant drought tolerance, for providing increased
CC resistance to plant disease, for galactomannan production, for production
CC of plant growth regulators, for improving plant heat tolerance, for

CC improving plant tolerance to herbicides, for increasing the rate of
CC homologous recombination in plants, for lign production, for improving
CC plant tolerance to extreme osmotic conditions, for improving plant
CC tolerance to pathogens or pests, for yield improvement by modification of
CC photosynthesis, for modifying seed oil yield and/or content, for
CC modifying seed protein yield and/or content, for yield improvement by
CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
CC and for yield improvement by providing improved plant growth and
CC development under at least one stress condition. The polynucleotide may
CC also encode a plant transcription factor. The methods and compositions of
CC the present invention are useful in the field of biochemistry and
CC genetics, in particular for producing transgenic plants with improved
CC biological characteristics such as increased yield, improved nitrogen
CC flow, increasing plant tolerance to cold or heat, improving plant
CC tolerance to extreme osmotic and drought conditions, and improving plant
CC tolerance to plant pests or pathogens. They can also be used in physical
CC arrays of molecules, plant breeding markers, computer-based storage and
CC analysis systems. The present sequence is one of the 5544 plant cDNA
CC sequences of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from USPRO at
CC seqdata.uspro.gov/sequence.html?docid=20040216190.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 8; SEQ ID NO 15395; 2537pp + Sequence Listing; English.
PS

XX The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesizing polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

XX PS Claim 27; SEQ ID NO 5112; 899bp; English.

XX The present invention relates to a method (M1) for identifying genes

CC involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.

XX PT Novel cardiovascular helix-loop-helix factor polypeptide and polynucleotide useful for regenerating heart tissue and promoting smooth muscle differentiation to treat heart disease or heart injury.

XX PS Disclosure; Page 22-23; 46pp; English.

XX This invention relates to human cardiovascular helix-loop-helix factor (CHF) polypeptides. CHF is a transcription factor expressed in cardiovascular tissue, which contains a basic helix-loop-helix domain. CHF-1 shares structural homology with hairy, a Drosophila protein essential for the development of the peripheral nervous system. The CHF polypeptide is useful for expanding an endogenous population of proliferative cardiomyocytes in a heart tissue, promoting proliferation of a cardiomyocyte in a mammal having myocarditis or that which has suffered myocardial infarction and for regenerating cardiomyocytes in vivo. DNA encoding a CHF-1 polypeptide is also useful for promoting proliferation of a cardiomyocyte, regenerating cardiomyocytes in vitro, inhibiting angiogenesis in a tissue, inducing differentiation of smooth muscle cells in a mammalian tissue, preferably venous tissue, inducing growth of smooth muscle cells in a vein explant, promoting smooth muscle

cell regeneration in an injured or diseased vascular tissue (venous or arterial) and for reducing vein graft stenosis in a mammal by contacting the tissue ex vivo with the DNA prior to implantation of the tissue into an artery of the mammal. The present sequence represents the human alpha-myosin heavy chain (MHC) promoter sequence, which can be used in CHF recombinant expression vector production

Nucleic acid encoding 1-deoxy-D-xylose-5-phosphate reductoisomerase, useful for enhancing or altering isoprenoid synthesis and metabolism in plants.

Example 4; Page 56-61; 65pp; English.

This is the negative (non-coding strand) of an Arabidopsis genomic clone of unknown fragment, the exonic portions of which show homology to Mentha piperita (peppermint) 1-deoxy-D-xylose-5-phosphate reductoisomerase cDNA. The peppermint reductoisomerase can be used to transform plants to enhance or alter their isoprenoid synthesis and metabolism. The enzyme catalyzes the first committed step in the conversion of 1-deoxy-D-xylose-5-phosphate to isopentenyl diphosphate, which in turn, is converted to a variety of molecules such as carotenoids, the prenyl side chains of chlorophyll, plastoquinone and tocopherols. The enzyme can therefore be used to enhance the production of chlorophyll, terpenoids, phytoalexins, toxins and deterrent compounds to improve defence against pathogens, insects and other herbivores, enhance the production of monoterpene flavour and aroma profiles, prepare synthetic intermediates for industrial use such as the synthesis of adhesives, inks and polymers, improve the yield of natural pigments extracted from plants for medicinal or culinary uses, and to enhance the yield of compounds having anti-cancer properties such as vitamin A and vitamin E

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with NotI and cloned
into the NotI and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.
This sequence belongs to sequence cluster 9350.r
For more information about this cluster, see

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with NotI and EcoRV
sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen.

/note="Organ: Eye; Vector: PCWVSORT6; Two different donor
eyes (75-80 years old) yielded approximately 600 mg of
dissected RPE/choroid tissue. This in turn yielded 340 ug
of total RNA and 7 ug of mRNA. A directionally cloned cDNA
library in the PCWVSORT6 vector was constructed at Life
Technologies (Rockville, MD; now part of Invitrogen Corp),
essentially following the protocols of the Superscript
plasmid System (Invitrogen Corp).
<http://www.invitrogen.com/>. The library code
designation was cs. For this library, cDNA inserts were
cloned into the NotI/Mui sites of the vector. EST
analysis was performed on the unambiguated library at the
NIH Intramural Sequencing Center (NISC)."

 VERSION BX173024.1 GI:28004729
 KEYWORDS GSS.
 SOURCE Danio rerio (zebrafish)
 ORGANISM Danio rerio
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Actinopterygii; Neopterygii; Teleostei; Ostariophysi; Cypriniformes; Cyprinidae; Danio.
 1 (bases 1 to 729)
 Humphray, S.J., Huckle, E. and Durham, J.L.
 Submitted (13-MAR-2003) The Sanger Institute, Wellcome Trust Genome Campus, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humphray@sanger.ac.uk Unpublished
 This sequence was generated from the T7 end of BAC 17905. 17905 is part of the Daniokey BAC Library created by R. Plasterk and N.V. Keygene. Further details: http://www.sanger.ac.uk/Projects/D_rerio/.

 library constructed at Texas Tech University by Deshui Zhang in the
 Laboratory of Dr. Henry Nguyen. Sequencing was done in the
 Laboratory for Genomics and Bioinformatics, University of Georgia.
 Sequence ends have been trimmed to exclude vector and regions below
 phred quality 16. Three-prime sequences are presented as their
 reverse complement and have been trimmed to exclude polyA.
 Seq primer: T7 (TAATACGACTCACTATAGG)
 polyA=lee.

/note="Vector: PWD42uv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (<http://www.jax.org/resources/documents/dnares/>). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (g14732114|g1473072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptor complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

 /note="Organ: heads; Vector: pBluescript II KS(+); Site_1:
 EcoRI; Site_2: NotI; This normalized library was
 constructed from 1 million independent clones. cDNA
 synthesis was initiated using an oligo(dT) primer, using
 methylated C in the first strand synthesis reaction.
 Following this first strand reaction, double-stranded cDNA
 was bluntended, ligated to NotI adapters, digested with

EcoRI, size-selected, and cloned into the NotI and EcoRI
 compatible sites of a custom modified MCS of the
 pBluescript (KS+) vector. The library was normalized in 2
 rounds using conditions adapted from Soares et al., PNAS
 (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
 (1996): 791, except that a significantly longer
 reannealing hybridization was used."

Draft Sequence Produced by DOE Joint Genome Institute
www.jgi.doe.gov

COMMENT

Finishing Completed at Stanford Human Genome Center
www.shgc.stanford.edu
Quality: Phrap Quality >=40 99.5% of Sequence;
Estimated Total Number of Errors is 0.4.
NOTE: Shatter libraries failed to resolve the dinucleotide repeat
region from 60278 to 61126. Forced join at 60885.
NOTE: This insert is not the entire sequence of the clone (entire
sequence is 136kb). It is clipped at the overlap with AC018764. The
number of bases overlapped is 17570.

COMMENT

----- Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

----- Project Information

Center project name: HCV

Center clone name: RP11-21E14

----- Summary Statistics

Sequencing vector: Plasmid: M77789

Chemistry: Dye-terminator Big Dye: 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 162741 bases at least Q40

Consensus quality: 163445 bases at least Q30

Consensus quality: 163933 bases at least Q20

Estimated insert size: 162788; sum-of-contigs estimation

Quality coverage: 0x in Q20 bases; agarose-gel estimation

Quality coverage: 7.2x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 102608: contig of 102608 bp in length
* 102609 102708: gap of unknown length
* 102709 142726: contig of 40018 bp in length
* 142727 142826: gap of unknown length
* 142827 160594: contig of 17766 bp in length
* 160595 160694: gap of unknown length
* 160695 163303: contig of 2609 bp in length.

COMMENT

Direct Submission
 Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
 Cambridgehire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
 Clone requesters: clonerequest@sanger.ac.uk
 On Nov 16, 2001 this sequence version replaced gi:15131472.
 The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMEP; Information
 on the WORMEP database can be found at
 http://www.sanger.ac.uk/Projects/C_elegans/wormep This sequence
 was generated from part of bacterial clone contigs of human
 chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
 Group. Further information can be found at
 http://www.sanger.ac.uk/HGP/Chr9
 Rpl1-62L10 is from the library RPl1-11.1 constructed by the group
 of Piter de Jong. For further details see
 http://www.chori.org/bacpac/home.htm
 VECTOR: PBACe3.6

----- Genome Center
 Center: Wellcome Trust Sanger Institute

 Web site: http://www.sanger.ac.uk
 Contact: vegas@sanger.ac.uk

 This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one subclone; and the assembly was confirmed by restriction digest,
 except on the rare occasion of the clone being a YAC.

NOTICE:
 This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by sequence
 from more than one subclone; and the assembly was confirmed by
 restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCT-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateo in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

COMMENT On Jul 2, 2005 this sequence version replaced g1:68158960. Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

```

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateo in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

JOURNAL
Submitted (10-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT
On Sep 18, 2002 this sequence version replaced gi:21738326. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu

Project Information
Center project name: GOME
Center clone name: CH230-316A18

Summary Statistics
Assembly program: Phrap, version 0.990329
Consensus quality: 231500 bases at least Q40
Consensus quality: 234123 bases at least Q30
Consensus quality: 236133 bases at least Q20
Estimated insert size: 239449; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

3 (bases 1 to 275074)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 13, 2002 this sequence version replaced gi:23602290.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

COMMENT

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Project name: GOAP
Center project name: CH230-248N13
Center clone name: CH230-248N13
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 250297 bases at least Q40
Consensus quality: 254244 bases at least Q30
Consensus quality: 256359 bases at least Q20
Estimated insert size: 253751; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one subclone; and the assembly was confirmed by restriction digest,
 except on the rare occasion of the clone being a YAC.

Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
----- Summary Statistics
Center project name: M_BA0355N05

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30) ; an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
and Minko Tateno in the laboratory of Pieter de Jong
(http://www.chori.org) from female C57BL/6J mouse kidney and/or
brain genomic DNA. The clone and detailed information can be
obtained from Research Genetics, Inc. (http://www.resgen.com) or
Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

Center code: SC
Web site: <http://www.sanger.ac.uk>
Contact: zfish-help@sanger.ac.uk

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Bm, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WormPep; Information on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmark.shtml DKEYP-886 is from a Zebrafish BAC library VECTOR: pindigobac-5.

 Project Information
 Center project name: gpc
 Center clone name: 028D19

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

Summary Statistics
 Sequencing vector: plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 173255 bases at least Q40
 Consensus quality: 173482 bases at least Q30
 Consensus quality: 173577 bases at least Q20
 Insert size: 175000; agarose-fp
 Insert size: 173624; sum-of-contigs
 Quality coverage: 9.95x in Q20 bases; agarose-fp
 Quality coverage: 10.02x in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.
 This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 20, 2002 this sequence version replaced gi:23196037.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rac/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:
The RP23-8502 BAC library has been constructed by Kazutoyo Osewaga and Minako Tateo in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone. This clone is overlapped by AC124352.

Center: Washington University Genome Sequencing Center
 Center code: WUSC
 Web site: <http://genome.wustl.edu>
 Contact: submissions@wustl.edu
 Summary Statistics
 Center project name: M_BB0531P16

NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPC1-2 BAC library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC124352.

Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23664495.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separate by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

        Cow Genome Sequencing Consortium.
        Direct Submission
        Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
        of Molecular and Human Genetics, Baylor College of Medicine, One
        Baylor Plaza, Houston, TX 77030, USA
        On Jun 28, 2005 this sequence version replaced gi:52782475.
        The sequence in this assembly is a combination of BAC based reads
        and whole genome shotgun sequencing reads assembled using Atlas
        (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
        in the feature table below represents a scaffold in the Atlas
        assembly (a 'contig-scaffold'). Within each contig-scaffold,
        individual sequence contigs are ordered and oriented, and separated
        by fixed gaps filled with Ns to the estimated size. The sequence
        may extend beyond the ends of the clone and there may be sequence
        contigs within a contig-scaffold that consist entirely of whole
        genome shotgun sequence reads. Both end sequences and whole genome
        shotgun sequence only contigs will be indicated in the feature
        table.

COMMENT

On May 10, 2003 this sequence version replaced gi:23321936. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Aris

(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described

in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Project Information

Center project name: GGCIC

Center clone name: CH230-156P9

Summary Statistics

Assembly program: Atlas 3.0

Consensus quality: 205458 bases at least Q40

Consensus quality: 206915 bases at least Q30

Estimated insert size: 220644; sum-of-contigs estimation

Quality coverage: 8x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 1 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.

* Location/Qualifiers
 1 216422: contig of 216422 bp in length.

----- Summary Statistics
Center project name: M_BA0014N02

NOTICE:

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e. phred quality
>30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone, fosmid clone or direct clone walk sequence.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to obtain the consensus sequence. The
assembly was confirmed by restriction digest.
This finishing standard has slightly changed from the previous
Human standard. Specifically, standards for regions of low sequence
complexity (such as dinucleotide repeats and small unit tandem
repeats) have been relaxed. These regions are very prevalent in the
mouse genome, and the return on extended finishing efforts is
minimal.

If a sequence meets the criteria of the above statement, it needs
no comments or tags. If the criteria are not met, such as ambiguous
bases, then the region is duly annotated.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:

The BAC library has been constructed by Kazutoyo Osegawa and
Minako Tateo in the laboratory of Pletier de Jong
(<http://www.chori.org>) from female C57BL/6J mouse kidney and/or

brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.reagen.com>) or Pletter de Jong and coworkers at <http://www.chori.org>

This sequence is the entire insert of the clone.

----- Project Information
Center project name: GEOA
Center clone name: CH230-11D18
----- Summary Statistics
Assembly program: Atlas 3.0
Consensus quality: 224484 bases at least Q40
Consensus quality: 227184 bases at least Q30
Consensus quality: 229173 bases at least Q20
Estimated insert size: 240500; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

            3 (bases 1 to 239661)
            Rat Genome Sequencing Consortium.
            Direct Submision
            Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
            On Nov 19, 2002 this sequence version replaced gi:22855857.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Actas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Actas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by extend gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (09-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 9, 2002 this sequence version replaced gi:23265279.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Protocol:
WGS-discovery (WGS):
Paired-end low-coverage whole genome shotgun reads were generated

```

from 9 breeds (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each) and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs:

A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately 98%.

Internal-WGA-discovery (I-WGA):

A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of ≥ 30 on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately 98%.

XX	New nucleic acid, oligonucleotides and peptide nucleic acid-oligomers,
PT	useful for detecting cytosine methylation state of genes associated with
PT	pharmacogenomics and for therapy of diseases e.g. cancer.
PS	Claim 1; SEQ ID NO 59; 24pp; English.
XX	The invention relates to a nucleic acid comprising a sequence at least 18
CC	bases in length of a segment of the chemically pretreated DNA of genes
CC	associated with pharmacogenomics according to one of the sequences of the
CC	genes ALDH6 (NM_000693), CYP11A (NM_000781), CYP11B (NM_000497), CYP3A3
CC	(NM_000776 and NM_017460), DYPD (NM_000110), EPHX2 (NM_004996),
CC	(NM_002538), TXNRD1 (NM_003330), UGT8 (NM_003360), MRP (NM_004996),
CC	(NM_019900), NM_019901, NM_019902, NM_019867, NM_019898, NM_019899) and
CC	their complementary sequences, or a sequence (St) chosen from 87
CC	sequences and their complements. The chemical pretreatment is bisulphite
CC	treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC	Also included are an oligomer (11) in particular an oligonucleotide or a
CC	peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC	base sequence having a length of 9 nucleotides which hybridises to or is
CC	identical to a chemically pretreated DNA of genes associated with
CC	pharmacogenomics and their complements, arranged in an array for
CC	analysing diseases associated with the methylation state (CpG) and/or
CC	detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC	oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC	and their complements is useful for diagnosis and therapy of solid
CC	tumours and cancer. The present sequence represents one the 87 DNA
CC	sequences or its complement. Note: The sequence data for this patent did
CC	not form part of the printed specification, but was obtained in
CC	electronic format directly from WIPO at
CC	ftp.wipo.int/pub/published_pct_sequences

XX Nucleic acid comprising fragment of chemically modified gene, useful for
XX diagnosis and treatment of diseases associated with abnormal cytosine
XX methylation.
XX
XX Claim 1; SEQ ID NO 2406; 32pp + Sequence Listing; German.
XX
XX The present invention provides a number of human immune system associated
XX genes which are modified by the methylation of cytosines. The sequences
XX can be used in the diagnosis and treatment of immune system disorders,
XX including eye diseases such as retinopathy, neovascular glaucoma and
XX macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
XX leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
XX rheumatoid arthritis, psoriasis and inflammatory ulcerative bowel
XX diseases. The present sequence is a gene of the invention

XX	PT	New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.	
XX	PS	Disclosure; SEQ ID NO 1774; 980bp; English.	
CC	XX	The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISAs). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischemia, angioneurosis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence is a genomic DNA encoding a partial novel secreted protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format

XX
XX New polypeptides and nucleic acids, useful in gene therapy for treating,
PT inhibiting or preventing e.g. neural, immune system, muscular,
PT respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or
XX renal disorders.
XX
XX Disclosure; SEQ ID NO 1774; 402BP; English.
XX
XX The invention relates to human novel polypeptides and their associated
CC polynucleotides. The polypeptides and polynucleotides are useful in gene
CC therapy for treating, inhibiting or preventing neural disorders, immune
CC system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis
CC and multiple sclerosis), muscular disorders, respiratory diseases (e.g.
CC nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders,
CC gastrointestinal disorders, pulmonary disorders, cardiovascular disorders
CC (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left
CC heart syndrome), renal disorders (e.g. acute kidney failure and end-stage

CC renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and
CC leukemia), inflammatory diseases (e.g. septic shock, bursitis and
CC appendicitis), allergic reactions and conditions (e.g. asthma), blood
CC related disorders (e.g. thrombosis, atherosclerosis and myocardial
CC infarction) and cancerous diseases. Sequences ABX73173-ABX74167 represent
XX human novel polynucleotides of the invention

XX New isolated nucleic acid encoding an apoptase, useful e.g. for diagnosis
PT and treatment of apoptosis-related, especially neurodegenerative,
PT diseases.
XX
XX Claim 1; Page 29-38; 78BP; German.
XX
XX The present invention provides the protein and coding sequences of
CC apoptase enzymes, designated L100, from the human, mouse and rat. The
CC protein can be used in the treatment of apoptosis related diseases,
CC including epilepsy, ischemia, Alzheimer's, Parkinson's and Huntington's
CC diseases, amyotrophic lateral sclerosis, multiple sclerosis, central
CC nervous system injury and stroke. The present sequence is the genomic
CC sequence surrounding the murine apoptase L100 coding sequence of the
XX invention

XX
CC AAK54951 to AAK4702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

 PT methylation.

XX Claim 1; SEQ ID NO 1337; 32pp + Sequence Listing; German.
 PS The present invention provides a number of human immune system associated
 CC genes which are modified by the methylation of cytosines. The sequences
 CC can be used in the diagnosis and treatment of immune system disorders,
 CC including eye diseases such as retinopathy, neovascular glaucoma and
 CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
 CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
 CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
 CC diseases. The present sequence is a gene of the invention

 PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
 PT comprises a nucleotide sequence.
 PS
 XX Claim 1; SEQ ID NO 220; Opp; English.
 CC The present invention relates to novel DNA and protein sequences which
 CC are associated with carcinomas. The sequences are useful for: (i) for
 CC screening drug candidates; (ii) for screening of bioactive agent capable
 CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
 CC a bioactive agent capable of modulating the activity of CAP; (iv) for
 CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
 CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
 CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
 CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
 CC determining Carcinoma Associated (CA) gene copy number. In addition, the
 CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
 CC carcinoma including lymphoma. The present sequence is one such CA coding
 CC sequence. Note: This patent is an equivalent to basic patent
 CC US2002182586A1, for which no sequence data was published

 PT Screening for anti-neoplastic agent involves exposing cells to a chemical
 PT agent to be tested for anti-neoplastic activity, and determining a change
 PT in expression of a gene of a signature gene set.
 XX
 PS Claim 1; SEQ ID NO 4756; 44bp; English.
 XX
 CC The present invention describes a method (M1) for screening for an anti-
 CC neoplastic agent. The method involves exposing cells to a chemical agent
 CC to be tested for anti-neoplastic activity, determining a change in
 CC expression of at least one gene (I) of a signature gene set, where (I)
 CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
 CC to ABL70110), or is at least 95% identical to (S), where a change in
 CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
 CC activity and can be used in gene therapy. M1 can be used for screening an
 CC anti-neoplastic agent, and can be used for producing a product which is
 CC the data collected with respect to the anti-neoplastic agent as a result
 CC of M1, and the data is sufficient to convey the chemical structure and/or
 CC properties of the agent. M1 can be used in the treatment of cancer such
 CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
 CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
 CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
 CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilms's
 CC tumour

PT Combination useful for preparing a composition for treating liver
 PT disorders associated with steroid therapy, e.g., cirrhosis or hepatitis,
 PT comprising cDNAs that are differentially expressed in response to steroid
 PT treatment.
 XX
 PS Claim 1; SEQ ID NO 845; 141bp; English.
 XX
 CC The invention relates to a combination comprising cDNAs that are
 CC differentially expressed in response to steroid treatment. Also included
 CC are the following: a high throughput method for using a cDNA to detect
 CC differential expression of nucleic acids in a sample; and a high
 CC throughput method of screening molecules or compounds to identify a
 CC ligand that specifically binds a cDNA. The sample is from a subject with
 CC Wilson disease and comparison of a standard defines a stage of that
 CC disease. The high throughput method of screening molecules or compounds
 CC to identify a ligand that specifically binds a cDNA comprises: combining
 CC the combination with molecules or compounds under conditions to allow
 CC specific binding; and detecting specific binding between each cDNA and at
 CC least one molecule or compound. The molecules or compounds are regulatory
 CC proteins. The combination is useful for preparing a composition for
 CC treating liver disorders associated with steroid therapy, e.g., cirrhosis
 CC or hepatitis. The present sequence represents a human cDNA which is
 CC differentially expressed in steroid-induced C3A liver cells. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification but was obtained in electronic format directly from USPTO
 CC at seqdata.uspto.gov/sequence.html.

PS Example 1; SEQ ID NO 673; 176pp; English.

XX This invention relates to a method of differentially modulating the
CC growth or differentiation of blood endothelial cells (BEC) or lymphatic
CC endothelial cells (LEC) comprising contacting endothelial cells with a
CC composition comprising an agent that differentially modulates blood or
CC lymphatic endothelial cells. Treating hereditary lymphoedema comprises
CC identifying a human subject with lymphoedema and with a mutation in at
CC least one allele of a gene encoding a LEC protein, where the mutation
CC correlates with lymphoedema in human subjects, and with the proviso that
CC the LEC protein is not VEGFR-3; and administering to the subject a
CC composition comprising a lymphatic growth agent selected from VEGF-C or
CC VEGF-D polypeptides and polynucleotides. The invention may be useful for
CC the development of compounds with an antiangiogenic, cytostatic,
CC vasotropic or antiinflammatory activity or for gene therapy. The method
CC is useful in modulating the growth or differentiation of blood
CC endothelial cells or lymphatic endothelial cells, in treating hereditary
CC lymphoedema, in screening for an endothelial cell disorder or
CC predisposition to the disorder or in monitoring the efficacy or toxicity
CC of a drug on endothelial cells. The agent is useful in manufacturing a
CC medicament for the differential modulation of blood vessel endothelial
CC cell or lymphatic vessel endothelial cell growth or differentiation. The
CC lymphatic growth agent may also be used in manufacturing a medicament for
CC the treatment of hereditary lymphoedema resulting from a mutation in a
CC LEC gene or of other diseases involving the lymphatic vessels, such as
CC various inflammatory diseases and cancer metastasis via the lymphatic
CC system. The present sequence is that of a human LEC/BEC differentially
CC expressed gene which is related to the method of the invention. Note: This
CC sequence does not appear in the specification but was obtained by the
CC indexer using the source data given in table 14 of the specification.

PS Example 2; SEQ ID NO 2033; 210pp; English.

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and

compounds to identify at least one ligand that specifically binds the protein, producing or preparing polyclonal or monoclonal antibodies, or purifying antibodies from a sample. The antibodies, which specifically bind the protein differentially expressed in breast cancer is useful for detecting the expression of a protein in a sample. The BC-cDNAs are also useful for diagnosing, monitoring the treatment of, or staging, breast cancer. This sequence represents a differentially expressed breast cancer

CC associated cDNA. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format

PA (HUMA-) HUMAN GENOME SCI INC.
XX Rosen CA, Barash SC, Ruben SM;
XX WPI, 2001-451937/48.
XX
XX Isolated polypeptide for treating, preventing and/or prognosing
XX disorders related to the musculoskeletal system including musculoskeletal
XX cancers and also for testing and detection e.g. diagnosis.
XX
XX Example 2; SEQ ID NO 3470; 781pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins
XX (AAB03087-AB04109) associated with the musculoskeletal system useful for
XX preventing, treating or ameliorating medical conditions e.g. by protein
XX or gene therapy. The genes are isolated from a range of human tissues
XX disclosed in the specification. The nucleic acids, proteins, antibodies
XX and (ant)agonists are useful in the diagnosis, treatment and prevention
XX of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
XX adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
XX lung, or urogenital; (b) immune disorders e.g. Addison's disease,
XX allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
XX diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
XX arthritis and ulcerative colitis; (c) cardiovascular disorders such as
XX myocardial ischaemia; (d) wound healing; (e) neurological diseases e.g.
XX cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
XX bacterial, fungal and parasitic infections. Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX
XX New nucleic acid molecule, useful for preparing a medicament for
XX preventing, treating or ameliorating a medical condition e.g., cancer of
XX musculoskeletal tissues or osteoporosis.
XX
XX Disclosure; SEQ ID NO 3470; 289pp; English.
XX
XX The invention relates to a novel isolated musculoskeletal system-
XX associated nucleic acid molecule. The nucleic acid of the invention
XX demonstrates cytostatic and osteopathic activities and may be useful for
XX preparing a medicament for preventing, treating or ameliorating a medical
XX condition such as cancer of the musculoskeletal tissues or osteoporosis,
XX possibly via gene therapy or vaccine production. The current sequence is
XX that of the human musculoskeletal system-associated genomic DNA of the
XX invention. The current sequence is not shown within the specification per
XX se but is available on the USPTO web-site
XX http://seqdata.uspto.gov/sequence.html?DocID=20040009488.

XX
XX New recombinant DNA constructs useful in the field of biochemistry and
XX genetics, and in particular for producing transgenic plants with improved
XX biological characteristics.

PS Claim 1; SEQ ID NO 3453; 14pp; English.
XX
XX The invention relates a recombinant DNA construct comprising a
XX polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
XX 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
XX (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
XX Arabidopsis, wheat and rape but the specification does not indicate which
XX sequences is derived from which organism. Also included is a method of
XX producing a plant having an improved property, comprising transforming a
XX plant with a recombinant DNA construct comprising a promoter region
XX functional in a plant cell operably joined to a polynucleotide encoding a
XX polypeptide associated with the property, and growing the transformed
XX plant. The property is selected from improving plant cold tolerance, for
XX manipulating growth rate in plant cells by modification of the cell cycle
XX pathway, for improving plant drought tolerance, for providing increased
XX resistance to plant disease, for galactomannan production, for production
XX of plant growth regulators, for improving plant heat tolerance, for
XX improving plant tolerance to herbicides, for increasing the rate of
XX homologous recombination in plants, for lignin production, for improving
XX plant tolerance to extreme osmotic conditions, for improving plant
XX tolerance to pathogens or pests, for yield improvement by modification of
XX photosynthesis, for modifying seed oil yield and/or content, for
XX modifying seed protein yield and/or content, for yield improvement by
XX modification of carbohydrate, nitrogen or phosphorus use and/or uptake
XX and for yield improvement by providing improved plant growth and
XX development under at least one stress condition. The polynucleotide may
XX also encode a plant transcription factor. The methods and compositions of
XX the present invention are useful in the field of biochemistry and
XX genetics, in particular for producing transgenic plants with improved
XX biological characteristics such as increased yield, improved nitrogen
XX flow, increasing plant tolerance to cold or heat, improving plant
XX tolerance to extreme osmotic and drought conditions, and improving plant
XX tolerance to plant pests or pathogens. They can also be used in physical
XX arrays of molecules, plant breeding markers, computer-based storage and
XX analysis systems. The present sequence is one of the 5544 plant cDNA
XX sequences of the invention. Note: The sequence data for this patent did
XX not form part of the printed specification, but was obtained in
XX electronic format directly from USPTO at
XX seqdata.uspto.gov/sequence.html?DocID=20040216190.

XX XX
XX CC The present invention describes hereditary haemochromatosis gene products
XX CC from the human haemochromatosis gene. The present sequence represents a
XX CC hereditary haemochromatosis subregion from an individual unaffected by
XX CC hereditary haemochromatosis (HH). Also described is a method to determine
XX CC the presence or absence of the common hereditary haemochromatosis (HFE)
XX CC gene mutation in an individual comprising: (a) providing DNA or RNA from
XX CC the individual; and (b) assessing the DNA or RNA for the presence or
XX CC absence of a haplotype or genotype where the presence or absence of the
XX CC haplotype genotype indicates the likely presence of the HFE gene mutation
XX CC in the genome of the individual. The HFE gene sequences from the present
XX CC invention can be used to develop products for use in the diagnosis and
XX CC treatment of HFE. The present invention also describes BTF genes, which
XX CC are homologues of the milk protein butyrophilin (BT), and can be used in
XX CC the production of agonists and antagonists of BT function. Also described
XX CC are: (1) a Roret gene which can be used to develop products for the
XX CC study, diagnosis and treatment of lupus and Sjogren's syndrome; and (2)
XX CC NPT3 and NPT4 genes which are homologues of a type 1 sodium transport
XX CC gene, and can similarly be used for hypophosphatemia

XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 41957; 3071bp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
XX amino acid sequences given in AAM82170 to AAM91921. (I) have cytotoxic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patients own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/haematopoietic-related diseases, especially
XX cancers and cancer metastases of haematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/haematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAM82169
XX represent sequences used in the exemplification of the present invention

CC	The invention relates to human Parkinson's disease associated protein
CC	20.13 (ABP58960) and nucleic acids encoding it (ABZ70778). The protein
CC	has a molecular weight of 20.13 kD. The invention also relates to a
CC	method for the recombinant production of the protein, an antagonist of
CC	the protein, and the use of the protein, gene and antagonist in
CC	therapeutic applications. Parkinson's disease associated protein 20.13
CC	can be used in the treatment of a variety of diseases such as cancer and
CC	HIV (human immunodeficiency virus) infection. The present sequence
CC	represents cDNA encoding human Parkinson's disease associated protein

XX
XX New recombinant DNA construct, useful for improving plant tolerance to
XX cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
XX pests, for conferring increased resistance to plant disease, or for
XX improving yield.
XX
XX Claim 1; SEQ ID NO 29775; 15pp; English.
XX
XX The invention describes a recombinant DNA construct comprising a
XX polynucleotide consisting of a sequence encoding an amino acid sequence
XX available in electronic form from the US patent office at
XX ftp.segdata.uspto.gov/sequence.html?DocID:200403488. The polynucleotide
XX of the invention are also useful in physical arrays of molecules and as
XX plant breeding markers. The recombinant DNA construct is useful for
XX improving plant tolerance to cold, heat, drought, herbicides, extreme
XX osmotic conditions, pathogens or pests, for manipulating growth rate in
XX plant cells by modification of the cell cycle pathway, for conferring
XX increased resistance to plant disease, for producing galactomannan,
XX lignin or plant growth regulators, for increasing the rate of homologous
XX recombination in plants, for improving yield by modification of
XX photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
XX or by providing improved plant growth and development under at least one
XX stress condition or for modifying seed oil or protein yield and/or
XX content. This sequence represents a plant full length insert
XX polynucleotide that can be used in the recombinant DNA construct of the
XX invention.

XX
XX Claim 1; SEQ ID NO 1968; 2449pp; English.
XX
XX The invention relates to 2495 novel polynucleotides (I) and their encoded
XX polypeptides, sequences hybridizing to these nucleotides, sequences
XX encoding partial polypeptides and sequences having 70% or 90% identity to
XX the nucleotide and protein sequences. The nucleotides and polypeptides
XX are useful as diagnostic markers or therapeutic target for the diseases
XX or morbid states. They are also useful for treating osteoporosis,
XX neurological diseases, Alzheimer's diseases, Parkinson's diseases,
XX dementia and various cancers. This sequence corresponds to a nucleotide
XX sequence of the invention.

 PT Identifying a compound for regulating activity or expression of a
 PT dopamine receptor, useful in identifying compounds to regulate skeletal
 PT muscle mass or function, to treat muscle atrophy, induce hypertrophy and
 PT treat muscular dystrophies.
 XX
 PS Disclosure; SEQ ID NO 31; 74pp; English.
 CC The invention relates to a method for identifying candidate compounds for
 CC regulating skeletal muscle mass or function. The method comprising
 CC contacting a test compound with a D1 or D5 dopamine receptor and
 CC identifying those compounds that bind to or activate the receptor. The
 CC method is used to regulate skeletal muscle mass or function, to treat
 CC muscle atrophy or to induce hypertrophy or treat muscular dystrophies.
 CC The present sequence is pig dopamine D1 receptor DNA.

CC which represent the human ORF open reading frames 1 to 3161. The ORF
CC sequences have activities such as: cytostatic; hepatotropic; vulnery;
CC antipneumatic; antipneumonia; nocrotropic; neuroprotective; osteopathic;
CC anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;
CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive;
CC dermatological; immunosuppressive; antiinflammatory; antibacterial;
CC antiviral; antifungal; antirheumatic; antichryoid; and antanaemic. The
CC sequences can be used for determining the presence of or predisposition
CC to, or preventing or treating pathological conditions associated with an
CC ORF-associated disorder. The nucleic acids can be used to express ORF
CC proteins in gene therapy vectors. The proteins and nucleic acids may be
CC used to treat cancers, proliferative disorders, neurodegenerative
CC disorders, osteoarthritis, graft vs host disease, cardiovascular disease,
CC diabetes mellitus, hypertension, hypothyroidism, cholesterol ester
CC storage, systemic lupus erythematosus, severe combined immunodeficiency
CC (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
CC disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and
CC cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease, to
CC enhance coagulation, to inhibit thrombosis, and as a contraceptive

XX		
PT	New cardiovascular system related polynucleotides and polypeptides,	
PT	useful for diagnosing,	treating and/or preventing disorders of the
XX	cardiovascular system.	
XX		
PS	Claim 1,	SEQ ID NO 1740; 674dp; English.
XX		
CC	Sequences AAS3741-AAS3642 represent genomic DNA molecules, which encoded	
CC	the cardiovascular system antigen polypeptides of the invention.	
CC	Cardiovascular system antigens and their associated polynucleotides are	
CC	useful in the diagnosis, treatment and prevention of various types of	
CC	disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,	
CC	chickens or sheep. A pathological condition can be determined by	
CC	detecting the presence or absence of a mutation in a cardiovascular	
CC	system antigen polynucleotide. The treatable disorders include autoimmune	
CC	diseases such as rheumatoid arthritis, hyperproliferative disorders such	

CC	as neoplasms of the breast or liver, cardiovascular disorders such as
CC	cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,
CC	nervous system disorders such as Alzheimer's disease, infections caused
CC	by bacteria, viruses and fungi, ocular disorders such as corneal
CC	infection, endocrine disorders such as premature labour and infertility,
CC	gastrointestinal disorders such as Crohn's disease, renal disorders such
CC	as glomerulonephritis and respiratory disorders such as asthma and
CC	pleurisy. The polypeptides can also be used to aid wound healing, to
CC	prevent skin aging due to sunburn, to maintain organs before
CC	transplantation, to regenerate tissues and in chemotaxis. Note: The
CC	sequence data for this patent did not form part of the printed
CC	specification, but was obtained in electronic format directly from WIPO
CC	at ftp.wipo.int/pub/published_pct_sequences

DR
XX
XX
XX New cardiovascular system related polynucleotides and polypeptides,
PT useful for preventing, treating, or ameliorating a medical condition,
PT such as cancer of cardiovascular tissues and cancer metastases.
XX
XX Claim 1; SEQ ID NO 1740; 262pp; English.
XX
XX The invention relates to human cardiovascular system related polypeptides
CC and the polynucleotides encoding them. The polypeptides, polynucleotides
CC and antibodies to the polypeptides are useful for diagnosing a
CC pathological condition or a susceptibility to a pathological condition,
CC for preventing, treating, or ameliorating a medical condition, such as
CC cancer of cardiovascular system tissues, proliferative disorders, foetal
CC and developmental abnormalities, haematopoietic disorders, diseases of
CC the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
CC arthritis), inflammation, allergies, neurological disorders (e.g.,
CC Alzheimer's disease, Parkinson's disease), cognitive disorders,
CC schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
CC diabetes, atherosclerosis, cardiovascular disorders, angiogenic
CC disorders, kidney disorders, gastrointestinal disorders, pregnancy-
CC related disorders, endocrine disorders and infections. The nucleic acids
CC are also useful for chromosome identification, radiation hybrid mapping
CC or long-range restriction mapping. The polypeptides and polynucleotides
CC may also be used as food additives or preservatives to increase or
CC decrease storage capabilities, fat content or other nutritional
CC components. This sequence represents human cardiovascular system related
CC genomic DNA of the invention.

XX
XX WPI, 2004-081713/08.
XX
XX
XX New cardiovascular system-related nucleic acid molecule, useful for
PT diagnosing, preventing or treating diseases of the cardiovascular system,
PT and in chromosome mapping, drug screening or in pharmacogenomics.
XX
XX
PS Disclosure; SEQ ID NO 1740; 262bp; English.
XX
XX
CC The invention relates to an isolated nucleic acid molecule encoding a
CC human cardiovascular system associated polypeptide (or antigens), or its
CC fragment. Also included recombinant vectors, recombinant host cells, an
CC isolated human cardiovascular system associated polypeptide (including
CC its fragment, allelic variant, species homologue or epitope), an isolated
CC antibody that binds specifically to a human cardiovascular system
CC associated polypeptide, diagnosing a pathological condition or
CC susceptibility to a pathological condition (comprising determining the
CC presence or absence of a mutation in human cardiovascular system
CC associated nucleic acid and diagnosing a condition based on the presence
CC or absence of the mutation), identifying a binding partner to human
CC cardiovascular system associated polypeptides, the gene corresponding to
CC the human cardiovascular system associated cDNA sequence and identifying
CC an activity in a biological assay comprising expressing the human
CC cardiovascular system associated cDNA in a cell, isolating the
CC supernatant, detecting an activity in a biological assay and identifying
CC the protein in the supernatant having the activity. The human
CC cardiovascular system associated nucleic acids and polypeptides are used
CC to prevent, treat or ameliorate a medical condition (for example in
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep), for
CC example autoimmune diseases such as rheumatoid arthritis,
CC hyperproliferative disorders, for example neoplasms of the breast or
CC liver, cardiovascular disorders, for example cardiac arrest,

 XX
 CC The invention relates to an isolated nucleic acid comprising at least 10
 CC contiguous nucleotides of any of the 233 polynucleotide sequences given
 CC in the specification, or its complement. The nucleic acids encode cancer-
 CC associated proteins. Also included are an expression vector comprising
 CC the isolated nucleic acid cited above, a host cell comprising the above
 CC recombinant nucleic acid or expression vector, a microarray for detecting
 CC a cancer-associated (CA) nucleic acid comprising at least one probe
 CC comprising at least 10 contiguous nucleotides of any of the above-
 CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
 CC an open reading frame of a CA sequence selected from any of the 95
 CC polynucleotide sequences as mentioned in the specification, or its
 CC complement), an isolated antibody, (or its antigen binding fragment) that
 CC binds to the above polypeptide, a hybridoma that produces the above
 CC monoclonal antibody, a pharmaceutical composition comprising the above
 CC antibody and a pharmaceutical excipient, a kit for detecting cancer
 CC cells comprising the antibody cited above, methods for diagnosing cancer
 CC or for detecting the presence or absence of cancer cells in an
 CC individual, a method for inhibiting a growth of cancer cells in an
 CC individual, a method for delivering a therapeutic agent to cancer cells
 CC in an individual, an electronic library comprising the above
 CC polynucleotide or polypeptide (or their fragments), methods of screening
 CC for anticancer activity or for a bioactive agent capable of modulating
 CC the activity of a CA protein (CAP), methods for detecting cancer
 CC associated with expression of a polypeptide in a test cell sample, a
 CC method for treating cancers and a method for inhibiting the expression of
 CC CA gene in a cell. The composition and methods are useful for detecting,
 CC diagnosing, preventing and treating cancers, especially lymphoma and
 CC leukemia. These may also be used in screening for agents that modulate
 CC cancer. The present sequence is a human CAP cDNA sequence. Note: The
 CC specification, but was obtained in electronic format directly from WIPO

CC PS	Claim 1; SEQ ID NO 31513; 21bp + Sequence Listing; English.
CC CC	The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signaling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABU30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB572072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New compound that modulates huntingtin interacting protein 1 expression,
XX useful in treating an animal having a disease or condition involving
XX dysregulation of cellular apoptosis.
XX
XX
XX Example 15; SEQ ID NO 11; 85pp; English.
XX
XX The invention relates to a compound targeted to a nucleic acid molecule
XX encoding huntingtin interacting protein 1, H1P1. The compound, 8-80
XX nucleobases in length, is an antisense oligonucleotide, where the
XX compound specifically hybridises with the nucleic acid molecule encoding
XX huntingtin interacting protein 1 comprising a sequence appearing as
XX ADN01766 and inhibits the expression of huntingtin interacting
XX protein 1 in cells or tissues, screening for a modulator of huntingtin
XX interacting protein 1, a diagnostic method for identifying a disease
XX state, a kit or assay device comprising the compound and treating an
XX animal having a disease or condition associated with huntingtin
XX interacting protein 1 compound so that expression of huntingtin
XX interacting protein 1 is inhibited. The compound and the methods are
XX useful in treating an animal having a disease or condition involving
XX dysregulation of cellular apoptosis e.g. Huntington's disease. The H1P1
XX gene is located on chromosome 7q41.23. The present sequence is the H1P1
XX genomic DNA, a target for the antisense oligonucleotides.

XX
XX PT New organ preferential nucleic acids and polypeptides, useful in
XX PT producing rice plants with desired characteristics and which are

```

PT resistant to herbicide, plant pathogen, fungi, bacteria, virus, insect,
PT nematode, and stress.
XX
PS Claim 1; SEQ ID NO 19; 236bp; English.
XX
CC This invention relates to a novel method of identifying nucleic acid
CC molecules, or fragments thereof, that are expressed in an organ
CC preferential manner in rice. Specifically, it refers to producing rice
CC cell lines that carry tagged genes modified by T-DNA/GUS based
CC insertional mutagenesis, where the GUS portion of the insert is the
CC promoterless beta-glucuronidase reporter gene that can only be expressed
CC when it is inserted into an active gene. The present invention describes
CC generating transformed rice lines containing transfer-DNA (T-DNA)
CC insertions that also carry a gene encoding the selectable marker
CC hygromycin phosphotransferase (HPT). Accordingly, this method can be used
CC to produce rice plants with desirable characteristics including increased
CC grain yield and nutritional content, resistance to biotic stress,
CC pesticides, herbicides or insects, altered morphology or improved
CC characteristics referring to shape, taste or cooking quality of the
CC grain. This polynucleotide sequence represents the genomic DNA of a rice
CC gene that will be T-DNA/GUS tagged for expression analyses, given in an
CC exemplification of the invention.

PT Novel nucleic acid involved in controlling plant flowering processes is
PT useful for generating transgenic plants, in particular strawberry plants
PT having altered flowering behavior such as early, delayed or day-neutral
PT flowering.
XX
PS Disclosure; Page 82-87; 97tp; English.
XX The present invention provides the nucleic acid and protein sequences of

CC a number of proteins from the strawberry which are involved in the
CC regulation of flowering. These were identified using primers based on the
CC homologous sequences from A. thaliana, B. napus and R. sativus. They can
CC be used in the production of transgenic field crops whose flowering is
CC regulated and the time of fruiting and harvesting can be manipulated

PS
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX PI Rosen CA, Barash SC, Ruben SM;
XX
XX DR WPI; 2001-488782/53.
XX
XX FX New polynucleotides and polypeptides for diagnosing, treating, preventing
PT or prognosing e.g. diseases or disorders of the nervous, musculoskeletal,
PT excretory, gastrointestinal, reproductive, and respiratory systems.
XX
XX PS Disclosure; SEQ ID NO 2118; 642pp; English.
XX
XX CC The invention relates to novel nucleic acids encoding novel human foetal
CC antigens. The nucleic acids and proteins are used to prevent, treat (e.g.
CC by gene therapy) or ameliorate a medical condition in e.g. humans, mice,
CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used
CC in diagnosing a pathological condition or susceptibility to a
CC pathological condition. The antibodies to the antigens can also be used
CC in alleviating symptoms associated with the disorders and in diagnostic
CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays
CC (ELISA). Disorders which are diagnosed or treated include autoimmune
CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.
CC neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac
CC arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiodenesis,
CC nervous system disorders e.g. Alzheimer's disease, infections caused by
CC bacteria, viruses and fungi and ocular disorders e.g. corneal infection.
CC The polypeptides can also be used to aid wound healing and epithelial
CC cell proliferation, to prevent skin aging due to sunburn, to maintain
CC organs before transplantation, for supporting cell culture of primary
CC tissues, to regenerate tissues and in chemotaxis. The polypeptides can
CC also be used as a food additive or preservative to increase or decrease
CC storage capabilities, fat content, lipid, protein, carbohydrate,
CC vitamins, minerals, cofactors and other nutritional components. Numerous
CC examples of diseases and disorders treated by the nucleic acids and
CC proteins are given in the specification. The present sequence is a
CC genomic DNA fragment from a gene encoding a foetal antigen of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

/note="Vector: pBACindigo; Site 1: EcoRI; Site 2: EcoRI;
Rice is the most important food crop in the world. Half of
the world population, especially those inhabiting highly
populated areas of the humid tropics and subtropics, rely
on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a
haploid genome equivalent of 431 Mbp (Arumuganathan and
Earle, 1991). The relatively small genome of rice, three
times larger than that of Arabidopsis, makes it suitable
for genomic studies. In order to facilitate positional
cloning, physical mapping and genome sequencing of rice,
we have constructed a BAC library from Oryza sativa.
Nipponbare variety using EcoRI as the cloning enzyme. The
library contains 55,296 clones with an average insert size
of 121 kb providing approximately 15 haploid genome
equivalents. The deep coverage allows the isolation a
particular sequence with a probability of 99.9%. Three
high density filters, each containing 18,432 clones
(doubly spotted), represent the whole library for colony
screening and can be requested from the Clemson University
BAC/EST Resource Center (www.genome.clemson.edu)."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adapted DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of PWD42 (gi14732114 gb AF129072.1), a copy-number inducible derivative of plasmid RL. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adapted mouse DNA was annealed to adapted vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Naming Conventions: EST name is generated by the concatenation of
the UGI Clone Id and the direction of sequencing. The suffix '.rev'
indicates a reverse sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.
Plate: XZG 0245 row: n column: 5
High quality sequence stop: 687

 /clone_lib="Douglas-fir cDNA library PmIFG_73-6"
 /note="Vector: pGEM-3Z; Site 1: EcoICRI; Site 2: EcoICRI;
 The cDNA library was obtained from one month old
 Douglas-fir seedlings. Total RNA was extracted from -5 g
 of ground tissue that consisted of the mixture of 10
 seedlings following the protocol described in Chang et
 al. (1993). mRNA was isolated from the total RNA using
 the PolyAtract mRNA Isolation System III (Promega 25300).
 Double stranded cDNA was prepared using the Universal
 Ribocloner cDNA Synthesis System (Promega C4360) and
 filtered through a Sephadryl S-400 column to remove low
 molecular weight products of less than 300 bp.
 Double-stranded blunt-end cDNA was ligated into the
 EcoICRI-cut dephosphorylated pGEM-3Z sequencing vector and
 electroporated into E. coli DH5 alpha. cDNA clones were
 sequenced by Integrated Genomics, Inc. (Chicago, USA)."

 The sequence contained an oligo-dT track that was present in the
 oligonucleotide that was used to prime the synthesis of first
 strand cDNA and therefore this may represent a bonafide poly A
 tail. The sequence tag present in the cDNA between the NotI site
 and the oligo-dT track served to identify it as a clone from the
 normalized hypothalamus library cDNA library Preparation: M.B.

Naming Conventions: EST name is generated by the concatenation of
the JGI Clone id and the direction of sequencing. The suffix '.rev'

indicates a reverse sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.
Small Insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.

Site_2: NotI; This normalized library was constructed from
1 million independent clones. cDNA synthesis was initiated
using an oligo(dT) primer, using methylated C in the first
strand synthesis reaction. Following this first strand
reaction, double-stranded cDNA was blunt-ended, ligated to
NotI adapters, digested with EcoRI, size-selected, and
cloned into the NotI and EcoRI compatible sites of a
custom modified MCS of the pBluescript (KS+) vector. The
library was normalized in 2 rounds using conditions
adapted from Soares et al., PNAS (1994) 91: 9228-9232 and
Bonaldo et al., Genome Research 6 (1996): 791, except that
a significantly longer reannealing hybridization was
used."

Naming Conventions: EST name is generated by the concatenation of the JGI clone id and the direction of sequencing. The suffix '.rev' indicates a reverse sequencing read of the insert. It does not necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.
Small Insert: Based upon one or more sequencing reads of this clone where vector sequence was present at both ends, this clone has been determined to contain a cDNA insert on the order of 600-1000 bases.

TROPICALIS_SEQUENCE_ID: TTPA071h22.q1kat7
Sequencing primer: T7
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Nigel Garrett.

cDNA was oligo dt primed from 5ug of poly A+ RNA from tadpole
embryos. EcoRI-NotI cut cDNA was then ligated into PCS107 with
EcoRI at the 5' end and NotI at the 3' end.
Vector: PCS107; Site 1: EcoRI; Site 2: NotI
Host: Escherichia coli DH10B.

Naming Conventions: EST name is generated by the concatenation of
the JGI Clone id and the direction of sequencing. The suffix '.rev'
indicates a reverse sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.

Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.
Small Insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 ----- Genome Center -----
 Center: Baylor College of Medicine
 Center code: BCM
 Web site: <http://www.hgsc.bcm.tmc.edu/>
 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information -----
 Center project name: HCVm
 Center clone name: RP11-21E14
 ----- Summary Statistics -----
 Sequencing vector: Plasmid; M7789
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990329
 Consensus quality: 162741 bases at least Q40
 Consensus quality: 163445 bases at least Q30
 Consensus quality: 163933 bases at least Q20
 Estimated insert size: 162788; sum-of-contigs estimation
 Quality coverage: 0x in Q20 bases; agarose-fp estimation
 Quality coverage: 7.2x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 4 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.
 * 1 102608: contig of 102608 bp in length
 * 102609 102708: gap of unknown length
 * 102709 143726: contig of 40018 bp in length
 * 142727 142826: gap of unknown length
 * 142827 160594: contig of 17768 bp in length

FEATURES	*	160595	160694: gap of unknown length
	*	160695	163303: contig of 2609 bp in length.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: HAO
Center clone name: RP11-538B23
----- Summary Statistics
Sequencing vector: M13;
Chemistry: Dye-Primer Bodipy: 1% of reads
Chemistry: Dye-terminator Big Dye: 8% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 123715 bases at least Q40
Consensus quality: 130186 bases at least Q30
Consensus quality: 133609 bases at least Q20
Estimated insert size: 138821; sum-of-coverage estimation
Quality coverage: 4x in Q20 bases; sum-of-coverage estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 19 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

TITLE The genome sequence of Canis familiaris
JOURNAL Unpublished (2004)
COMMENT

Contact: Kerstin Lindblad-Toh
Whitehead Institute for Biomedical Research, Center for Genome
Research
320 Charles Street, Cambridge, MA 02141, USA

Tel: 6172521477
Fax: 6172580903
Email: kersti@genome.wi.mit.edu

Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 639
Protocol:

WGS-discovery (WGS) :
Paired-end low-coverage whole genome shotgun reads were generated
from 9 breeds

(German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
Retriever, English
Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese
Water Dog -100,000 each)
and five other canids (Chinese, Alaskan, Indian and Spanish Gray
Wolf as well as the
Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly
and SNP detection was
carried out by SSAHA-SNP. 863872 reads were annotated as STSs and
485941 SNPs were
annotated with alleles from the boxer and the breed or canid from
which the particular
read came. The validation rate for these SNPs was estimated at
approximately 98%.

MGA-discovery (MGA) of Boxer/Poodle SNPs:
A second set of SNPs was generated using a similar methodology
except that the contigs
from the 1.5x poodle assembly (Kirkness 2003) were used instead of
WGS reads. Since this
sequence lacked base quality scores, arbitrary quality scores of
phred 40 were assigned
before the poodle sequence was placed uniquely on the CanFam1.0
boxer assembly and SNP
detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated
with alleles from the
boxer and the poodle. The validation rate for these SNPs was
estimated at approximately 78%.

Internal-MGA-discovery (I-MGA) :
A third set of SNPs were discovered by comparing reads in the MGA
assembly. SNPs were
defined as mismatch positions that had a base quality of >= 30 on
both reads in a region
that aligned without gaps, and with at most one additional mismatch
in the ten flanking
bases. For each allele, at least one additional read had to confirm
it. 731476 SNPs were
annotated with alleles between the two boxer alleles. The
validation rate for these SNPs
was estimated at approximately 78%.

Tel: 6172580933
Fax: 6172580903
Email: mczody@broad.mit.edu
Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 777
Protocol:
23,021,928 chimpanzee whole genome shotgun reads were aligned to
the Human genome NCBI
Build 34 (Ng16,July 2003). Chimp WGS reads were from 9 donors,
including Clint (Pan
troglodytes verus), 3 other Pan troglodytes verus chimps
(Donald,Karlen,Yvonne), 3 Pan
troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps
of unknown origin
(Don,Unknown Chimp). Common names: Pan troglodytes verus is the
western chimp and Pan
troglodytes troglodytes is the central chimp. To be included in
chimpanzee SNP discovery, a
read must be at least 500bp in length, at least 50% of its base
calls must have phred
score >= 20, at least 30% of its base calls must satisfy
SNOS(30,25) (single strand NGS, the
base in question has phred score >= 30, the surrounding 10 bases in
the read have phred
score >= 25), and the read must have at least 200 bp SNOS(30,25)
bases. Reads not uniquely
placed in the genome and read pairs whose two ends were not
consistently placed were
discarded. After above filtering, NGS(30,25) standard was applied
to all pairs of
overlapping reads to call NGS bases and SNPs. Alignments (between
two reads) with less
than 100 NGS bases or with SNP rate > 0.01 were discarded. To
exclude alignment between two
copies of a single read, comparisons between two reads that share
95% of their genome
alignments (>=95% bases of read A and >=95% bases of read B were
placed at the same locus
of human genome) were discarded.

 ----- Project Information
 Center project name: AMCD
 Center clone name: CH224-61C22
 ----- Summary Statistics
 Sequencing vector: plasmid;
 Chemistry: Dye-terminator Big Dye 100% of reads
 Assembly program: Phrap; version 0.990329
 Consensus quality: 52310 bases at least Q40
 Consensus quality: 56858 bases at least Q30
 Consensus quality: 59773 bases at least Q20
 Estimated insert size: 48356; sum-of-coverage
 Quality coverage: 1x in Q20 bases; sum-of-coverage

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 38 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.
 *
 * 1 1092: contig of 1092 bp in length
 * 1093 1192: gap of unknown length
 * 1193 2380: contig of 1188 bp in length
 * 2381 2480: gap of unknown length
 * 2481 3973: contig of 1493 bp in length
 * 3974 4073: gap of unknown length
 * 4074 5236: contig of 1163 bp in length
 * 5237 5336: gap of unknown length
 * 5337 6574: contig of 1238 bp in length
 * 6575 7782: gap of unknown length
 * 7783 7882: contig of 1108 bp in length
 * 7883 9063: gap of unknown length
 * 9064 9163: contig of 1181 bp in length
 * 9164 10488: gap of unknown length
 * 10489 10588: contig of 1325 bp in length
 * 10589 11685: gap of unknown length
 * 11686 11785: contig of 1097 bp in length
 * 11786 13260: gap of unknown length
 * 13261 13360: contig of 1475 bp in length
 * 13361 14675: gap of unknown length
 * 14676 14775: contig of 1315 bp in length
 * 14776 16380: gap of unknown length
 * 16381 16480: contig of 1605 bp in length
 * 16481 17483: gap of unknown length
 * 17484 17583: contig of 1003 bp in length
 * 17584 18733: gap of unknown length
 * 18734 18833: contig of 1150 bp in length
 * 18834 20058: gap of unknown length
 * 20059 20158: contig of 1225 bp in length
 * 20159 21819: gap of unknown length
 * 21820 21919: contig of 1661 bp in length
 * 21920 23131: gap of unknown length
 * 23132 23231: contig of 1212 bp in length
 * 23232 24595: gap of unknown length
 * 24596 24959: contig of 1364 bp in length
 * 24960 25814: gap of unknown length
 * 25815 25914: contig of 1119 bp in length
 * 25915 27238: gap of unknown length
 * 27239 29299: contig of 1324 bp in length
 * 29300 29399: gap of unknown length
 * 29400 30778: contig of 1961 bp in length
 * 30779 30778: gap of unknown length
 * 30779 30778: contig of 1379 bp in length

 Cow Genome Sequencing Consortium.
 Direct Submission
 Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA
 On Jun 29, 2005 this sequence version replaced gi:67972531.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

----- Genome Center
 Center: Baylor College of Medicine
 Center code: BCM
 Web site: <http://www.hgsc.bcm.tmc.edu/>
 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information
 Center project name: RPN
 Center clone name: CH240-127C15
 ----- Summary Statistics
 Assembly program: Atlas 3.0
 Consensus quality: 197006 bases at least Q40
 Consensus quality: 200464 bases at least Q30
 Consensus quality: 203406 bases at least Q20
 Estimated insert size: 201090; sum-of-contigs estimation
 Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 41 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

COMMENT

On Jun 29, 2005 this sequence version replaced gi:62460730.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence

contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center
Center: Baylor College of Medicine

Center code: BCM

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: FEHT

Center clone name: CH240-76E11

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 205315 bases at least Q40

Consensus quality: 207032 bases at least Q30

Consensus quality: 207798 bases at least Q20

Estimated insert size: 209550; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 28385: contig of 28385 bp in length
* 28386 28435: gap of 50 bp
* 28436 89788: contig of 61532 bp in length
* 89789 89838: gap of 50 bp
* 89839 106859: contig of 17021 bp in length
* 106860 106909: gap of 50 bp
* 106910 124729: contig of 17820 bp in length
* 124730 124779: gap of 50 bp
* 124780 204917: contig of 80138 bp in length
* 204918 206057: gap of unknown length
* 206058 206157: contig of 1040 bp in length
* 206158 207209: gap of unknown length
* 207210 207309: contig of 1052 bp in length
* 207310 209056: contig of 1747 bp in length.

Email: kersli@genome.wi.mit.edu
 Primer A: None
 Primer B: None
 STS size: 421
 Protocol:
 WGS-discovery: Paired-end low-coverage whole genome shotgun reads
 were generated from 129S1/SVIMJ, C3H/HeJ, and BALB/cByJ. The WGS
 reads were placed uniquely on the MGSVC3 C57BL/6J assembly and SNP
 detection was carried out by SSAHA-SNP. 225,000 reads were
 annotated
 as STS and 81,000 SNPs were annotated with alleles from C57BL/6J
 and the strain from which the particular read came. The validation
 rate for these SNPs was estimated at approximately 98%.

On Jun 17, 2003 this sequence version replaced gi:3141865
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC

Web site: <http://www.sanger.ac.uk>
Contact: humquery@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:

Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-2901 is
constructed by the group of Pieter de Jong.

E. coli transposon insertion: The present data does not contain E.
coli transposon sequences which integrated in the
original/previous sequences. We determined the boundary between
the insertion and genomic sequences experimentally, removed the
insertion sequences, reconstituted the present data. The sequencing
project is supported by Japan Science Technology Corporation (JST)

and The Institute of Physical and Chemical Research (RIKEN).

COMMENT
----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help.tmc.edu
----- Project Information
Center project name: MBOR
Center clone name: RP23-181K7
----- Summary Statistics
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 446510 bases at least Q40
Consensus quality: 446869 bases at least Q40
Consensus quality: 453002 bases at least Q20
Estimated insert size: 464853; sum-of-contigs estimation
Quality coverage: 9x in Q20 bases; sum-of-contigs estimation

```

* NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
 * NOTE: This sequence may represent more than one clone.

* NOTE: This is a 'working draft' sequence. It currently
 * consists of 36 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

TITLE Direct Submission

JOURNAL Submitted (12-MAY-2003) Masahira Hattori, The Institute of Physical and Chemical Research (RIKEN), Genomic Sciences Center (GSC); 1-7-22 Suehiro-cho, Tsurumi-Ku, Yokohama, Kanagawa 230-0045, Japan (E-mail: hattori@gsc.riken.go.jp, URL: http://hgp.gsc.riken.go.jp/, Tel: 81-45-503-9111, Fax: 81-45-503-9170)

COMMENT

The Chimpanzee Chromosome 22 Sequencing Consortium consists of:
 *Chinese National Human Genome Center at Shanghai, Shanghai, China;
 *GfF, Dept. of Genome Analysis, Braunschweig, Germany; *Institute of Molecular Biotechnology, Jena, Germany; *KRIIBB Genome Research Center, Daejeon, Korea;
 *Max-Planck-Institute for Molecular Genetics, Berlin, Germany;
 *National Institute of Genetics, Mishima, Japan;
 *National Yang Ming University Genome Research Center, Taipei, Taiwan;
 *RIKEN Genomic Sciences Center, Yokohama, Japan.

Center project name: The Chimpanzee Chromosome 22 Sequencing Project
 Center clone name: PTB-020H02

Sequencing vector: pUC18, pUC13, pTZ19; 100% of reads Chemistry: Dye-terminator Big Dye and ET; 100% of reads Assembly program: Phrap; version 0.990329

Consensus quality: 145,593 bases at least Q40
 Consensus quality: 36 bases at least Q30
 Consensus quality: 4 bases at least Q20

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Source information:
 The RCI-43 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
 http://www.chori.org/bacpac/mechimp3.htm.
 The clone may be obtained from Pieter J. de Jong and coworkers (http://www.chori.org/bacpac).

VECTOR: pBACe3.6
 The CHORI-251 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
 http://www.chori.org/bacpac/chimpanzee251.htm.
 The clone may be obtained from Pieter J. de Jong and coworkers (http://www.chori.org/bacpac).

VECTOR: pFRABAC2.1
 The PFI1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.
 Clones may be obtained from Aaso Fujiyama and co-workers (http://www.gsc.riken.go.jp).
VECTOR: pKSI45

The PTF22 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.
 Clones may be obtained from Aaso Fujiyama and co-workers (http://www.gsc.riken.go.jp).
VECTOR: pKSI43

Sequence Quality Assessment:
 This entry has been annotated with sequence estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 24 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
* as soon as it is available and the accession number will
* be preserved.

Project Information
Center project name: chr-7
Center clone name: RP11-379H18 (djs74)

Summary Statistics
Assembly program: Phrap; version 0.990319
Consensus quality: 160261 bases at least Q40
Consensus quality: 160614 bases at least Q30
Consensus quality: 160723 bases at least Q20
Insert size: 160732; sum-of-contigs
Quality coverage: 8.0x in Q20 bases; sum-of-contigs

Overlapping Sequences:
5': RP11-356G1 (UMGC:djs54) AC009333, 10610-bp overlap
3': RP11-239C9 (UMGC:djs104) AC007551, 48098-bp overlap

Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.

Quality levels above 40 are expected to have less than
1 error in 10,000 bp. Base-by-base quality values are
not generally visible from the GenBank flat file format
but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:

This sequence has been validated by Multiple Complete Digest
fingerprinting. Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 bp)
are not resolved in the fingerprint and hence do not appear
in the table. There are no significant remaining discrepancies
between the experimental and predicted values. Uniquely ordered
fragments are separated by dashed lines.

COMMENT
Submitted (16-JUN-1999) Drosophila Genome Center, Lawrence Berkeley
Laboratory, MS 64-121, Berkeley, CA 94720, USA
On Feb 28, 2001 this sequence version replaced gi:5670568.
Sequence submitted by:
Berkeley Drosophila Genome Project
Lawrence Berkeley National Laboratory, MS 64-121
Berkeley, CA 94720

This sequence was assembled using end sequences from a whole genome
shotgun and from subclones of this BAC and its neighboring clones.
For further information about this sequence, including its location
and relationship to other sequences, please visit our sequence
archive Web site (<http://www.fruitfly.org/sequence/>) or send email
to bdg@fruitfly.berkeley.edu.

COMMENT	On Oct 21, 2003 this sequence version replaced gi:29122869.			

Genes were predicted from the integrated results of the following:

GENSCAN (<http://CCR-081.mit.edu/GENSCAN.html>), GENESH (<http://www.softberry.com/>), Genemark (<http://opal.biology.gatech.edu/Genemark/>), Glimmer (http://www.tigr.org/tdb/glimmer/glmr_form.html), RiceHMM (<http://rnp.dna.affrc.go.jp/RiceHMM/>), SplicePredictor (<http://bioinformatics.lasarte.edu/cgi-bin/sp.cgi>), SIm4 (<http://www.tigr.org/software/glimmer/>), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (<ftp://ncbi.nlm.nih.gov/blast/db>) and the cDNA sequence database at RGP or DBJ. Protein homologues of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence. The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OSJNB0005C03 clone has an overlap with B1063H10 (DBJ: AP005095) clone at 5' end and with B117C04 (DBJ: AP006158) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rnp.dna.affrc.go.jp/GenomeSeq.html>.

	Direct Submission			
	Submitted (15-NOV-1998)			
	Research, 320 Charles Street, Cambridge, MA 02141, USA			
	On Nov 15, 1998 this sequence version replaced g1:368742.			
	All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)			
	http://ftp.genome.washington.edu/RM/RepeatMasker.html			
	Only the first 170030 base pairs of this clone are being submitted. The remainder overlaps accession number AC004139 (WICGR project L291).

Summary Statistics
Sequencing vector: N/A
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 990315
Consensus quality: 152033 bases at least Q40
Consensus quality: 163535 bases at least Q30
Consensus quality: 165256 bases at least Q20
Insert size: 170446; sum-of-coverage
Quality coverage: 4.3x in Q20 bases; sum-of-coverage

```

* NOTE: This is a 'working draft' sequence. It currently
* consists of 22 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

New recombinant DNA construct, useful for improving plant tolerance to

cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or

pests, for conferring increased resistance to plant disease, or for

improving yield.

Claim 1; SEQ ID NO 29775; 15pp; English.

The invention describes a recombinant DNA construct comprising a

polynucleotide consisting of a sequence encoding an amino acid sequence

available in electronic form from the US patent office at

ftp.segdata.uspto.gov/sequence.html?docid=2004034888. The polynucleotide

of the invention are also useful in physical arrays of molecules and as

plant breeding markers. The recombinant DNA construct is useful for

improving plant tolerance to cold, heat, drought, herbicides, extreme

osmotic conditions, pathogens or pests, for manipulating growth rate in

plant cells by modification of the cell cycle pathway, for conferring

increased resistance to plant disease, for producing galactomannan,

lignin or plant growth regulators, for increasing the rate of homologous

recombination in plants, for improving yield by modification of

photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake

or by providing improved plant growth and development under at least one

stress condition or for modifying seed oil or protein yield and/or

content. This sequence represents a plant full length insert

polynucleotide that can be used in the recombinant DNA construct of the

invention.

XX
PT New isolated G-protein coupled receptor useful for identifying modulators
XX protein and for identifying compounds that modulate receptor activity.
XX
PS Claim 4; SEQ ID NO 28; 130pp; English.
XX
XX The invention describes an isolated protein (I) consisting or comprising
CC an amino acid sequence selected from fully defined 66 G-protein coupled
CC receptor amino acid sequences (SI), as given in the specification, an
CC allelic variant of (SI), an orthologue of (SI) or fragment of (SI). (I)
CC is useful for identifying an agent that binds to (I) which comprises
CC contacting the protein with an agent and assaying the contacted mixture
CC to determine whether a complex is formed with the agent bound to the
CC protein. (I) is useful for identifying modulators as potential
CC insecticides, to determine the biological activity of the protein (a
CC panel of multiple proteins for high-throughput screening), as targets for

CC identifying agents for use in human drugs and for identifying compounds
CC that modulate receptor activity. An antibody (II) that selectively binds
CC to (I) is useful for assessing normal and aberrant subcellular
CC localisation of cells and monitoring a treatment modality. A nucleic acid
CC (III) encoding (I) is useful for drug/insecticide screening to identify
CC compounds that modulate G-protein coupled receptor (GPCR) nucleic acid
CC expression, diagnostic assays for qualitative changes in GPCR nucleic
CC acid that lead to insecticidal activity/tolerance, to detect mutations in
CC GPCR genes and gene expression products such as mRNA, and as
CC hybridisation probes for determining the presence, level, form and
CC distribution of nucleic acid expression. A host cell comprising a vector
CC containing (III) is useful for conducting cell-based assays involving the
CC GPCR protein or its fragments, and identifying GPCR protein mutants. This
CC sequence encodes a fruit fly G-protein coupled receptor (GPCR).

 PT genes and oncogenes, useful in designing primers and probes for analyzing
 PT diseases associated with cytosine methylation state e.g. cancer.
 XX
 PS Claim 1; SEQ ID NO 160; 27pp; English.
 XX

CC The invention relates to a nucleic acid comprising a sequence of 18
 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
 CC bisulphite, of genes associated with tumour suppression and oncogenes
 CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
 CC 500 are missing from the sequence listing) sequences (Ss) and sequences
 CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
 CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
 CC probes for detecting the cytosine methylation state and/or single
 CC nucleotide polymorphisms and also to be used in an array for analysing
 CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
 CC probes can also be used in a method for ascertaining genetic and/or
 CC epigenetic parameters for the diagnosis and/or therapy of existing
 CC diseases or the predisposition to specific diseases, by analysing
 CC cytosine methylations. The parameters may be compared to another set of
 CC genetic and/or epigenetic parameters, the differences serving as basis
 CC for diagnosis and/or prognosis events which are disadvantageous to
 CC patients. The present sequence is one of the 533 genomic sequences
 CC derived from tumour suppressor genes and oncogenes. Sequences with even
 CC numbered Seq ID numbers are the complementary sequence of the
 CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
 CC 533, except for those whose partner sequence is missing). Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX Claim 1; SEQ ID NO 116; 9pp; English.
PS
XX
XX The invention relates to a nucleic acid comprising at least 18 bases from
CC a segment of the chemically pretreated DNA of genes associated with
CC metastasis, i.e. any of ADS99709-ADS99906 human genomic sequences or any
CC of the 19 sequences appearing as ADS99911-ADS99929. SEQ ID 2,4,6 etc are
CC the complements of SEQ ID 1,3,5, etc. Also included are an oligomer
CC (particularly an oligonucleotide or peptide nucleic acid) comprising at
CC least one base sequence of at least 9 bases which hybridises to (or is
CC identical with) the sequences referred to above, producing an array of
CC the oligomers on a carrier, obtaining genetic and/or epigenetic
CC parameters for diagnosis and/or therapy of diseases (or predisposition to
CC them) by analysis of cytosine methylation and a kit comprising a
CC bisulphite (disulphite or hydrogen sulphite) and the oligomers. In the
CC method of above 5-unmethylated cytosines in a genomic DNA sample are
CC converted chemically to uracil, or another base with hybridisation
CC properties different from those of cytosine, then fragments of the
CC treated DNA amplified (particularly by polymerase chain reaction) using
CC the oligomers and a polymerase (preferably heat stable) to produce
CC labelled amplicons. These are tested for hybridisation to an array of
CC oligomers and any hybridisation detected. The amplicons are labelled with
CC fluorescent or radioactive markers, or with a detachable mass marker to
CC allow their detection by mass spectrometry, specifically using the matrix
CC -assisted laser desorption/ionisation (MALDI) or electrospray techniques.
CC To improve detection in the mass spectrometer, fragments formed in the
CC instrument have only a single net charge (positive or negative). The
CC genomic DNA is from e.g. a cell line, biopsy sample, blood, or paraffin-
CC embedded tissue sample. Oligonucleotides or peptide-nucleic acids that
CC are complementary to (or identical with) parts of the nucleic acids listed
CC above may be used as primers for amplification of the nucleic acids or
CC their complements, and for determining cytosine methylation status and/or
CC single nucleotide polymorphisms in metastasis-related genes. They can be
CC used for analysis of diseases associated with methylation of CpG
CC dinucleotides and to determine (epi)genetic parameters for diagnosis
CC and/or therapy of disease (or predisposition). The genomic DNA sequences
CC are useful for diagnosis and therapy of solid tumours and cancer. The
CC present sequence is the complementary sequence to a bisulphite treated
CC human gene associated with metastasis. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?docid=20030148327.

 PS Disclosure; SEQ ID NO 1774; 980bp; English.
 XX
 CC The invention relates to isolated nucleic acid molecules and their
 CC encoded secreted proteins. The nucleic acids and proteins are used to
 CC prevent, treat or ameliorate a medical condition in e.g. humans, mice,
 CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used
 CC in diagnosing a pathological condition or susceptibility to a
 CC pathological condition. Antibodies to the proteins can also be used in
 CC alleviating symptoms associated with the disorders and in diagnostic
 CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays
 CC (ELISA). Disorders which are diagnosed or treated include autoimmune
 CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.
 CC neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac
 CC arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiodysplasia,
 CC nervous system disorders e.g. Alzheimer's disease, infections caused by
 CC bacteria, viruses and fungi and ocular disorders e.g. corneal infection,
 CC and many other disorders listed in the specification. The polypeptides
 CC can also be used to aid wound healing and epithelial cell proliferation,
 CC to prevent skin aging due to sunburn, to maintain organs before
 CC transplantation, for supporting cell culture of primary tissues, to
 CC regenerate tissues and in chemotaxis. The polypeptides can also be used
 CC as a food additive or preservative to increase or decrease storage
 CC capabilities, fat content, lipid, protein, carbohydrate, vitamins,
 CC minerals, cofactors and other nutritional components. The present
 CC sequence is a genomic DNA encoding a partial novel secreted protein of
 CC the invention. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.

XX Disclosure; SEQ ID NO 33472; 3071bp + Sequence Listing; English.

XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytotoxic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK7664 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

CC	AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)	
CC	amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic	
CC	activity, and can be used in gene therapy and vaccine production. (I)	
CC	proteins and polynucleotides may be used in the prevention, diagnosis and	
CC	treatment of diseases associated with inappropriate (I) expression. For	
CC	example, they may be used to treat disorders associated with decreased	
CC	expression by rectifying mutations or deletions in a patient's genome	
CC	that affect the activity of (I) by expressing inactive proteins or to	
CC	supplement the patients own production of (I). Additionally, (I)	
CC	polynucleotides may be used to produce the secreted (I), by inserting the	
CC	nucleic acids into a host cell and culturing the cell to express the	
CC	protein. (I) proteins and polynucleotides may be used to prevent,	
CC	diagnose and treat immune/haematopoietic-related diseases, especially	
CC	cancers and cancer metastases of haematopoietic-derived cells. AAK64703	
CC	to AAK87694 represent human immune/haematopoietic antigen genomic	
CC	sequences from the present invention. AAK54942 to AAK54950 and AAK62169	
CC	represent sequences used in the exemplification of the present invention

XX
XX New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
XX Claim 14; SEQ ID NO 7627; 1766bp; English.
XX
XX The invention relates to an isolated nucleic acid comprising any one of
CC the 623 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target
CC prokaryotic essential genes. Note: the sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX Claim 1; SEQ ID NO 220; 0bp; English.
PS
XX
XX The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

PT Proteins encoded by chromosome 2 of the human malarial parasite,
PT Plasmodium falciparum, useful as antimalarial vaccines and in the
PT diagnosis of P.falciparum infection.
XX
PS Disclosure; Page 496-497; 577pp; English.
XX
CC The present invention describes proteins and their fragments (I) encoded
CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC (II) are useful for the development of vaccines against P. falciparum
CC infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC immunogens comprising the sequences of (I), are useful in the detection
CC of infection with P. falciparum. Furthermore, (I) (especially when they
CC are rifins or secreted or membrane proteins) can aid the identification
CC of drugs to treat or prevent P. falciparum infection, or they can be used
CC to identify drug resistance in P. falciparum. Sequencing of the
CC Plasmodium chromosome 2 and the subsequent identification of proteins
CC encoded by it will help to expand our understanding of parasite biology,
CC a process hampered by the complexity of the parasitic lifecycle, and
CC provide new targets for vaccine and drug development. Parasite resistance
CC to drugs and mosquito resistance to insecticides have led to a resurgence
CC of malaria in many parts of the world, and there is a pressing need for
CC vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC represent nucleotide and protein sequences given in the present
CC invention, but which are not specifically mentioned within the
CC specification

PS Claim 1; Page 3238; 3695pp; English.
XX
CC The invention relates to human breast cancer expressed polynucleotides
CC (AAL07544-AAL26789) and methods of assessing whether a patient is
CC afflicted with breast cancer by examining the correlation between the
CC expression of certain markers and the cancerous state of breast cells.
CC The polynucleotides and encoded polypeptides are potential markers for
CC detecting, diagnosing, monitoring, characterizing treating and
CC potentially preventing breast cancer. The polynucleotides and encoded
CC polypeptides are also useful for isolating compounds with cytostatic
CC activity

 XX
 PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.
 XX
 PS Disclosure; SEQ ID NO 26851; 3071pp + Sequence Listing; English.
 XX
 CC AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
 CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
 CC activity, and can be used in gene therapy and vaccine production. (I)
 CC proteins and polynucleotides may be used in the prevention, diagnosis and
 CC treatment of diseases associated with inappropriate (I) expression. For
 CC example, they may be used to treat disorders associated with decreased
 CC expression by rectifying mutations or deletions in a patient's genome
 CC that affect the activity of (I) by expressing inactive proteins or to
 CC supplement the patient's own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/hematopoietic-related diseases, especially
 CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/hematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
 CC represent sequences used in the exemplification of the present invention

 PT Novel isolated nucleic acid molecule associated with cancerous state of
 PT prostate cells and correlating with presence of prostate cancer, useful
 PT for detecting presence of prostate cancer, stage of prostate cancer.
 XX
 PS Claim 1; Page 1731; 11750pp; English.
 XX
 CC The invention relates to an isolated nucleic acid molecule (I) comprising
 CC a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the
 CC specification or its complement. (I) is useful for: (a) assessing whether
 CC a patient is afflicted with prostate cancer; (b) monitoring the
 CC progression of prostate cancer in a patient; (c) assessing the efficacy
 CC of a test compound to inhibit prostate cancer in a patient; (d) assessing
 CC the efficacy of a therapy for inhibiting prostate cancer in a patient;
 CC (e) selecting a composition for inhibiting prostate cancer in a patient;
 CC (f) assessing the prostate cell carcinogenic potential of a compound; (g)
 CC determining whether prostate cancer has metastasized in a patient; (h)
 CC assessing the aggressiveness or indolence of prostate cancer in a patient
 CC ; (I) is also useful as a pharmacodynamic or pharmacogenomic marker

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX
PS Claim 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX
PS Claim 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PS Claim 1; Page 362-363; 419pp; English.
XX
CC The polynucleotide sequences given in AAC59449 to AAC59497 encode the
CC human secreted proteins given in AAB34092 to AAB34140. AAB34141 to
CC AAB34216 represent human secreted polypeptide sequences and proteins
CC homologous to them, which are given in the exemplification of the present
CC invention. Human secreted proteins have activities based on the tissue
CC and cells the genes are expressed in. Examples of activities include:
CC antiarthritic; immunosuppressive; antirheumatic; antiproliferative;
CC cytostatic; cardiant; vasotropic; cerebroprotective; nootropic;
CC neuroprotective; antibacterial; virucide; fungicide; ophthalmological;
CC and vulnerary. The polynucleotides and polypeptides can be used to
CC prevent, treat or ameliorate a medical condition in e.g. humans, mice,
CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used
CC in diagnosing a pathological condition or susceptibility to a
CC pathological condition. Disorders which are diagnosed or treated include
CC autoimmune diseases, hyperproliferative disorders e.g. neoplasms or
CC cancer of the breast or liver, cardiovascular disorders, cerebrovascular
CC disorders, angiogenesis, nervous system disorders, infections caused by
CC bacteria, viruses and fungi and ocular disorders. The polypeptides can
CC also be used to aid wound healing and epithelial cell proliferation, to
CC prevent skin aging due to sunburn, to maintain organs before
CC transplantation, for supporting cell culture of primary tissues, to
CC regenerate tissues and in chemotaxis. The polypeptides can also be used
CC as a food additive or preservative to increase or decrease storage
CC capabilities. AAC59440 to AAC59448 and AAB34091 represent sequences used
CC in the exemplification of the present invention

PS New stress-responsive nucleic acid, useful for altering the

PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold

XX stress, salt stress or osmotic stress.

PS Claim 48; SEQ ID NO 13513; 89pp; English.

XX The invention relates to novel abiotic stress responsive polynucleotides

CC and polypeptides. Also disclosed are vectors, expression cassettes, host

CC cells, and plants containing such polynucleotides. Also disclosed are

CC methods for using the polynucleotides and polypeptides to alter the

CC responsiveness of a plant to abiotic stress. The invention is useful in

CC agriculture. The nucleic acid is useful for determining whether a test

CC plant has been exposed to an abiotic stress condition. It is also useful

CC for selecting an agent that alters abiotic stress regulated

CC polynucleotide expression in a plant cell, and to identify a homolog or

CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid

CC molecule and the polypeptide encoded by it are useful in altering the

CC responsiveness of a plant to an abiotic stress, such as cold stress, salt

CC stress, osmotic stress or any of their combinations. The present sequence

 PT comprises transgene encoding exogenous wild-type or constitutively-active
 PT mutant alpha1A, alpha1B or alpha1D adrenergic receptor.
 XX
 PS Example 1; Fig 2; 47pp; English.
 XX
 CC The invention relates to a transgenic animal having integrated within its
 CC genome a transgene encoding an exogenous wild-type or constitutively-
 CC active mutant alpha1A, alpha1B or alpha1D adrenergic receptor. The
 CC transgene is operably linked to a promoter that drives expression of the
 CC transgene in cells innervated by the sympathetic nervous system, and the
 CC transgenic animal exhibits an abnormal phenotype. The transgenic animal
 CC is useful for screening for a compound which modulates function of
 CC alpha1BAR, by administering the compound to the animal, and assaying for
 CC changes in the abnormal phenotype. The animal exhibits neurodegenerative
 CC symptoms or symptoms of a cardiovascular disorder, and the assay involves
 CC assaying for an improvement in or delay in progression of the symptoms,
 CC or evaluating the locomotor activity of the animal. The transgenic animal
 CC is also useful for screening a drug for activity against a
 CC neurodegenerative disorder, such as Parkinson's disease, or a
 CC cardiovascular disorder. The present sequence is the promoter of the
 CC murine alpha1B adrenergic receptor

XX
PT New nucleic acid derived from chemically treated metastasis genes, useful
PT for diagnosis of cancers by analysis of cytosine methylation, also for
PT treatment.
XX
PS Claim 1; SEQ ID NO 59; 9pp; English.
XX
XX The invention relates to a nucleic acid comprising at least 18 bases from
CC a segment of the chemically pretreated DNA of genes associated with
CC metastasis, i.e. any of ADS99709-ADS99906 human genomic sequences or any
CC of the 19 sequences appearing as ADS99911-ADS99929. SEQ ID 2,4,6 etc are
CC the complements of SEQ ID 1,3,5, etc. Also included are an oligomer
CC (particularly an oligonucleotide or peptide nucleic acid) comprising at
CC least one base sequence of at least 9 bases which hybridises to (or is
CC identical with) the sequences referred to above, producing an array of
CC the oligomers on a carrier, obtaining genetic and/or epigenetic
CC parameters for diagnosis and/or therapy of diseases (or predisposition to
CC them) by analysis of cytosine methylation and a kit comprising a
CC bisulphite (disulphite or hydrogen sulphite) and the oligomers. In the
CC method of above 5-unmethylated cytosines in a genomic DNA sample are
CC converted chemically to uracil, or another base with hybridisation
CC properties different from those of cytosine, then fragments of the
CC treated DNA amplified (particularly by polymerase chain reaction) using
CC the oligomers and a polymerase (preferably heat stable) to produce
CC labelled amplicons. These are tested for hybridisation to an array of
CC oligomers and any hybridisation detected. The amplicons are labelled with
CC fluorescent or radioactive markers, or with a detachable mass marker to
CC allow their detection by mass spectrometry, specifically using the matrix
CC assisted laser desorption/ionisation (MALDI) or electrospray techniques.

CC To improve detection in the mass spectrometer, fragments formed in the
CC instrument have only a single net charge (positive or negative). The
CC genomic DNA is from e.g. a cell line, biopsy sample, blood, or paraffin-
CC embedded tissue sample. Oligonucleotides or peptide-nucleic acids listed
CC are complementary to (or identical with) parts of the nucleic acids listed
CC above may be used as primers for amplification of the nucleic acids or
CC their complements, and for determining cytosine methylation status and/or
CC single nucleotide polymorphisms in metastasis-related genes. They can be
CC used for analysis of diseases associated with methylation of CpG
CC dinucleotides and to determine (epi)genetic parameters for diagnosis
CC and/or therapy of disease (or predisposition). The genomic DNA sequences
CC are useful for diagnosis and therapy of solid tumours and cancer. The
CC present sequence is a bisulphite treated human gene associated with
CC metastasis. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html?docID=20030148327.

PT methylation.
XX
XX Claim 1, SEQ ID NO 1394, 32pp + Sequence Listing; German.
XX
XX The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders.

CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 20232; 3071bp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
XX amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patient's own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/hematopoietic-related diseases, especially
XX cancers and cancer metastases of hematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/hematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAM82169
XX represent sequences used in the exemplification of the present invention

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI, 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 20233; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK67694 represent human immune/hematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

XX
XX Novel human cancer associated protein encoded within open reading frame
XX of cancer associated gene, useful as targets for diagnosing cancer.
XX
XX Claim 16; SEQ ID NO 590; 182pp; English.
XX
XX The invention relates to cancer-associated proteins (CAP) and the cancer-
XX associated (CA) nucleic acids encoding them. The invention also relates

CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a human CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX Nucleic acid array useful for detecting cancer associated nucleic acid,
XX comprises two or more nucleic acid probes.
XX Disclosure; SEQ ID NO 446; 198bp; English.

CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents murine cancer-associated genomic DNA of
CC the invention.

XX Polynucleotide(s) and proteins derived from Staphylococcus aureus -
XX stored on computer readable medium and used in the production of anti-
XX S.aureus vaccines.
XX Claim 1; Page 1942; 3271bp; English.

CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences
CC of the invention. The DNA sequences are recorded on a computer readable
CC medium, preferably selected from a floppy or hard disk, random access
CC memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
CC the S.aureus DNA sequences allows putative functions to be assigned so
CC that protein-encoding or regulatory regions of commercial, therapeutic or
CC industrial importance can be obtained. Specifically, sequences which are
CC likely to encode antigens have been identified and these polypeptides can
CC be used in a vaccine composition against S.aureus infection. The
CC polypeptides can also be used in a kit for the immunodetection of
CC S.aureus in a sample. S.aureus is implicated in numerous human diseases,
CC including cellulitis, eyelid infections, food poisoning, osteomyelitis,
CC skin and surgical wound infections, scalded skin syndrome, toxic shock
CC syndrome, etc. Organisms transformed with the DNA sequences can be used
CC for recombinant production of the polypeptides. The new DNA sequences
CC (and their fragments) are useful as primers or probes for isolating
CC homologues of any of the S.aureus DNA sequences contained on the computer
CC readable medium

PT Identifying a candidate polymorphic repeat within a coding sequence, for
PT understanding or treating genetic disease, comprises detecting tandem
PT repeats in a target coding sequence and scoring the repeats for
PT polymorphic probability.
XX
PS Example; Col 143; 588bp; English.
XX
CC The invention discloses a method for identifying a candidate polymorphic
CC repeat within a coding sequence (expressed sequence tag, EST), which
CC comprises detecting tandem repeats in a target coding sequence, scoring
CC the repeats for polymorphic probability and generating a dataset
CC correlating the repeats with polymorphic probability to identify a
CC candidate polymorphic repeat. The computational methods (polymorphic
CC marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
CC useful for identifying and detecting candidate polymorphic repeats in
CC human genes, which can be used to understand, treat or eliminate genetic
CC diseases, predispositions or adverse drug-treatment reactions. Examples
CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
CC syndrome, Huntington's disease, fragile-X syndrome, Friedrich's ataxia,
CC myotonic dystrophy, hyperandrogenemia, spinal and bulbar atrophy and
CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
CC the polymorphic repeats identified for a search of human ESTs

Naming Conventions: EST name is generated by the concatenation of the UGI Clone id and the direction of sequencing. The suffix '.fwd' indicates a forward sequencing read of the insert. It does not necessarily reflect the orientation of the insert.
 Small Insert: Based upon one or more sequencing reads of this clone where vector sequence was present at both ends, this clone has been determined to contain a cDNA insert on the order of 600-1000 bases.

Method 2'. The numerical designation after the 52 refers to the microfilter tray number (01 - 48) followed by the letter and number of the microfilter tray position. Method '2' refers to sequenced clones which have been selected after hybridization subtraction using highly redundant clones present in the gridded library (18,000 mass-excised colonies gridded as a high density array on nylon filters). Colonies not represented in the probe sets were used as templates for the sequencing reactions.
 Seq primer: pBluescript SK.

/note="Vector: pBACindigo; Site_1: EcoRI; Site_2: EcoRI;
Rice is the most important food crop in the world. Half of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate. Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety using EcoRI as the cloning enzyme. The library contains 55,296 clones with an average insert size of 121 Kb providing approximately 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University

ORIGIN BAC/EST Resource Center (www.genome.clemson.edu)."

/note="Vector: pGEM-3Z; Site 1: EcoICRI; Site 2: EcoICRI; The cDNA library was obtained from one month old Douglas-fir seedlings. Total RNA was extracted from ~5 g of ground tissue that consisted of the mixture of 10 seedlings following the protocol described in Chang et al. (1993). mRNA was isolated from the total RNA using the PolyAtract mRNA Isolation System III (Promega Z5300). Double stranded cDNA was prepared using the Universal Ribocloner cDNA Synthesis System (Promega C4360) and filtered through a Sephadryl S-400 column to remove low molecular weight products of less than 300 bp. Double-stranded blunt-end cDNA was ligated into the EcoICRI-cut dephosphorylated pGEM-3Z sequencing vector and electroporated into E. coli DH5 alpha. cDNA clones were sequenced by Integrated Genomics, Inc. (Chicago, USA)."

/note="Vector: lambda Uni-ZAP XR, excised phagemid; Site 1: EcoRI; Site 2: XhoI; Plant materials were prepared by Federici (Roose lab) with advice from Parker. Seedlings 138 days after sowing were about 20-23 cm in height, bearing 8-12 leaves. On May 26, 2004, plants were washed free of soil with a stream of water, then placed upright with the roots submerged in two tanks of nutrient solution. The solution was sufficient in all major and minor nutrients and buffered with MES at about pH 6.95. The plants were maintained in this until June 14, 2004, when the solution was changed to one with only 20 micromolar iron, chelated with EDTA to induce iron deficiency. The pH was maintained at 6.99 by sodium carbonate/CO2 buffering. This solution was replaced on July 6, 2004. Roots from three plants were sampled on June 16, June 21, July 1 and July 28, 2004. Roots were collected by removing the plant from the nutrient solution, blotting off excess moisture with a paper towel, then cutting off the top of the plants. Three plants were pooled in one aluminum foil packet, and frozen between two sheets of dry ice. The time between removal from solution and freezing on dry ice did not exceed one minute. The frozen tissue was stored in these foil packs at -80°C. This sampling strategy did not correspond to initiation of stress in the plant, but only to when the plants entered the low iron solution. The actual stress was not initiated until the internal iron reserve was depleted. By the July 1 sampling date, slight iron deficiency symptoms were apparent. By the final sampling date, clear iron deficiency symptoms were present. By the July 1 sampling date, the roots showed growth of *Thielaviopsis brevicola*, a fungus. Other than what came away when the roots were blotted with paper towels, no effort was made to remove the fungus because it is not just a surface contaminant, but grows within the roots as well. Mandal and Fenton (Close lab) purified RNA using TRIzol, poly(A) mRNA using an Oligotex mRNA Kit (Qiagen), produced a primary cDNA library using a lambda ZAP XR cDNA Synthesis Kit (Stratagene), then mass-excised 0.5 million pfu from the primary library to produce a phagemid population. The library was made from equal portions of RNA from each of the four collection dates. Phagemids were placed, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3730 at DNA Landmarks (Landry, Hubert, Laforest, Landry, Ligonde). Chromatogram files were downloaded by FTP by Close, then processed by Wamamaker (Close lab) using the Harvest pipeline (<http://harvest.ucr.edu>) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a pruned 17 region of at least 100 bases were assembled, then chimeras were removed following manual inspection of assemblies (Close, Roose, Wamamaker). Sequences that survived all removal steps were submitted to Genbank."

/note="Vector: pBluescript II SK+; Site 1: EcoRI; Site 2: XhoI; The cDNA library was constructed from mRNA isolated from 2-3 week old seedlings that were induced for symptoms of SDS (Sudden Death Syndrome) disease by the translocation of culture filtrate of Fusarium solani f. sp. glycines (Plant Cell Report 18:375-380). Cultivar Williams 82 is susceptible to the disease SDS. Plant tissue (expanded leaves, folded leaves, and new shoots) were collected at 1, 6, 24, and 48 hrs. after inoculation and their mRNA pooled equally for cDNA construction. The library was prepared using the Stratagene pBluescript II SK(+) library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with an XhoI restriction site. EcoRI adaptors were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA insert is protected from XhoI digestion via methylation during first strand synthesis. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli Electromax DH10B host cells. Plants were inoculated by Shuxian Li (Glen Hartman lab, University of Illinois). Library was constructed by Reena Philip and Steve Clough

ORIGIN (Lila Vodkin lab, University of Illinois)."

/note="The library Gm-r1070 is a sequence-driven, rerecked set of 9,216 clones selected for development of soybean that various tissues and stages of development of soybean that represent 2,639 sequences from immature cotyledons, 1,770 from immature seed coats, 3,938 from flowers, and 869 from young pods. The 5' ESTs of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were rerecked to form library Gm-r1070. The cDNA clones of the rerecked Gm-r1070 library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://www.cbc.umn.edu/ResearchProjects/Soybean/index.html
Rerecking was performed by Genome Systems, St. Louis, http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics, University of Illinois, http://www.life.uiuc.edu/biotech/keck.html. Note: The

corresponding 5' EST from each clone in the Gm-r1070 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'.

/note="Vector: pMD29ny. Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adapted DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pMD42 (gi14732114|gb|AF129072.1) a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adapted mouse DNA was annealed to
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

/cultiivar="Bragg"
/db_xref="taxon:3847"
/clone="GENOME SYSTEMS CLONE ID: Gm-c1079-1818"
/cissue_type="Roots of 8 day old 'Bragg' seedlings"
/dev_stage="8 days old"
/lab_host="DH10B"
/clone_lib="Gm-c1079"
/note="Vector: pBluescript II SK+, Site 1: EcoRI; Site 2:
XhoI. The mRNA was isolated from roots of 8 day old
'Bragg' seedlings that were mock-infected 72 hours prior
to harvest. Dr. Gary Stacey generously donated the
tissue. The roots were flash-frozen in liquid nitrogen.
Stratagene's cDNA Synthesis Kit (catalog number 200401)
was used to synthesize the cDNA. First-strand synthesis
was performed with 5-methyl dCTP, hence the ligated cDNA
was hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An 'anchor'
nucleotide (V=A, C, or G) was added to the 3' end of the
primer [GAGACAGAGAGAGAGAGACTGCTCAG(T)18V] to anchor
the primer at the 5' end of the poly(A) tract. After
second-strand synthesis, the cDNA ends were filled in with
cloned Pfu DNA, ligated to EcoRI adapters and subsequently
phosphorylated. The cDNA was then precipitated and
redissolved in sterile, RNase-, DNase-free water. The XhoI

site within the first-strand synthesis primer was then
restricted by digestion with XhoI from Promega (40U/ul);
all XhoI sites in the cDNA would be protected by their
hemimethylated status. The cDNA constructs were
size-fractionated with a 500bp cutoff, using Sephacryl
S-500 High Resolution (Pharmacia Biotech) in a 2-mm
diameter column and a bed volume of approximately 1ml. The
column eluent was precipitated, redissolved, and ligated
into Stratagene's pBluescript II XR Predigested vector
(pBluescript II SK(+)) vector that has been digested with
EcoRI and XhoI, and phosphorylated by Stratagene. This
library was constructed in the laboratory of Dr. Paul Kaim
and Dr. Virginia H. Coryell at Northern Arizona
University."

/note="Vector: Lambda Uni-ZAP XR, excised phagemid;
Site 1: EcoRI; Site 2: XhoI; Parent Washington navel
orange embryogenic callus was established from undeveloped
ovules of ca. 10 mm diameter young fruits under open
pollination on Murashige-Skoog medium at 25°C with 16 h
light in a tissue culture room. Embryogenic callus,
globular and heart stage embryoids were pooled in
approximately equal portions in RNAlater (Ambion), then
RNA was extracted using TRIzol Reagent (Invitrogen).
Poly(A) RNA was purified from 500 microgram of total RNA
using Oligen Oligotex. A primary cDNA library was produced
using a lambda ZAP XR cDNA Synthesis Kit (Stratagene).
These steps were performed by Xinrong Ye (Roose lib, UC

Riverside). One million pfu from the primary library were mass excised to produce a phagemid population by Raymond Fenton (Close lab, UC Riverside). Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3730 at DNA Landmarks (Landry, Hubert, Laforest, Landry, Ligonde, (by Close), then processed at UC Riverside (by Wanmaker, (http://harvest.ucr.edu) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were assembled, then chimeras were removed following manual inspection of assemblies (Close, Rose, Federici, Wanmaker, Lyon, Ye, Jang, Collin, Kacar, Ikeda, Quintilio). Sequences that survived all removal steps were submitted to Genbank."

/clone_id="gmrtdNS01"

/note="Vector: pBS II SK(+); Funding: The production of

EST's submitted in this project was funded by MISC Grant

002245 - 'Development and Deployment of Biotechnology tools

for soybean improvement' to H.T. Nguyen as Principal

Investigator. Sample collection and library construction:

Dark grown soybean seedlings with primary roots were

transplanted to high (-0.05MPa) or low water potential

(-1.6MPa) vermiculite, and harvested at 5h and 48h after

transplanting. Each root tip was divided into two segments

(distances are from the junction of root apex and root

cap): segment 1, 0-3mm; and segment 2, 3-11mm. Total RNA

was extracted by the 'hot phenol' method (Plant Molecular

Biology manual. D5: 1-13, 2nd ed., 1997). This method

worked in eliminating carbohydrate material present in the

root tips. The integrity of the RNA was verified by

denaturing agarose gels and spectrophotometry (ratio

A260/280). Poly(A)+mRNA was isolated twice from total RNA

using the Oligotex Direct RNA kit (Qiagen). Poly(A)+ mRNA

was converted to double-stranded cDNA and tagged by using

modified Oligo(dT) primers. The double stranded cDNAs were

size-selected (>500 bp). Size selected cDNAs were

adapted with EcoRI adaptors at both ends, and then

digested with NotI. The cDNA was directionally cloned into

EcoRI-NotI digested pBS II SK(+) phagemid vector

(Stratagene) and electroporated into E.coli DH10B. The

gmrtdNS01 library was created by subtracting the

well-watered soybean root library from the water-stressed

(5h and 48h) soybean root libraries. The double-stranded

plasmid DNA from the primary library was converted to

single-stranded circles and used as a template for PCR

amplification. The purified PCR products, representing the

entire cDNA population cloned were used as a driver for

normalization. Hybridization between the single-stranded

library and the PCR products was carried out for 44 hours

at 300C. Non-hybridized single-stranded DNA circles were

separated from hybridized DNA rendered partially

double-stranded and electroporated into DH10B E. coli.

Clone requests: Requests for clones should be made to Dr.

/clone="CDA95-A05"
/sex="mixed male and female"
/tissue_type="heads and internal organs combined"
/dev_stage="adult"
/clone_1lb="SHGC-CDA"
/note="Vector: lambda ZAP Express/pBK-CMV; Site 1: EcoRI (5' adaptor); Site 2: XhoI (3' linker primer); The mixed organ cDNA library was generated using the ZAP-cDNA method by Stratagene. First strand cDNA synthesis was primed with a 50 bp linker primer containing an oligo dT sequence preceded by a synthetic XhoI site. 5 prime adaptors were used containing an EcoRI cohesive end. The finished cDNAs were inserted in the sense orientation with respect to the lacZ promoter of pBK-CMV. An amplified library was prepared from approximately 3 million primary clones in the lambda ZAP Express vector. In vivo excision was then used to generate individual pBK-CMV phagemid clones for EST sequencing."

isolated from the indicated stickleback tissue, and a cDNA
library was constructed in the Express 1 plasmid vector by
Open Biosystems. First strand cDNA synthesis was primed
with an 54 bp linker primer containing an oligodT sequence
preceded by a synthetic NotI site (first strand primer:
5'-GACGAGTTCGATCGGAGCGGCCGCTT)25-3'). Following
second strand synthesis, cDNAs were made blunt at the end
corresponding to the original 5 prime end of mRNA, and
cloned directionally into the NotI and EcoRV sites of
Express 1. Note that the EcoRV site is typically destroyed
in the blunt end cloning, leaving a junction of the form
'xxxxATC' (where is ATC is the second half of the EcoRV
site, and xxx is derived from the cDNA sequence). A map of
the Express 1 vector is available at:
http://www.openbiosystems.com/cdna_library_construction_fa9.php#8
The primary library was transformed and amplified
in DH10B (T1 phage resistant) bacteria. Clones available
from Open Biosystems:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 TITLE Initial Sequence of the Chimpanzee Genome and Comparison with the
 Human Genome
 COMMENT Unpublished (2005)

Contact: Michael C. Zody
 Broad Institute of MIT and Harvard
 320 Charles Street, Cambridge, MA 02141, USA
 Tel: 6172580933
 Fax: 6172580903
 Email: mczody@broad.mit.edu
 Primer A: No sequence submitted
 Primer B: No sequence submitted
 STS size: 719
 Protocol:

23,021,928 chimpanzee whole genome shotgun reads were aligned to
 the Human genome NCBI
 Build 34 (Hg16, July 2003). Chimp WGS reads were from 9 donors,
 including Clint (Pan
 (Donald, Karlén, Yvonne), 3 Pan
 troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps
 of unknown origin

(don, Unknown Chimp). Common names: Pan troglodytes versus is the
 western chimp and Pan
 troglodytes troglodytes is the central chimp. To be included in
 chimpanzee SNP discovery, a
 read must be at least 500bp in length, at least 50% of its base
 calls must have phred
 score >= 20, at least 30% of its base calls must satisfy
 SNQS(30,25) (single strand NQS, the
 base in question has phred score >= 30, the surrounding 10 bases in
 the read have phred
 score >= 25), and the read must have at least 200 bp SNQS(30,25)
 bases. Reads not uniquely
 placed in the genome and read pairs whose two ends were not
 consistently placed were
 discarded. After above filtering, NQS(30,25) standard was applied
 to all pairs of
 overlapping reads to call NQS bases and SNPs. Alignments (between
 two reads) with less
 than 100 NQS bases or with SNP rate > 0.01 were discarded. To
 exclude alignment between two
 copies of a single read, comparisons between two reads that share
 95% of their genome
 alignments (>=95% bases of read A and >=95% bases of read B were
 placed at the same locus
 of human genome) were discarded.

Submitted (11-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 146608)
Rat Genome Sequencing Consortium.

Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 19, 2002 this sequence version replaced gi:23267305.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated

by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GT1Y
Center clone name: CH230-122124
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 14314 bases at least Q40
Consensus quality: 144271 bases at least Q30
Consensus quality: 144860 bases at least Q20
Estimated insert size: 14193; sum-of-contigs estimation
Quality coverage: 8x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preselected.

1 104033: contig of 104033 bp in length
* 104034 104133: gap of unknown length
* 104134 140217: contig of 36084 bp in length
* 140218 140317: gap of unknown length
* 140318 146608: contig of 6291 bp in length.

REFERENCE AUTHORS TITLE JOURNAL

of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 237844)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:25008275.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

COMMENT

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GHXB
Center clone name: CH230-108020
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 198885 bases at least Q40
Consensus quality: 203692 bases at least Q30
Consensus quality: 206750 bases at least Q20
Estimated insert size: 212383; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 232734: contig of 232734 bp in length
* 232735 232834: gap of unknown length
* 232835 237844: contig of 5010 bp in length.

           Primer A: No sequence submitted
           Primer B: No sequence submitted
           STS size: 904
           Protocol:
           23,021,928 chimpanzee whole genome shotgun reads were aligned to
           the Human genome NCBI
           Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,
           including Clint (Pan
           troglodytes versus), 3 other Pan troglodytes versus chimps

```

```

(Donald, Karlén, Yvonne), 3 Pan
troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps
of unknown origin
(Gon, Unknown Chimp). Common names: Pan troglodytes versus is the
western chimp and Pan
troglodytes troglodytes is the central chimp. To be included in
chimpanzee SNP discovery, a
read must be at least 500bp in length, at least 50% of its base
calls must have Phred
score >= 20, at least 30% of its base calls must satisfy
SNOS(30,25) (single strand NOS, the
base in question has Phred score >= 30, the surrounding 10 bases in
the read have Phred
score >= 25), and the read must have at least 200 bp SNOS(30,25)
bases. Reads not uniquely
placed in the genome and read pairs whose two ends were not
consistently placed were
discarded. After above filtering, NOS(30,25) standard was applied
to all pairs of
overlapping reads to call NOS bases and SNPs. Alignments (between
two reads) with less
than 100 NOS bases or with SNP rate > 0.01 were discarded. To
exclude alignment between two
copies of a single read, comparisons between two reads that share
95% of their genome
alignments (>=95% bases of read A and >=95% bases of read B were
placed at the same locus
of human genome) were discarded.

AUTHORS Lamerdin,J.E.
TITLE Direct Submission
JOURNAL Submitted (06-SEP-1998) Joint Genome Institute, Lawrence Livermore
National Laboratory, 7000 East Ave., Livermore, CA 94551, USA
Map and sequence oriented from q centromere to telomere. Cosmid
R29124 overlaps cosmid F6697 to the left by at least 6 kb and is
expected to overlap cosmid R32065 to the right by approximately 5
kb. Additional chr 19 map and sequence information are available
at: http://www-bio.lnl.gov/genome/genome.html.

COMMENT

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Oct 12, 2002 this sequence version replaced gi:21909369.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information -----

Center project name: GYNS
Center clone name: CH230-233K11

----- Summary Statistics -----

Assembly program: Phrap; version 0.990329
Consensus quality: 249289 bases at least Q40
Consensus quality: 256050 bases at least Q30
Consensus quality: 259296 bases at least Q20
Estimated insert size: 279061; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 11520: contig of 11520 bp in length
* 11521 11620: gap of unknown length
* 11621 22497: contig of 10877 bp in length
* 22498 22597: gap of unknown length
* 22598 453608: contig of 431011 bp in length
* 453609 453708: gap of unknown length
* 453709 455036: contig of 1328 bp in length
* 455037 455136: gap of unknown length
* 455137 461536: contig of 6400 bp in length.

Submitted (20-JUN-2003) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
zfsh-help@sanger.ac.uk Clone requests: clonequests@sanger.ac.uk
On Apr 29, 2002 this sequence version replaced gi:20145727.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WORMPEP; Information
http://www.sanger.ac.uk/Projects/C_elegans/wormpep BUSM1-72B14 is
from a Zebrafish PAC library
VECTOR: pCYPAC-6
This clone was isolated from BAC library (Genome Systems, St.
Louis) and provided by A. Donovon and L. Zon (Zon lab,
HMH/Children's Hospital of Boston, USA).
This sequence is the entire insert of clone BUSM1-72B14 This
sequence was finished as follows unless otherwise noted: all

```

regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhifeng Bao and Sean Eddy, submitted), and those beginning 'dir' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_zerrio/fishmask.shtml

Consensus quality: 134,614 bases at least Q40
-----
This sequence was finished as follows unless otherwise noted: all
regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30);
an attempt was made to resolve all sequencing problems, such as
compressions and repeats; all regions were covered by at one
plasmid
subclone or more than one M13 subclone;
and the assembly was confirmed by restriction digest.

-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
EM, EMBL; SW, SWISSPROT; Tr, TREMBL; Wp, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormep/
Zebrafish pUC subclones occasionally display inconsistency over the
length of mononucleotide A/T runs and conserved TA repeats. Where
this is found the longest good quality representation will be
submitted.
Any regions longer than 1kb tagged as misc-feature 'unsure' are
part of a tandem repeat of more than 10kb in length where it has
not been possible to anchor the base differences between repeat
copies. The region has been built up based on the repeat element
to match the total size of repeat indicated by restriction digest,
but repeat copies may not be in the correct order and the usual
finishing criteria may not apply. CH211-303 is from a CHOR1-211 BAC
library

      ----- Project Information
      Center project name: em1
      Center clone name: 031f19

The sequence data in this record represents an 'enhanced'
version of a Phase 2 subdataset. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is generally based on at least 8x average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence

```

contigs have been trimmed away, and each base is associated with a phrap-derived quality score.

----- Summary Statistics -----

Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 169805 bases at least Q40
Consensus quality: 170526 bases at least Q30
Consensus quality: 170987 bases at least Q20
Insert size: 198000; agarose-fp
Insert size: 171284; sum-of-contigs
Quality coverage: 9.07x in Q20 bases; agarose-fp
Quality coverage: 10.48x in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:22856400.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold from the Atlas
assembly ('a' contig-scaffold'). Within each contig-scaffold,
individual sequence configs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
configs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only configs will be indicated in the feature
table.

            -----

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Clone-derived zebrafish pUC subclones occasionally display
inconsistency over the length of mononucleotide A/T runs and
conserved TA repeats. Where this is found the longest good quality
representation will be submitted.
Any regions longer than 1kb tagged as misc-feature 'unsure' are
part of a tandem repeat of more than 10kb in length where it has
not been possible to anchor the base differences between repeat
copies. The region has been built up based on the repeat element
to match the total size of repeat indicated by restriction digest,
but repeat copies may not be in the correct order and the usual
finishing criteria may not apply.
DKEY-52K1 is from a Zebrafish BAC library
VECTOR: pIndigoBAC-5.

COMMENT
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced g1:24819417.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

          -----
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
validation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WormPEP; Information
on the WormPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/WormPEP
Zebrafish pUC subclones occasionally display inconsistency over the
length of mononucleotide A/T runs and conserved TA repeats. Where
this is found the longest good quality representation will be
submitted.

Institute, Hinxton, Cambridge CB10 1SA, England and Department of
Genetics, Washington University, St. Louis, MO 63110, USA. E-mail:
worm@sanger.ac.uk
COMMENT On Jun 13, 1998 this sequence version replaced gi:1666032.
Coding sequences below are predicted from computer analysis, using
predictions from GeneFinder (P. Green, U. Washington), and other
available information.
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a small
overlap between neighbouring subclones.
For a graphical representation of this sequence and its analysis
see: [http://www.wormbase.org/perl/ace/elegans/seq/sequence?](http://www.wormbase.org/perl/ace/elegans/seq/sequence?name=W05B5;class=Sequence)
[name=W05B5;class=Sequence](http://www.wormbase.org/perl/ace/elegans/seq/sequence?name=W05B5;class=Sequence)
This sequence is the entire insert of clone W05B5. The true right
end of clone ZK256 is at 14999 in this sequence. The start of this
sequence (1..105) overlaps with the end of sequence Z82088.
The end of this sequence (29376..29482) overlaps with the start of
sequence AL110478.

COMMENT

University, Genome Sequencing Center, 4444 Forest Park Avenue, St. Louis, MO 63110, USA
Submitted by:

Genome Sequencing Center
Department of Genetics, Washington University
St. Louis, MO 63110, USA, and
Sanger Centre, Hinxton Hall
Cambridge CB10 1RQ, England
email: submissions@watson.wustl.edu and jee@sanger.ac.uk

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

For a graphical representation of this clone sequence and its analysis see:
<http://www.wormbase.org/db/seq/sequence?name=R13f6;class=Sequence>

NEIGHBORING CLONE INFORMATION

The 5' clone is F28F5, 200 bp overlap; the 3' clone is K04C2, 1000 bp overlap.

NOTES:

Coding sequences below are the result of integration and manual review of the following data: computer analysis using the program GeneFinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yujii Kohara (http://www.ddb.jhg.ac.jp/c-elegans/html/CE_INDEX.html) and The C. elegans ORFome cloning project (<http://wormfdb.dcfcl.harvard.edu/>), similarity to other proteins from Blast analysis (<http://blast.wustl.edu/>), sequence conservation with C. briggsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans Genbank submissions, and personal communications with C. elegans researchers. tRNAs are predicted using the program tRNAscan-SF (Lowe, T.M. and Bddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).

Center project name: L2498

Center clone name: 1_U_13

* NOTE: This record contains 73 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one subclone; and the assembly was confirmed by restriction digest,
 except on the rare occasion of the clone being a YAC.

Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help.tmc.edu

----- Project Information -----
Center project name: F0DF
Center clone name: CH240-155M12
----- Summary Statistics -----
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 103355 bases at least Q40
Consensus quality: 108736 bases at least Q30
Consensus quality: 111968 bases at least Q20
Estimated insert size: 123072; sum-of-coverage estimation
Quality coverage: 2x in Q20 bases; sum-of-coverage estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 30 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 5131: contig of 5131 bp in length
* 5132 5231: gap of unknown length

JOURNAL

COMMENT

Submitted (11-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Oct 9, 2002 this sequence version replaced gi:21738214.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold,

individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help@bcm.tmc.edu

Project Information

Center project name: GOLT

Center clone name: CH230-321A19

Assembly program: Phrap; version 0.990329

Consensus quality: 278197 bases at least Q40

Consensus quality: 288079 bases at least Q30

Consensus quality: 293331 bases at least Q20

Estimated insert size: 304877; sum-of-contigs estimation

Quality coverage: 4x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)

NOTE: This sequence may represent more than one clone.

NOTE: This is a 'working draft' sequence. It currently

consists of 19 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

Williams,S.
Direct Submission
Submitted (13-May-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Apr 3, 2000 this sequence version replaced gi:7228194.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Emi, EMBL; Sw, SWISSPROT; Tr, TREMBL; Wp, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr6
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vegas@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest.
RP1-7N10 is from the library RPCL-1 constructed by a YAC.
Pieter de Jong. For further details see

 TITLE Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
 JOURNAL Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
 COMMENT Clone requests: clonerequest@sanger.ac.uk
 On May 27, 1999 this sequence version replaced gi:4678710.
 The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information
 on the WORMPEP database can be found at
 http://www.sanger.ac.uk/projects/C_elegans/wormpep This sequence
 was generated from part of bacterial clone contigs of human
 chromosome X, constructed by the Sanger Centre Chromosome X Mapping
 Group. Further information can be found at
 http://www.sanger.ac.uk/HGP/ChrX
 RP5-1158B12 is from the library RP1-5 constructed by the group of
 Pieter de Jong. For further details see

 This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one subclone; and the assembly was confirmed by restriction digest,
 except on the rare occasion of the clone being a YAC.

COMMENT

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em, EMBL; Sw, SWISSPROT; Tr, TREMBL; Wp, WORMPEP; Information on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Any regions longer than 1kb tagged as misc-feature 'unsure' are part of a tandem repeat of more than 10kb in length where it has not been possible to anchor the base differences between repeat copies. The region has been built up based on the repeat element to match the total size of repeat indicated by restriction digest, but repeat copies may not be in the correct order and the usual finishing criteria may not apply. CH211-237F16 is from a CHORI-211 BAC library
VECTOR: pTARBAC2.1.

Cow Genome Sequencing Consortium.
Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jun 29, 2005 this sequence version replaced gi:66796318.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Consensus quality:

```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30). An attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Source information: The RPCT-43 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at <http://www.chori.org/bacpac/mchimp3.htm>. The clone may be obtained from Pieter J. de Jong and coworkers (<http://www.chori.org/bacpac>).

The CHORI-251 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Bacci Zink, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at <http://www.chori.org/bacpac/chimpanzee251.htm>. The clone may be obtained from Pieter J. de Jong and coworkers (<http://www.chori.org/bacpac>).

The PTB1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.

Clones may be obtained from Asao Fujiyama and co-workers (<http://www.gsc.riken.go.jp>).

The PTF22 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.

Clones may be obtained from Asao Fujiyama and co-workers
(<http://www.gsc.riken.go.jp>).
VECTOR: pKS143

VECTOR: pKS143

Sequence Quality Assessment:

This entry has been annotated with sequence estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Neighboring clones: RP43-117B17 (left) and RP43-093B21 (right) .

Sequence submitted by:
Berkeley Drosophila Genome Project
Lawrence Berkeley National Laboratory, MS 64-121
Berkeley, CA 94720
This sequence was assembled using end sequences from a whole genome
shotgun and from subclones of this BAC and its neighboring clones.
For further information about this sequence, including its location
and relationship to other sequences, please visit our sequence
archive web site (<http://www.fruitfly.org/sequence/>) or send email
to bdg@fruitfly.berkeley.edu.

JOURNAL Submitted (29-JAN-2003) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: clonerequest@sanger.ac.uk
On Jan 30, 2003 this sequence version replaced gi:28144694.
COMMENT
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: <http://www.sanger.ac.uk>
Contact: zfsh-help@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YVC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
beginning 'Dr' were identified by the Recon repeat discovery system
(Zhigong Bao and Sean Eddy, submitted), and those beginning 'dtr'
were identified by Rick Waterman (Stephen Johnson lab, WashU). For
further information see http://www.Projects/D_rerio/fishmark.shtml

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX
XX New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
XX
PS Claim 1; SEQ ID NO 1146; 44pp; English.
XX
XX The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversity, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?docID=20030073623

XX Nucleic acid comprising fragment of chemically modified gene, useful for
PT diagnosis and treatment of diseases associated with abnormal cytosine
PT methylation.
XX
XX
PS Claim 1; SEQ ID NO 892; 32pp + Sequence Listing; German.
XX
XX The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

DR
XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
PT
XX
XX Claim 1; SEQ ID NO 1016; 245pp; English.
PS
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic

CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a bioclip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

 PT Fragments of chemically modified genes associated with tumor suppressor
 PT genes and oncogenes, useful in designing primers and probes for analyzing
 PT diseases associated with cytosine methylation state e.g. cancer.
 XX
 PS Claim 1; SEQ ID NO 13; 27pp; English.
 XX
 CC The invention relates to a nucleic acid comprising a sequence of 18
 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
 CC bisulfite, of genes associated with tumour suppression and oncogenes
 CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
 CC 500 are missing from the sequence listing) sequences (58) and sequences
 CC complementary to (58). The nucleic acid may be a peptide nucleic acid
 CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
 CC probes for detecting the cytosine methylation state and/or single
 CC nucleotide polymorphisms and also to be used in an array for analysing
 CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
 CC probes can also be used in a method for ascertaining genetic and/or
 CC epigenetic parameters for the diagnosis and/or therapy of existing
 CC diseases or the predisposition to specific diseases, by analysing

CC cytosine methylations. The parameters may be compared to another set of
 CC genetic and/or epigenetic parameters, the differences serving as basis
 CC for diagnosis and/or prognosis events which are disadvantageous to
 CC patients. The present sequence is one of the 533 genomic sequences
 CC derived from tumour suppressor genes and oncogenes. Note: The sequence
 CC data for this patent did not form part of the printed specification, but
 CC was obtained in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

 PT Oligonucleotide for diagnosis and therapy of diseases associated with
 PT signal transduction e.g. cancer, comprises chemically modified genomic
 PT sequences of genes associated with signal transduction.
 PS Claim 1; SEQ ID NO 165; 24pp; English.
 CC The present invention relates to chemically modified DNA sequences of
 CC signal transduction associated genes. The DNA sequences are chemically
 CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.
 CC Also disclosed are oligonucleotides and/or PNA oligomers for detecting
 CC the cytosine methylation state (Cpg islands) of these genes, and a method
 CC for the diagnosis and/or therapy of genetic and epigenetic parameters of
 CC genes associated with signal transduction. The genomic DNA can be
 CC obtained from cells or cellular components which contain DNA, e.g. cell
 CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
 CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
 CC brain, heart, prostate, lung, breast or liver, histologic object slides,
 CC and all their possible combinations. The sequences of the invention are
 CC useful for the diagnosis and therapy of diseases associated with signal
 CC transduction e.g. solid tumours and cancer. ABL70293-ABL70294 represent
 CC chemically pretreated genomic DNA sequences of different genes associated

CC with signal transduction, or their complementary sequences. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from the
 CC European Patent Office

 PT Nucleic acid, useful for diagnosis and therapy of diseases associated
 PT with cell signalling e.g. cancer, comprises chemically modified genomic
 PT sequences of genes associated with cell signalling.
 PS Claim 1; SEQ ID NO 183; 24pp + Sequence Listing; English.
 CC The invention relates to a nucleic acid comprising a sequence of at least
 CC 18 bases of a segment of chemically pretreated DNA of genes associated
 CC with cell signalling. The activity of the modified sequences of the
 CC invention may be described as cytostatic. The object of the invention is
 CC to provide the chemically modified DNA of genes associated with cell
 CC signalling, as well as oligonucleotides and/or PNA-oligomers for
 CC detecting cytosine methylations, as well as a method which is
 CC particularly suitable for the diagnosis and/or therapy of genetic and
 CC epigenetic parameters of genes associated with cell signalling. The
 CC chemically modified DNA provided by the invention is useful for diagnosis
 CC and therapy of diseases such as solid tumours and cancer. The sequences
 CC given in records ABL70111-ABL70626 represent chemically pre-treated
 CC genomic DNA's of genes associated with cell signalling. Note: The
 CC sequence data for this patent is not represented in the printed
 CC specification, but is based on sequence information supplied by the
 CC European Patent Office

XX New nucleic acid sequences from chemically modified genes associated with
PT gene regulation, useful for analyzing cytosine methylations for diagnosis
and therapy of diseases e.g. severe combined immunodeficiency disease.

XX Claim 1; SEQ ID NO 183; 26pp; English.

XX The invention relates to 224 nucleic acid sequences comprising at least
CC 18 bases of a chemically pretreated gene associated with gene regulation
CC selected from 43 known genes (or complementary sequences). The chemical
CC pretreatment converts cytosine bases unmethylated at the 5-position to
CC uracil or another base with hybridisation behaviour dissimilar to
CC cytosine, to enable analysis of cytosine methylations. The DNA sequences,
CC oligomers (or sets/arrays) and method are useful in the diagnosis of
CC diseases (or predisposition to diseases) associated with gene regulation
CC and in therapy of such diseases, by enabling analysis of the cytosine
CC methylation patterns of such genes, kits are provided. They are
CC especially useful in diagnosis and therapy of e.g. severe combined
CC immunodeficiency disease, cardiac disorders, haemophilia, solid tumours
CC and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen
CC syndrome, renal disease, preeclampsia, graft versus-host disease. The
CC present sequence is a sequence included in the sequence data for this
CC specification and is associated with the human gene regulation-associated
CC genes. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.

XX Claim 1; SEQ ID NO 5413; 21pp + Sequence Listing; English.

XX The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (AB557737-
CC AB572072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
CC The invention relates to an isolated or purified nucleotide sequences (I)
CC from *Legionella pneumophila* Paris strain. (I), and their related
CC sequences or fragments, are useful as primers and probes for detection
CC and amplification, including differentiation between the Paris and
CC Philadelphia strains of *Legionella pneumophila* and to prepare recombinant
CC (hybrid) polypeptides (II) (II) are also useful for preparation of
CC specific antibodies (Ab), also used for detection/identification of
CC Legionella, and some (I), specifically those involved in synthesis of
CC surface proteins, are targets for identification of inhibitors. (II), or
CC vectors that contain (I), are useful as vaccines and immunogenic
CC compositions, for treatment and prevention of infections by *L.*
CC pneumophila. The present sequence represents a *L. pneumophila* DNA.

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX

PS Claim 1; Page; 1017p; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

 PT sequences of genes associated with signal transduction.
 XX

PS Claim 1; SEQ ID NO 37; 24pp; English.

XX

CC The present invention relates to chemically modified DNA sequences of

CC signal transduction associated genes. The DNA sequences are chemically

CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.

CC Also disclosed are oligonucleotides and/or PNA oligomers for detecting

CC the cytosine methylation state (CpG islands) of these genes, and a method

CC for the diagnosis and/or therapy of genetic and epigenetic parameters of

CC genes associated with signal transduction. The genomic DNA can be

CC obtained from cells or cellular components which contain DNA, e.g. cell

CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,

CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,

CC brain, heart, prostate, lung, breast or liver, histologic object slides,

CC and all their possible combinations. The sequences of the invention are

CC useful for the diagnosis and therapy of diseases associated with signal

CC transduction e.g. solid tumours and cancer. ABR31158-ABR31545 represent

CC chemically pretreated genomic DNA sequences of different genes associated

CC with signal transduction, or their complementary sequences. Note: The

CC sequence data for this patent did not form part of the printed

CC specification, but was obtained in electronic format directly from the

CC European Patent Office

PS Claim 1; SEQ ID NO 411; 24pp + Sequence Listing; English.

XX

CC The invention relates to a nucleic acid comprising a sequence of at least

CC 18 bases of a segment of chemically pretreated DNA of genes associated

CC with cell signalling. The activity of the modified sequences of the

CC invention may be described as cytostatic. The object of the invention is

CC to provide the chemically modified DNA of genes associated with cell

CC signalling, as well as oligonucleotides and/or PNA-oligomers for

CC detecting cytosine methylations, as well as a method which is

CC particularly suitable for the diagnosis and/or therapy of genetic and

CC epigenetic parameters of genes associated with cell signalling. The

CC chemically modified DNA provided by the invention is useful for diagnosis

CC and therapy of diseases such as solid tumours and cancer. The sequences

CC given in records ABL70111-ABL70626 represent chemically pre-treated

CC genomic DNA's of genes associated with cell signalling. Note: The

CC sequence data for this patent is not represented in the printed

CC specification, but is based on sequence information supplied by the

PS Claim 1; SEQ ID NO 63; 26pp; English.

XX

CC The invention relates to 224 nucleic acid sequences comprising at least

CC 18 bases of a chemically pretreated gene associated with gene regulation

CC selected from 43 known genes (or complementary sequences). The chemical

CC pretreatment converts cytosine bases unmethylated at the 5-position to

CC uracil or another base with hybridisation behaviour dissimilar to

CC cytosine, to enable analysis of cytosine methylations. The DNA sequences,

CC oligomers (or sets/arrays) and method are useful in the diagnosis of
CC diseases (or predisposition to diseases) associated with gene regulation
CC and in therapy of such diseases, by enabling analysis of the cytosine
CC methylation patterns of such genes; kits are provided. They are
CC especially useful in diagnosis and therapy of e.g. severe combined
CC immunodeficiency disease, cardiac disorders, haemophilia, solid tumours
CC and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen
CC syndrome, renal disease, preclampsia, graft versus-host disease. The
CC present sequence is a sequence included in the sequence data for this
CC specification and is associated with the human gene regulation-associated
CC genes. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at http://wipo.int/pub/published_pct_sequences

XX
PS Claim 16; SEQ ID NO 694; 182pp; English.
XX
XX The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a human CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PS	Disclosure; SEQ ID NO 494; 297pp; English.
XX	
CC	The invention relates to a method of determining susceptibility of an
CC	individual to joint space narrowing and/or osteohipyte development and/or
CC	joint pain, comprising identifying whether the individual has at least one
CC	polymorphism in a polynucleotide encoding at least one of the protein
CC	listed in the specification. The methods, composition and agent are
CC	useful for modulating the susceptibility of an individual to joint space
CC	narrowing and/or osteohipyte development and/or joint pain that is
CC	associated with a disease, preferably osteoarthritis. The cell line and
CC	the non-human animal are useful for screening for an agent for diagnosing
CC	an individual having susceptibility to joint space narrowing and/or
CC	osteohipyte development and/or joint pain. This sequence corresponds to
CC	the polynucleotide encoding a protein listed in the specification. (Note:
CC	The sequence data for this patent did not form part of the printed
CC	specification but was obtained in electronic format directly from WIPO at
CC	ftp.wipo.int/pub/published_pct_sequences).

PT	Identifying a stress condition to which a plant cell has been exposed and
XX	producing plants with increased tolerance to these abiotic stresses.
PS	Claim 144; SEQ ID NO 5062; 577bp + Sequence Listing; English.
CC	The invention relates to identifying a stress condition to which a plant
CC	cell has been exposed, comprising: (a) contacting nucleic acid
CC	representative of expressed polynucleotides in the plant cell with an
CC	array or probes representative of the plant cell genome; and (b)
CC	detecting a profile of expressed polynucleotides in the plant cell
CC	characteristic of a stress response. The method is useful in the
CC	production of transgenic plants, cells and seeds and in producing plants
CC	with increased tolerance to abiotic stress. The present sequence is that
CC	of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used
CC	in methods of the invention. Note: the sequence data for this patent is
CC	not represented in the printed specification but is based on sequence

XX
PT New nucleic acid molecule having an ovomucoid gene expression controlling
PT region isolated from a chicken and/or a coding sequence encoding a
PT polypeptide other than ovomucoid, useful for producing models for various
PT diseases in humans.
XX
XX Example 6; SEQ ID NO 36; 212pp; English.
PS
XX The present invention relates to an avian, preferably chicken, ovomucoid
CC gene expression control region, which is useful for the expression of
CC nucleotide sequences encoding a protein of interest in a transfected
CC avian cell, such as an oviduct cell. The chicken ovomucoid gene is highly
CC expressed in the tubular glands of the mature hen oviduct and represents
CC a suitable candidate for an efficient promoter for heterologous protein
CC production in transgenic animals. The regulatory region of the ovomucoid
CC locus may extend over a nucleic acid region of about 10kb of DNA 5'
CC upstream of the transcription start site and includes a CRI element.
CC Provided is a nucleic acid molecule comprising an ovomucoid gene
CC expression controlling region isolated from a chicken and/or a coding
CC sequence encoding a polypeptide other than ovomucoid. Specifically, the
CC ovomucoid gene expression control region has a sequence given in SEQ ID
CC NO:26 (see AEA00959), or is the avian nucleic acid contained in SEQ ID
CC NO:36, (see AEA00959). The polypeptide is present in egg white produced
CC by a transgenic avian. The polypeptide is a fusion protein or a CRI4-Fc
CC fusion protein. The methods and compositions of the present invention are
CC useful in understanding the action of a single gene in the context of the
CC whole animal and the phenomena of gene activation, expression and
CC interaction, and for producing models for various diseases in humans and
CC other animals, and in the study of genetics, including genetic mechanisms
CC and functions. The present sequence is a DNA insert from a BAC clone
CC encompassing the ovoinhibitor and ovomucoid genes, designated OMC24.

CC gene expression control region, which is useful for the expression of
CC nucleotide sequences encoding a protein of interest in a transfected
CC avian cell, such as an oviduct cell. The chicken ovomucoid gene is highly
CC expressed in the tubular glands of the mature hen oviduct and represents
CC a suitable candidate for an efficient promoter for heterologous protein
CC production in transgenic animals. The regulatory region of the ovomucoid
CC locus may extend over a nucleic acid region of about 10kb of DNA 5'
CC upstream of the transcription start site and includes a CRI element.
CC Provided is a nucleic acid molecule comprising an ovomucoid gene
CC expression controlling region isolated from a chicken and/or a coding
CC sequence encoding a polypeptide other than ovomucoid. Specifically, the
CC ovomucoid gene expression control region has a sequence given in SEQ ID
CC NO:26 (see AEA00969) or is the avian nucleic acid contained in SEQ ID
CC NO:36, (see AEA00969). The polypeptide is present in egg white produced
CC by a transgenic avian. The polypeptide is a fusion protein or a CTLA4-Fc
CC fusion protein. The methods and compositions of the present invention are
CC useful in understanding the action of a single gene in the context of the
CC whole animal and the phenomena of gene activation, expression and
CC interaction, and for producing models for various diseases in humans and
CC other animals, and in the study of genetics, including genetic mechanisms
CC and functions. The present sequence is DNA of an ovomucoid gene
CC expression controlling region-BAC expression vector with a CTLA4-Fc
CC fusion coding sequence and an atb site. This was constructed using
CC nucleotide sequences for an immunoglobulin constant region (IgG1Fc).

XX New avian ovomucoid gene expression controlling region, useful for
PT expressing a wide range of desired proteins, e.g. proteins used as human
PT and animal pharmaceuticals, diagnostics, and livestock feed additives.
XX
XX Example 12; SEQ ID NO 44; 158bp; English.
PS
XX
XX The present invention relates to a nucleic acid molecule comprising an
CC ovomucoid (OM) gene expression controlling region isolated from a chicken
CC and/or operably linked to a coding sequence encoding an amino acid
CC sequence other than ovomucoid. The nucleic acid molecule is useful for
CC expressing, in large and at low cost, a wide range of desired proteins
CC including those used as human and animal pharmaceuticals, diagnostics and
CC livestock feed additives or other proteins, e.g. growth hormones,
CC cytokines, structural proteins, or enzymes. The invention is also useful
CC for producing transgenic animal. The present sequence is a fusion DNA
CC comprising chicken ovomucoid gene controlling region, OMC24, internal
CC ribosome entry site (IRES) DNA, actB site, extra cellular domain of
CC cytotoxic T lymphocyte antigen 4 (CTLA4) receptor protein DNA and human
CC IgG1 constant region (Fc).

PS
XX
XX AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
CC cancer-associated nucleic acid molecules (N) and proteins (P), where the
CC proteins are collectively known as colon cancer antigens. The colon
CC cancer antigens have cytostatic activity and can be used in gene therapy
CC and vaccine production. N and P may be used in the prevention, diagnosis
CC and treatment of diseases associated with inappropriate P expression. For
CC example, N and P may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of P by expressing inactive proteins or to
CC supplement the patient's own production of P. Additionally, N may be used
CC to produce the colon cancer-associated Ps, by inserting the nucleic acids
CC into a host cell and culturing the cell to express the proteins. N and P
CC can be used in the prevention, diagnosis and treatment of colorectal
CC carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent
CC sequences used in the exemplification of the present invention. N.B.

 PT for cattle gene expression and genetically improved cattle.
 XX
 PS Claim 2; SEQ ID NO 4308; 38pp; English.
 XX
 CC The invention relates to a purified nucleic acid molecule associated with
 CC lactation or muscle and fat deposition (designated LMPD), derived from
 CC cattle, and the LMPD nucleic acid can specifically hybridize to a second
 CC nucleic acid molecule comprising any of 5912 nucleotide sequences,
 CC appearing as ABX50072-ABX55983, or complements of them. Also included are
 CC (1) a transformed cell having a nucleic acid comprising an LMPD nucleic
 CC acid linked to a promoter and a 3' non translated sequence that
 CC functions in the cell to cause termination of transcription and addition
 CC of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and
 CC (2) determining a level or pattern of a molecule in a bovine cell or
 CC tissue comprising: (a) incubating a marker nucleic acid (comprising any
 CC of the 5912 nucleic acid sequences or its complement or fragment) with a
 CC complementary nucleic acid molecule obtained from the bovine cell or
 CC tissue, where hybridization between the marker nucleic acid and the
 CC complementary nucleic acid permits the detection of the molecule; and (b)
 CC detecting the level or pattern of the complementary nucleic acid, where
 CC the detection of the complementary nucleic acid is predictive of the
 CC level or pattern of the molecule. The LMPD nucleic acid is used for
 CC determining a level or pattern of a molecule in a bovine cell or tissue.
 CC It is useful for genome mapping, gene identification and analysis, cattle
 CC breeding, preparation of constructs for use in cattle gene expression, or
 CC for genetically improving cattle. The present sequence is one of the 5912
 CC bovine LMPD EST (expressed sequence tag) nucleic acids. Note: The present
 CC sequence was not shown in the specification but was obtained in
 CC electronic format from the USPTO web site:

 PS Disclosure, Page; 75pp; German.
 XX
 CC The invention relates to a novel method for in vitro detection of
 CC systemic inflammatory response syndrome (SIRS). The method comprises
 CC detecting abnormal expression of disease-related genes, or their
 CC associated peptides. The method of the invention demonstrates
 CC antibacterial, immunosuppressive and antiinflammatory applications and
 CC may be used for early differential diagnosis, monitoring progression,
 CC assessing risk, assessing the likely response to treatment and for post
 CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and
 CC sepsis-like conditions. The recombinant or synthetic nucleic acid
 CC sequences of the invention, or derived proteins or peptides, may be
 CC useful as calibrants in assays for the specified diseases, for evaluating
 CC activity or toxicity in screening for active agents and/or for
 CC preparation of agents for treatment or prevention of the specified
 CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic
 CC marker DNA fragment of the invention. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at fcp.wipo.int/pub/published
 CC pct sequences. Furthermore, a number of arbitrary SEQ ID NO.s are
 CC disclosed within the specification, however, these have not been taken
 CC into account during indexing due to inconsistencies in application and
 CC format

 PT Determining the degree of cytosine methylation in genomic DNA, useful for
 PT diagnosis and prognosis, comprises selective hybridization of amplicons
 PT from chemically treated DNA.
 XX
 PS Claim 12; 56bp + Sequence listing; 56bp; German.

```

CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one member,
CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC degree of hybridisation to both classes is determined from the label on
CC the amplicon. From the ratio of labels hybridised to the two classes of
CC oligomers, the degree of methylation is calculated. The method is used:
CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC and of a wide range of diseases, e.g. cancer, disorders of the central
CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC particularly by detecting mutations or single nucleotide polymorphisms
CC (SNP's); and (ii) for differentiation of cell or tissue types and for
CC investigating cell differentiation. The method allows the methylation
CC status of many C residues to be determined simultaneously. ABQ3410-
CC ABQ54121 represent genomic DNA sequences used to illustrate the method
CC for determining the degree of cytosine methylation described in the
CC disclosure of the invention

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Clones are derived from the porcine BAC library RPCI-44
(http://www.bacpac.chori.org/porcine42.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@chori.org).

Clones may be purchased from BACPAC Resources
(http://BACPACresources.chori.org). This work was undertaken as part
of the International Swine Genome Sequencing Consortium by
University of Illinois at Urbana Champaign, USA with funds provided
by grant No. AG2002-34480-11828 from USDA-CSREBS and
AG2001-35205-09965 from USDA/NRI (Livestock Genome Sequencing
Initiative)

BX158115 Danio rerio genomic clone DKEX-147118, genomic survey sequence.

ACCESSION
BX158115
KEYWORDS
GSS.

SOURCE
Danio rerio (zebrafish)
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Actinopterygii; Neopterygii; Teleostei; Ostariophysi;

REFERENCE
1 (bases 1 to 566)
Cyriniiformes; Cyprinidae; Danio.

AUTHORS
Humphray, S.J., Huckle, E. and Durham, J.L.
TITLE
Direct Submission

JOURNAL
Submitted (27-JAN-2003) The Sanger Institute, Wellcome Trust Genome
Campus, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humphray@sanger.ac.uk Unpublished

COMMENT
This sequence was generated from the 7' end of BAC 147118. 147118
is part of the Daniokey BAC library created by R. Plasterk and N.V.
Keygene. Further details:
http://www.sanger.ac.uk/projects/D_rerio/

Clone Distribution: I.M.A.G.E. Consortium/LML:
http://image.llnl.gov
Naming Conventions: EST name is generated by the concatenation of
the UGI Clone id and the direction of sequencing. The suffix '.rev'
indicates a reverse sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.

 Determination of this BAC-end sequence was carried out as part of a
 collaboration with the Berkeley Drosophila Genome Project (BDGP).
 The BDGP is constructing a physical map of the Drosophila
 melanogaster genome using these BACs. For further information
 please see <http://www.fruitfly.org> The BDGP Drosophila
 melanogaster BAC library was prepared by Kazutoyo Osoegawa and
 Aaron Mawmser in Pieter de Jong's laboratory in the Department of
 Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
 NY. The library is named Rpt-98 and was constructed by partial
 EcoRI digestion of Drosophila DNA provided by the BDGP from the
 isogenic strain y2; cn bw sp, the same strain used for the BDGP's

P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Primer A: No sequence submitted
 Primer B: No sequence submitted
 STS size: 628
 Protocol:
 23,021,928 chimpanzee whole genome shotgun reads were aligned to
 the Human genome NCBI
 Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,
 including Clint (Pan
 troglodytes verus), 3 other Pan troglodytes versus chimps
 (Donald, Karlien, Yvonne), 3 Pan
 troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps

FEATURES

source

of unknown origin
 (Gen,Unknown Chimp). Common names: Pan troglodytes versus is the
 western chimp and Pan
 troglodytes troglodytes is the central chimp. To be included in
 chimpanzee SNP discovery, a
 read must be at least 500bp in length, at least 50% of its base
 calls must have Phred
 score >= 20, at least 30% of its base calls must satisfy
 SNOS(30,25) (single strand NOS, the
 base in question has Phred score >= 30, the surrounding 10 bases in
 the read have Phred
 score >= 25), and the read must have at least 200 bp SNOS(30,25)
 bases. Reads not uniquely
 placed in the genome and read pairs whose two ends were not
 consistently placed were
 discarded. After above filtering, NOS(30,25) standard was applied
 to all pairs of
 overlapping reads to call NOS bases and SNPs. Alignments (between
 two reads) with less
 than 100 NOS bases or with SNP rate > 0.01 were discarded. To
 exclude alignment between two
 copies of a single read, comparisons between two reads that share
 95% of their genome
 alignments (>=95% bases of read A and >=95% bases of read B were
 placed at the same locus
 of human genome) were discarded.

STS size: 724

Protocol:

23,021,928 chimpanzee whole genome shotgun reads were aligned to the Human genome NCBI Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors, including Clint (Pan troglodytes verus), 3 other Pan troglodytes verus chimps (Donald, Karlien, Yvonne), 3 Pan troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps of unknown origin (Gon, Unknown Chimp). Common names: Pan troglodytes verus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanzee SNP discovery, a read must be at least 500bp in length, at least 50% of its base calls must have Phred score >= 20, at least 30% of its base calls must satisfy SNQs(30,25) (single strand NQs, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNQs(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQs(30,25) standard was applied to all pairs of overlapping reads to call NQs bases and SNPs. Alignments (between two reads) with less than 100 NQs bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>95% bases of read A and >95% bases of read B were placed at the same locus of human genome) were discarded.

COMMENT

An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al. (1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145). This clone is in a modified pBluescript vector. Please visit our web site (http://range.gsc.riken.jp/) for further details.

RIKEN Genomic Sciences Center (GSC) members carried out the collection and clustering of RAPL cDNAs (RAPL cDNA: 'RIKEN Arabidopsis Full-Length cDNA'): Seki, M., Narusaka, M., Ishida, J., Satou, M., Kamiya, A., Sakurai, T., Carninci, P., Kawai, J., Hayashizaki, Y. and Shinozaki, K.

The Salk, Stanford, PGEC (SSP) Consortium members carried out the sequencing and annotation of the RAPL cDNAs: Nguyen, M., Southwick, A., Karlin-Neumann, G., Lam, B., Miranda, M., Palm, C.J., Bower, L., Jones, T., Banh, J., Chen, H., Cheuk, R., Chung, M.K., Kim, C., Lin, J., Liu, S.X., Pham, P.K., Sakano, H., Shim, P., Yamada, K., Ecker, J., Theologis, A. and Davis, R.W.

Nguyen, M. (SSP/Stanford) and Seki, M. (RIKEN GSC) contributed equally to this work. Shinozaki, K. (RIKEN GSC) and Davis, R.W. (SSP/Stanford) contributed equally to this work as PIs.

Direct Submission
Submitted (02-APR-1999) Yasukazu Nakamura, Kazusa DNA Research Institute, Department of Plant Gene Research, 153-3, Yata, Kisarazu, Chiba 292-0812, Japan (E-mail: ynakamu@kazusa.or.jp, Tel:81-438-52-3935, Fax:81-438-52-3934)
Tel:81-438-52-3935, Fax:81-438-52-3934)
Addresses for correspondence: kaos@kazusa.or.jp
For the latest information on annotation of this clone, please see <http://www.kazusa.or.jp/kaos/cgi-bin/agd/graph.cgi?c=MSD21>
Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiers. Genes that have no significant protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Graal (Informatics Group, Oak Ridge National Laboratory, <http://combio.ornl.gov/Graal-1.3/>), GENSCAN (Chris Burge, MIT, <http://CCP-081.mit.edu/GENSCAN.html>), NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, <http://www.cbs.dtu.dk/services/NetGene2/>) and SplicePredictor (Volker Brendel, Stanford University, <http://gremli.ni.zozi.laestate.edu/cgi-bin/sp.cgi>).
Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, Washington University School of Medicine, St. Louis, <http://genome.wustl.edu/eddy/tRNAscan-SE/>).
This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5' clone is M123 and the 3' clone is MEK6.

----- Summary Statistics
Center project name: M_BB0378106

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The Rpci-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone. This clone is overlapped by AC122502.

 COMMENT
 Center: Washington University Genome Sequencing Center
 Center code: MUGSC
 Web site: http://genome.wustl.edu
 Contact: submissions@wustl.wustl.edu
 Center project name: C_P1166E01

NOTICE: This sequence may not represent the entire insert of this
 clone. It may be shorter because we only sequence overlapping
 clone sections once, or longer because we provide a small overlap
 between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by sequence
 from more than one subclone; and the assembly was confirmed by
 restriction digest.

MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. Wes Warren,
 Department of Genetics, Washington University, St. Louis MO. For
 additional information about the map position of this sequence, see
 http://genome.wustl.edu

SOURCE INFORMATION:
 The RP43 BAC Library has been constructed by Chung-Li Shu. DNA
 was isolated from white blood cells obtained from a male chimpanzee
 (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The
 clone and detailed information can be obtained from ResGen
 (http://www.resgen.com) or Pieter de Jong and co-workers at
 http://www.bacpac.chori.org.

NEIGHBORING SEQUENCE INFORMATION:
 This sequence is the entire insert of the clone.

CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.

ANNOTATION OF FEATURES:
    STS are identified using EPCR (Genome Res. 7:541-550) searches
    of a local database that includes entries from dbSTS, GDB, and
    local mapping efforts.
    Repeats are identified using RepeatMasker (A. Smit and P. Green,
    unpublished.) for Human and Mouse sequences.
    Genes and Region of sequence similarity are identified by BLAST
    (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
    EST and cDNA sequences. Genes demonstrate, at least two exons
    flanked by consensus splice sites that maintained sequence
    continuity across the splice junctions. Sequences that are not
    identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:
http://gc.bcm.tmc.edu:8088/quality\_info/genbank\_annotation.html.

Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: HBSP
Center clone name: RP11-1P14
----- Summary Statistics
Sequencing vector: M13;
Chemistry: Dye-Primer Bodipy: 44% of reads
Chemistry: Dye-terminator Big Dye: 56% of reads
Assembly program: Phrap: version 0.990139
Consensus quality: 152384 bases at least Q40
Consensus quality: 154433 bases at least Q30
Consensus quality: 155875 bases at least Q20
Estimated insert.size: 158401; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
* as soon as it is available and the accession number will
* be preserved.

* 1 2079: contig of 2079 bp in length

	----- Genome Center								
	Center: Washington University Genome Sequencing Center								
	Center code: WUGSC								
	Web site: http://genome.wustl.edu/gsc								
	Contact: saplens@watson.wustl.edu								
	----- Summary Statistics								
	Center project name: H_NH0240A16								

	NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.								
	This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.								
	MAPPING INFORMATION:								
	Mapping information for this clone was provided by Dr. John D. McChesron, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc								

SOURCE INFORMATION:
The RPl1-11 human BAC library was made from the blood of one male donor, as described by Oosagawa, K., Moon, P. Y., Zhao, B., Frengen, E., Tateno, M., Carlsene, J. J., and de Jong, P. J. (1998). An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.reagen.com>) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (<http://bacpac.med.buffalo.edu>)

VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RPl1-240A16; actual end is at base position 196721 of RPl1-240A16.

The sequence H.NH0240A16 from base position 157677 to 158503 contains a tandem repeat. The assembly is consistent with digest information about the sequence fidelity cannot be guaranteed.

 Direct Submision
 Submitted (01-JUL-2005) Human Genome Sequencing Center, Department

On Jun 26 2005 this sequence version replaced g1:58037818. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 ----- Summary Statistics
 Assembly program: Arriba 1.0;
 Consensus quality: 151257 bases at least Q40
 Consensus quality: 152570 bases at least Q30
 Consensus quality: 153714 bases at least Q20
 Estimated insert size: 156424; sum-of-confids estimation
 Quality coverage: 8x in Q20 bases; sum-of-confids estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hpsc.bcm.tmc.edu/docs/genbank_draft_data.html)
* NOTE: This is a 'working draft' sequence. It currently
* consists of 19 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Cow Genome Sequencing Consortium.

Direct Submission

Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Jun 28, 2005 this sequence version replaced gi:58332918.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated

by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

coverage: 12.57x in Q20 bases; agarose-fp
*****
* NOTE: This is a 'working draft' sequence. It currently
* consists of 7 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
1 26809: contig of 26809 bp in length
* 26810 26909: gap of 100 bp
* 68268 68268: contig of 4359 bp in length
* 68369 68369: gap of 100 bp
* 68369 167000: contig of 98632 bp in length
* 167001 167100: gap of 100 bp
* 167101 173500: contig of 4250 bp in length
* 173501 174500: gap of 100 bp
* 174501 179079: contig of 7629 bp in length

NOTE: This is a 'working draft' sequence. It currently
consists of 11 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Jun 29, 2005 this sequence version replaced gi:6396587.
The sequence in this assembly is a combination of BAC-based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/atl/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence

contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Summary Statistics

Assembly program: Aclae 3.0;

Consensus quality: 22495 bases at least Q40

Consensus quality: 22750 bases at least Q30

Estimated insert size: 230049 bases at least Q20

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draift_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 30 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

COMMENT
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 553
Protocol:

WGS-discovery (WGS):
Paired-end low-coverage whole genome shotgun reads were generated from 9 breeds
(German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each)
and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs:
A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this

sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately 78%.

Internal-WGA-discovery (I-WGA):
A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of >= 30 on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately 78%.

```

with alleles from the
boxer and the poodle. The validation rate for these SNPs was
estimated at approximately TBD%.
Internal-WGA-discovery (I-WGA):
A third set of SNPs were discovered by comparing reads in the WGA
assembly. SNPs were
defined as mismatch positions that had a base quality of >= 30 on
both reads in a region
that aligned without gaps, and with at most one additional mismatch
in the ten flanking
bases. For each allele, at least one additional read had to confirm
it. 731476 SNPs were
annotated with alleles between the two boxer alleles. The
validation rate for these SNPs
was estimated at approximately TBD%.

Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 608
Protocol:
WGS-discovery (WGS):
Paired-end low-coverage whole genome shotgun reads were generated
from 9 breeds
(German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
Retriever, English
Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese
Water Dog -100,000 each)
and five other canids (Chinese, Alaskan, Indian and Spanish Gray
Wolf as well as the
Californian Coyote).
The WGS reads were placed uniquely on the Canfam1.0 boxer assembly
and SNP detection was
carried out by SSAHA-SNP. 863872 reads were annotated as STSs and
485941 SNPs were
annotated with alleles from the boxer and the breed or canid from
which the particular
read came. The validation rate for these SNPs was estimated at
approximately 98%.
WGA-discovery (WGA) of Boxer/Poodle SNPs:
A second set of SNPs was generated using a similar methodology
except that the contigs
from the 1.5x poodle assembly (Kirkness 2003) were used instead of
WGS reads. Since this
sequence lacked base quality scores, arbitrary quality scores of
phred 40 were assigned
before the poodle sequence was placed uniquely on the Canfam1.0
boxer assembly and SNP
detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated

AY434015

LOCUS Schistosoma mansonii clone WO18 transcription factor (HSF) mRNA,

DEFINITION partial cds, alternatively spliced.

ACCESSION AY434015.1 GI:40388414

VERSION

KEYWORDS

SOURCE

ORGANISM

Schistosoma mansonii

Eukaryota; Metazoa; Platyhelminthes; Trematoda; Digenea;

Strigoididae; Schistosomatidae; Schistosomatidae; Schistosoma.

1 (bases 1 to 2254)

Ram,D., Ziv,E., Lantner,F., Lardans,V. and Schechter,I.

Stage-specific alternative splicing of the heat-shock transcription

factor during the life-cycle of Schistosoma mansonii

2 (bases 1 to 2254)

Ram,D., Ziv,E., Lantner,F., Lardans,V. and Schechter,I.

Direct Submission

Submitted (23-SEP-2003) Immunology, The Weizmann Institute of

Science, Rehovot 76100, Israel

XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (AB16176-AB130511), expressed DNA
CC sequences (AB101840-AB16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
XX Claim 1; SEQ ID NO 514; 27pp; English.
XX
XX The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumor suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analyzing
CC diseases associated with CpG dinucleotides e.g. cancers and tumors. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumor suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
 PT comprises a nucleotide sequence.

PS Claim 1; SEQ ID NO 1990; Opp; English.

XX The present invention relates to novel DNA and protein sequences which
 CC are associated with carcinomas. The sequences are useful for: (i) for
 CC screening drug candidates; (ii) for screening of bioactive agent capable
 CC of binding to Carcinoma Associated protein (CAP); (iii) for screening of
 CC a bioactive agent capable of modulating the activity of CAP; (iv) for
 CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
 CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
 CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
 CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
 CC determining Carcinoma Associated (CA) gene copy number. In addition, the
 CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
 CC carcinoma including lymphoma. The present sequence is one such CA coding
 CC sequence. Note: This patent is an equivalent to basic patent
 CC US2002182586A1, for which no sequence data was published

PT New nucleic acids or oligomers, useful for diagnosing or treating
PT diseases associated with DNA transcription, e.g. immunological disorders,
PT Werner syndrome, psoriasis, myocardial infarction, solid tumors or
PT cancer.

PS Claim 1; SEQ ID NO 188; 32pp; English.

CC The invention relates to a nucleic acid, which comprises a segment of the
CC chemically pretreated DNA of genes associated with DNA transcription from
CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC to the chemically pretreated DNA of genes associated with DNA
CC transcription. The set of oligomer probes are useful for detecting the

CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC diagnosing or treating diseases associated with DNA transcription
CC (particularly with the methylation status), e.g. adenoviral deaminase
CC deficiency, viral infection, retroviral infection, Searcy syndrome,
CC haematological disorders, immunological disorders, Werner syndrome,
CC tuberculosis, developmental disorders, porriasis, Kieger's syndrome,
CC neurological disorders, neurodegenerative disorders, Waardenburg
CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC infarction, hypertension, angiodysplasia, erythropoiesis, congenital heart
CC disease, HSR syndrome, arthritis, polyglutamine disorders, solid tumours
CC or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
CC associated genomic DNA molecules of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification but
CC was obtained in electronic format directly from the European Patent
CC Office

PT New rice promoter, useful for manipulating crop plants to alter or
PT improve phenotypic characteristics, e.g. produce large quantities of oil
PT or proteins, resistance to insecticides, virus or fungi, stress tolerance
PT or high nutritional value.

XX
PS Claim 1; SEQ ID NO 2650; 230bp; English.
XX
XX The invention relates to plant nucleotide sequences that direct seed-,
CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential
CC or constitutive transcription of an operatively linked nucleic acid
CC segment. The invention also relates to a method for augmenting a plant
CC genome and a method of identifying a gene, where its expression is
CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive
CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,
CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,
CC sorghum, rice or wheat. The polynucleotides and the polypeptides they
CC encode are useful for manipulating crop plants to alter or improve
CC phenotypic characteristics, to produce large quantities of oil or
CC proteins, to incur resistance to insecticides, viruses or fungi, and to
CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants
CC have a high nutritional value with reduced apical dominance or dwarfism,
CC early flowering or altered metabolic pathways. This sequence represents a
CC plant nucleic acid of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification but was obtained in
CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

New nucleic acid or oligomers, useful for diagnosing or treating
diseases associated with DNA transcription, e.g. immunological disorders,
PT Werner syndrome, psoriasis, myocardial infarction, solid tumours or
PT cancer.

Claim 1; SEQ ID NO 129; 32pp; English.

The invention relates to a nucleic acid, which comprises a segment of the
CC chemically pretreated DNA of genes associated with DNA transcription from
CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC to the chemically pretreated DNA of genes associated with DNA
CC transcription. The set of oligomer probes are useful for detecting the
CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC diagnosing or treating diseases associated with DNA transcription
CC (particularly with the methylation status), e.g. adenosine deaminase
CC deficiency, viral infection, retroviral infection, Sezary syndrome,
CC haematological disorders, immunological disorders, Werner syndrome,
CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
CC neurodegenerative disorders, Mardenburg syndrome, Niemann-Pick disease,
CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
CC or cancer. Sequences ABL33502-ABL33502 represent DNA transcription
CC associated genomic DNA molecules of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification but
CC was obtained in electronic format directly from the European Patent
CC Office

XX	Claim 1; SEQ ID NO 406; 24pp + Sequence Listing; English.
CC	The invention relates to a nucleic acid comprising a sequence of at least
CC	18 bases of a segment of chemically pretreated DNA of genes associated
CC	with cell signalling. The activity of the modified sequences of the
CC	invention may be described as cyostatic. The object of the invention is
CC	to provide the chemically modified DNA of genes associated with cell
CC	signalling, as well as oligonucleotides and/or PNA-oligomers for
CC	detecting cytosine methylations, as well as a method which is
CC	particularly suitable for the diagnosis and/or therapy of genetic and
CC	epigenetic parameters of genes associated with cell signalling. The
CC	chemically modified DNA provided by the invention is useful for diagnosis
CC	and therapy of diseases such as solid tumours and cancer. The sequences
CC	given in records AB170111-AB170626 represent chemically pre-treated
CC	genomic DNA's of genes associated with cell signalling. Note: The
CC	sequence data for this patent is not represented in the printed
CC	specification, but is based on sequence information supplied by the

PT and therapy of diseases e.g. severe combined immunodeficiency disease.
XX
PS Claim 1; SEQ ID NO 48; 26pp; English.
XX
CC The invention relates to 224 nucleic acid sequences comprising at least
CC 18 bases of a chemically pretreated gene associated with gene regulation
CC selected from 43 known genes (or complementary sequences). The chemical
CC pretreatment converts cytosine bases unmethylated at the 5-position to
CC uracil or another base with hybridisation behaviour dissimilar to
CC cytosine, to enable analysis of cytosine methylations. The DNA sequences,
CC oligomers (or sets/arrays) and method are useful in the diagnosis of
CC diseases (or predisposition to diseases) associated with gene regulation
CC and in therapy of such diseases, by enabling analysis of the cytosine
CC methylation patterns of such genes, kits are provided. They are
CC especially useful in diagnosis and therapy of e.g. severe combined
CC immunodeficiency disease, cardiac disorders, hemophilia, solid tumours
CC and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen
CC syndrome, renal disease, precociousness, graft versus-host disease. The
CC present sequence is a sequence included in the sequence data for this
CC specification and is associated with the human gene regulation-associated
CC genes. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX Claim 1; SEQ ID NO 602; 577bp; English.
CC
CC The invention relates to isolated nucleic acid molecules encoding novel
CC human secreted extracellular matrix proteins (SPs). The polynucleotides
CC and proteins are used to prevent, treat a medical condition in e.g.
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For
CC example, disorders associated with decreased expression of SPs. The SP
CC polynucleotide or a vector expressing them may be administered to treat
CC diseases by gene therapy. Antisense molecules may be administered to down
CC regulate expression of SPs by binding with the cells own genes and
CC preventing their expression. The polynucleotides may also be used as DNA
CC probes in diagnostic assays. The SPs may also be used as antigens to
CC produce antibodies and to identify modulators (agonists and antagonists)
CC of the SPs. The anti-(SP) antibodies and antagonists may also be used to
CC down regulate expression and activity of SP and as diagnostic agents for
CC detecting the presence of SPs in samples. The disorders include for
CC example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency
CC virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis),
CC cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of
CC the breast or liver, Sezary syndrome and Gaucher's disease), neurological
CC diseases (e.g. Alzheimer's disease, Parkinson's disease) cardio-
CC /cerebrovascular disorders (e.g. cardiac arrest, tachycardia and angina),
CC infections caused by bacteria, viruses and fungi and ocular disorders
CC (e.g. corneal infections). Other uses include wound healing, maintenance
CC of organs before transplantation, support of cell culture of primary
CC tissues, modulation of for example differentiation of embryonic stem

XX
XX New nucleic acid encoding human proteins, useful for diagnosis, treatment
XX and prevention of e.g. osteoporosis, also related polypeptides and
XX antibodies.
XX
XX Disclosure; SEQ ID NO 602; 235pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AB066521-AB066785) and proteins
XX (ABP47846-ABP48110) useful for preventing, treating or ameliorating
XX medical conditions e.g. by protein or gene therapy. The genes are
XX isolated from a range of human tissues disclosed in the specification.

CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemia; (d) wound healing
CC; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. The present sequence is that of a polynucleotide of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html?ocid=99999764870

CC	XX		
CC	PI	Rosen CA, Ruben SM, Barash SC;	
CC	XX		
CC	XX	WPI; 2003-743765/70.	
CC	PT	New isolated nucleic acids and polypeptides, useful for diagnosing,	
CC	PT	treating, and/or preventing disorders, such as cancer, infections,	
CC	PT	cardiovascular and inflammatory diseases.	
CC	XX		
CC	PS	Disclosure; SEQ ID NO 602; 235bp; English.	
CC	XX		
CC	CC	The invention relates to an isolated nucleic acid molecule (cDNA)	
CC	CC	encoding a human extracellular matrix protein, representing one of 161	
CC	CC	novel genes. Also included are recombinant vectors, host cells	
CC	CC	(expressing the protein), the extracellular matrix proteins (including	
CC	CC	their fragments, epitopes and homologues), an isolated antibody that	
CC	CC	binds specifically to the protein, diagnosing a pathological condition or	
CC	CC	susceptibility to a pathological condition (comprising determining the	
CC	CC	presence or absence of a mutation in the nucleic acid and diagnosing a	
CC	CC	condition based on the presence or absence of the mutation), diagnosing a	
CC	CC	pathological condition or susceptibility to a pathological condition	
CC	CC	(comprising determining the presence or amount of expression of the	
CC	CC	protein in a biological sample and diagnosing a condition based on the	
CC	CC	presence or amount of expression of the protein), preventing, treating or	
CC	CC	ameliorating a medical condition by administering the nucleic acid or	
CC	CC	protein to a mammalian subject, identifying a binding partner to the	

CC protein, the gene corresponding to the cDNA sequence, and identifying an
CC activity in a biological assay (comprising expressing the nucleic acid in
CC a cell, isolating the supernatant, detecting an activity in a biological
CC assay and identifying the protein in the supernatant having the
CC activity). The nucleic acids and proteins display the following
CC activities: Cytostatic, antibacterial, Virucide, Neuroprotective,
CC Gynaecological, Gastrointestinal-Gen, Cardiant, Cardiovascular-Gen,
CC Nephrologic, Antiinflammatory, Muscular-Gen, Respiratory-Gen,
CC Immunosuppressive, Cerebroprotective, Vasotrophic, Nootropic,

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX
XX PI Rosen CA, Barash SC, Ruben SM;
XX
XX WPI, 2001-465572/50.
XX
XX Nucleic acid molecules encoding human secreted extracellular matrix
XX PT proteins, used in preventing, treating or ameliorating a disorder, e.g.
XX PT Alzheimer's and Parkinson's diseases and cancers.
XX
XX
XX Claim 1; SEQ ID NO 601; 577bp; English.
XX
XX The invention relates to isolated nucleic acid molecules encoding novel
XX CC human secreted extracellular matrix proteins (SPs). The polynucleotides
XX CC and proteins are used to prevent, treat a medical condition in e.g.
XX CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For
XX CC example, disorders associated with decreased expression of SPs. The SP
XX CC polynucleotide or a vector expressing them may be administered to treat
XX CC diseases by gene therapy. Antisense molecules may be administered to down
XX CC regulate expression of SPs by binding with the cells own genes and
XX CC preventing their expression. The polynucleotides may also be used as DNA
XX CC probes in diagnostic assays. The SPs may also be used as antigens to
XX CC produce antibodies and to identify modulators (agonists and antagonists)
XX CC of the SPs. The anti-(SP) antibodies and antagonists may also be used to
XX CC down regulate expression and activity of SP and as diagnostic agents for
XX CC detecting the presence of SPs in samples. The disorders include for
XX CC example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency
XX CC virus), hepatitis, anemia, rheumatoid arthritis and multiple sclerosis),
XX CC cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of
XX CC the breast or liver, Sezary syndrome and Gaucher's disease), neurological
XX CC diseases (e.g. Alzheimer's disease, Parkinson's disease) cardio-
XX CC /cerebrovascular disorders (e.g. cardiac arrest, tachycardia and angina),
XX CC infections caused by bacteria, viruses and fungi and ocular disorders
XX CC (e.g. corneal infections). Other uses include wound healing, maintenance

CC of organs before transplantation, support of cell culture of primary
CC tissues, modulation of for example differentiation of embryonic stem

XX
XX New nucleic acid encoding human proteins, useful for diagnosis, treatment
PT and prevention of e.g. osteoporosis, also related polypeptides and
PT antibodies.
XX
XX Disclosure; SEQ ID NO 601; 235bp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AB065521-AB066785) and proteins
CC (ABP47846-ABP48110) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune chryoiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemia; (d) wound healing
CC / (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. The present sequence is that of a polynucleotide of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html?docID=99909764870

XX MPI; 2003-743765/70.
XX
XX
XX PT New isolated nucleic acids and polypeptides, useful for diagnosing,
XX PT treating, and/or preventing disorders, such as cancer, infections,
XX PT cardiovascular and inflammatory diseases.
XX
XX PS Disclosure; SEQ ID NO 601; 235pp; English.
XX
XX CC The invention relates to an isolated nucleic acid molecule (cDNA)
XX CC encoding a human extracellular matrix protein, representing one of 161
XX CC novel genes. Also included are recombinant vectors, host cells
XX CC (expressing the protein), the extracellular matrix proteins (including
XX CC their fragments, epitopes and homologues), an isolated antibody that
XX CC binds specifically to the protein, diagnosing a pathological condition or
XX CC susceptibility to a pathological condition (comprising determining the
XX CC presence or absence of a mutation in the nucleic acid and diagnosing a
XX CC condition based on the presence or absence of the mutation), diagnosing a
XX CC pathological condition or susceptibility to a pathological condition
XX CC (comprising determining the presence or amount of expression of the
XX CC protein in a biological sample and diagnosing a condition based on the
XX CC presence or amount of expression of the protein), preventing, treating or
XX CC ameliorating a medical condition by administering the nucleic acid or
XX CC protein to a mammalian subject, identifying a binding partner to the
XX CC protein, the gene corresponding to the cDNA sequence, and identifying an
XX CC activity in a biological assay (comprising expressing the nucleic acid in
XX CC a cell, isolating the supernatant, detecting an activity in a biological
XX CC assay and identifying the protein in the supernatant having the
XX CC activity). The nucleic acids and proteins display the following
XX CC activities: Cytostatic, antibacterial, Virucide, Neuroprotective,
XX CC Gynaecological, Gastrointestinal-Gen, Cardiant, Cardiovascular-Gen,
XX CC Nephrologic, Antiinflammatory, Muscular-Gen, Respiratory-Gen,
XX CC Immunosuppressive, Cerebroprotective, Vasootropic, Neurotropic,

PT comprises a nucleotide sequence.
PR
XX
XX Claim 1; SEQ ID NO 1246; 0pp; English.
PS
XX The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a bioclip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182566A1, for which no sequence data was published

XX
XX Claim 1; SEQ ID NO 23900; 21pp + Sequence Listing; English.
PS
XX
XX The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signaling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pcr_sequences

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1148; 245pp; English.
PS
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a bioclip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or

CC leukemia) or a propensity to carcinoma by determination of the sequence
 CC of a CA gene, or by determination of CA gene expression in particular
 CC tissues. CA nucleic acids, proteins and antibodies are also useful as
 CC therapeutic agents and in screening and evaluating drug candidates. The
 CC present sequence represents a specifically claimed human CA nucleic acid
 CC sequence of the invention. Note: The complete sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pcc_sequences.

 XX
 CC The invention relates to an isolated nucleic acid comprising at least 10
 CC contiguous nucleotides of any of the 233 polynucleotide sequences given
 CC in the specification, or its complement. The nucleic acids encode cancer-
 CC associated proteins. Also included are an expression vector comprising
 CC the isolated nucleic acid cited above, a host cell comprising the above
 CC recombinant nucleic acid or expression vector, a microarray for detecting
 CC a cancer-associated (CA) nucleic acid comprising at least one probe
 CC comprising at least 10 contiguous nucleotides of any of the above-
 CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
 CC an open reading frame of a CA sequence selected from any of the 95
 CC polynucleotide sequences as mentioned in the specification, or its
 CC complement), an isolated antibody, (or its antigen binding fragment) that
 CC binds to the above polypeptide, a hybridoma that produces the above
 CC monoclonal antibody, a pharmaceutical composition comprising the above
 CC antibody and a pharmaceutical excipient, a kit for detecting cancer
 CC cells (comprising the antibody cited above, methods for diagnosing cancer
 CC or for detecting the presence or absence of cancer cells in an
 CC individual, a method for inhibiting growth of cancer cells in an
 CC individual, a method for delivering a therapeutic agent to cancer cells
 CC in an individual, an electronic library comprising the above
 CC polynucleotide or polypeptide (or their fragments), methods of screening
 CC for anticancer activity or for a bioactive agent capable of modulating
 CC the activity of a CA protein (CAP), methods for detecting cancer
 CC associated with expression of a polypeptide in a test cell sample, a
 CC method for treating cancers and a method for inhibiting the expression of
 CC CA gene in a cell. The composition and methods are useful for detecting,
 CC diagnosing, preventing and treating cancers, especially lymphoma and
 CC leukemia. These may also be used in screening for agents that modulate
 CC cancer. The present sequence is a human CAP genomic sequence. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

XX Claim 1; SEQ ID NO 73; 29pp; English.
XX
XX The invention relates to new recombinant nucleic acids. The invention
CC also relates to a host cell comprising a recombinant nucleic acid or
CC expression vector, an expression vector comprising a recombinant nucleic
```

```
CC acid, a recombinant protein, a method of screening for drug candidates, a
CC method of screening for a bioactive agent capable of binding to a
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
CC method of screening for a bioactive agent capable of modulating the
CC activity of a CAP, a method of evaluating the effect of a candidate
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
CC the activity of a CAP, a method of treating carcinomas, a method of
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
CC propensity to carcinoma. A method of evaluating the effect of a candidate
CC carcinoma drug comprises administering the drug to a patient, removing a
CC cell sample from the patient and determining alterations in the
CC expression or activation of a gene comprising the nucleotide sequence. A
CC method of diagnosing carcinoma comprises determining the expression of
CC one or more genes comprising the nucleic acid sequence in a first tissue
CC type of a first individual and comparing the expression of the gene from
CC a second normal tissue type from the first individual or a second
CC unaffected individual, where a difference in the expression indicates
CC that the first individual has carcinoma. A method of inhibiting the
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
CC carcinomas comprises administering to a patient an inhibitor of CAP.
CC Neutralising the effect of a CAP comprises contacting an agent specific
CC for the CAP. The polypeptide specifically binds to the protein encoded by
CC the nucleic acid. It comprises an antibody that specifically binds to the
CC protein encoded by the nucleic acid. The nucleic acids are useful for
CC preparing a composition for diagnosing or treating carcinoma e.g.,
CC leukemia or lymphoma. This sequence represents a murine carcinoma
CC associated (CA) nucleic acid of the invention. Note: The sequence data
CC for this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

XX PT Nucleic acid array useful for detecting cancer associated nucleic acid,
XX PS comprises two or more nucleic acid probes.
XX PS Disclosure; SEQ ID NO 70; 198pp; English.
XX CC The invention relates to a nucleic acid array for detecting a cancer
XX CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
XX CC The invention also relates to a peptide array comprising two or more
XX CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
XX CC that binds to a polypeptide, an isolated antibody or its fragment which
XX CC binds to a polypeptide, which is prepared by immunizing a host animal
XX CC with a composition comprising the polypeptide or its antigen binding
XX CC fragment and collecting cells from the host expressing antibodies against
XX CC the antigen or its antigen binding fragment, a composition comprising the
XX CC antibody and a carrier, a method of screening for anticancer activity, a
XX CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
XX CC method of treating cancer and a method of inhibiting expression of a CA
XX CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
XX CC nucleic acids. The antibody is useful for detecting the presence or
XX CC absence of cancer cells in an individual which involves contacting cells
XX CC from the individual with the antibody and detecting a complex of a CA
XX CC protein from the cancer cells and the antibody, where the detection of
XX CC the complex correlates with the presence of cancer cells in the
XX CC individual. The composition is useful for inhibiting growth of cancer
XX CC cells in an individual or for delivering a therapeutic agent to cancer
XX CC cells in an individual. The invention is also useful for diagnosing
XX CC cancer, for treating cancer and for inhibiting expression of a CA gene in
XX CC a cell. This sequence represents human cancer-associated genomic DNA of
XX CC the invention.

XX PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
XX PS comprises a nucleotide sequence.
XX PS Claim 1, SEQ ID NO 484; 0pp; English.
XX CC The present invention relates to novel DNA and protein sequences which
XX CC are associated with carcinomas. The sequences are useful for: (i) for
XX CC screening drug candidates; (ii) for screening of bioactive agent capable
XX CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
XX CC a bioactive agent capable of modulating the activity of CAP; (iv) for
XX CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
XX CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
XX CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
XX CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
XX CC determining Carcinoma Associated (CA) gene copy number. In addition, the
XX CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
XX CC carcinoma including lymphoma. The present sequence is one such CA coding
XX CC sequence. Note: This patent is an equivalent to basic patent

 XX
 PT PTAN protein, and sequences encoding them, used for diagnosing and
 PT treating cancers, especially breast and prostate cancers.
 XX
 PS Example 1; Page 31; 71pp; English.
 CC This sequence represents a primer used in the isolation of cDNA fragments
 CC of the PTAN (testis specific protein expressed in prostate cancer) gene.
 CC PTAN is expressed in 3 isoforms PTAN-1, 2, and 3. The PTAN gene is
 CC located on chromosome 1q22. PTAN is overexpressed in prostate cancer, and
 CC has a testis specific expression pattern in adult tissues. PTAN shows no
 CC homology to any known gene. PTAN can be used in methods for the diagnosis
 CC of cancer, especially prostate or breast cancer, where the normal tissue
 CC samples are prostate tissue, or breast tissue, bone tissue, lymphatic
 CC tissue, serum, blood, or urine. A vector containing the PTAN nucleotide
 CC sequence, a vaccine composition targeting PTAN, PTAN, ribozymes specific
 CC for PTAN mRNA and antisense sequences, can be used to treat cancer,
 CC especially breast and prostate cancers. Cancer development can be
 CC inhibited by a vaccine composition targeting PTAN

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998). cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda PUC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web

site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further details.

/lab_host="DH10B"
/clone_lib="NIA Mouse Osteoblast cDNA Library (long)"
/notes="Vector: pSPORT1 (Invitrogen); Site 1: SalI; Site 2:
NotI. Mouse cDNA project by the Laboratory of Genetics,
National Institute on Aging (NIA), Intramural Research
Program, NIH (http://1gsun.grc.nia.nih.gov/cDNA). This is
a long-transcript enriched cDNA library (Ref. Genome Res.
11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were
obtained from Dr. Akihito Umezawa (Keio University School
of Medicine, Japan). Double-stranded cDNAs were
synthesized with an oligo(dT) primer [Invitrogen:
5'-TGACTAGTTCATGATCGAGCGCGCCCTTTTCTTTTCTT-3'] from
2.1 ug of total RNA, treated with T4 DNA polymerase, and
purified by ethanol-precipitation. The cDNAs were ligated
to lone-linker L1-SalI, purified by phenol/chloroform, and
separated from free linkers by Centricon 100. Then, the
cDNAs were amplified by long-range high fidelity PCR using
Ex Taq polymerase (Takara) with a primer Sal4-S. The
products were purified by phenol/chloroform and Centricon
100. The cDNAs were digested with SalI and NotI enzymes
and cloned into SalI/NotI site of pSPORT1 plasmid vector.
The DH10B E. coli host was transformed with the ligation
mixture by the standard chemical method. The average
insert size is about 3.0 kb. The library was constructed
by Yulan Piao (NIA)."

 /note="Vector: PWD42nv, Purified genomic DNA from M.
 musculus C57BL/6J (female) was obtained from the Jackson
 Laboratory Mouse DNA Resource
 (http://www.jax.org/resources/documents/dnares/). The DNA
 was hydrodynamically sheared by repeated passage through a
 0.005 inch orifice at constant velocity. The sheared DNA
 was blunt end-repaired with T4 DNA polymerase and T4
 polynucleotide kinase. Adaptor oligonucleotides were
 ligated to the blunt ends in high molar excess. The
 adaptor DNA was purified and size-selected for a 9.5 to
 10.5 kb range using preparative agarose gel
 electrophoresis. Vector DNA was prepared from a derivative
 of pMD2 (g14732114|gb|AF129972.1), a copy-number
 inducible derivative of plasmid R1. The vector was ligated
 with adaptors complementary to the insert adaptors and
 purified. The sheared, adaptor mouse DNA was annealed to
 adaptor vector DNA, and transformed into
 chemically-competent E. coli XL10-Gold (Stratagene) cells
 and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
